

Hauptreferent:

Prof. Dr.-Ing. U. Nackenhorst

Korreferent:

*Univ.-Prof. Dr.-Ing. habil.
Daniel Balzani*

Doktorand:

M.Sc. Niraj Kumar Jha

Modeling and Numerical Simulation
for the Prediction of the Fatigue Strength of
Airsprings

Von der Fakultät für
Bauingenieurwesen
und Geodäsie der
Gottfried Wilhelm Leibniz
Universität Hannover

zur Erlangung des Grades
eines

Doktor-Ingenieurs

genehmigte Dissertation von

M.Sc. Niraj Kumar Jha

Hannover 2018

Tag der Einreichung:

10.01.2018

Tag der mündl. Prüfung:

16.03.2018

**Institut für
Baumechanik
und Numerische
Mechanik**

Contents

List of Figures	IV
List of Tables	IX
1. Introduction	1
1.1. Motivation and Background	2
1.1.1. <i>Damage Detection in Composites</i>	2
1.1.2. <i>Hierarchy of Airspring Structure</i>	4
1.2. State-of-the-Art Review on Fatigue of Rubber and Cord-Rubber Composites	7
1.2.1. <i>Post-Processing Based Tool</i>	8
1.2.2. <i>1 - ζ and Non-Local Approaches to Fatigue</i>	11
1.2.3. <i>Fracture Mechanics Approach</i>	14
1.3. Scope and Objectives of the Research	17
1.4. Outlook	18
2. Nonlinear Continuum Mechanics	19
2.1. Kinematics	19
2.1.1. <i>Deformation</i>	19
2.1.2. <i>Strain Measures and Strain Rate</i>	20
2.1.3. <i>Stress Definition</i>	21
2.2. Fundamental Laws of Thermodynamics	22
2.2.1. <i>Conservation of Mass</i>	22
2.2.2. <i>Conservation of Linear and Angular Momentum</i>	23
2.2.3. <i>Conservation of Energy</i>	23
2.3. On the Clausius-Duhem Inequality and the Second law of Ther- modynamics	25
3. Constitutive Modelling of Cord-Reinforced Rubber Airspring	27
3.1. General Remarks on Constitutive Modeling	28
3.2. Hyperelasticity	28
3.2.1. <i>Generalized Hyperelastic Model</i>	29
3.2.2. <i>Incorporation of Damage in Constitutive Laws</i>	33
3.3. Finite-Strain Viscoelastic Model	39
3.3.1. <i>Maxwell Chain Model</i>	39
3.3.2. <i>Incorporation of Damage into the Constitutive Model</i>	41
3.4. Summary and Conclusions	45
4. Modeling of Gradient-Enhanced Continua	47
4.1. Introduction	47
4.2. Summary of the Constitutive Model	47
4.2.1. <i>Constitutive Theory</i>	47

4.2.2.	<i>Governing Differential Equations</i>	49
4.2.3.	<i>Finite Element Implementation</i>	49
4.2.4.	<i>Finite Element Discretization</i>	51
4.2.5.	<i>User Element Visualization in Abaqus</i>	55
4.3.	Numerical Example	56
4.3.1.	<i>Simulation with Hyperelastic and Viscoelastic Damage Model</i>	56
4.3.2.	<i>Simulation with Gradient-Enhanced Damage Model</i>	56
4.4.	Model Calibration	60
4.5.	Conclusive Remarks	63
5.	Quasi-static Strength Analysis of an Airspring	65
5.1.	Introduction	66
5.1.1.	<i>Existing Airspring Modeling Technique</i>	66
5.1.2.	<i>Global-Local Analysis</i>	66
5.2.	Averaging Methods	67
5.3.	Identification of Potential Damage Initiation Locations	68
5.3.1.	<i>The Mesoscopic Boundary Value Problem</i>	70
5.3.2.	<i>Effect of RVE / Sub-Model Size</i>	70
5.3.3.	<i>Stiffness Degradation</i>	72
5.3.4.	<i>Dissipated Energy Density</i>	73
5.4.	Application to Global Model and Extension to Loading Ratio Effect	75
5.4.1.	<i>Numerical Example</i>	75
5.4.2.	<i>Effect of Loading Ratio</i>	76
5.5.	Summary and Conclusions	78
6.	Constitutive Modelling of the Interface	79
6.1.	Statement of Problem	79
6.2.	Formulation of the Model	81
6.2.1.	<i>Integration Algorithm for the Modified von Mises model</i>	82
6.3.	Numerical Example	86
6.3.1.	<i>Interface Debonding</i>	86
6.3.2.	<i>Parameteric Study</i>	88
6.3.3.	<i>Convergence Study</i>	89
6.4.	Progressive Damage Modelling at Mesoscale - Modeling of Multiple Damage Events	91
6.5.	Summary and Conclusions	96
7.	Framework for an Anisotropic Hyperelasticity and Simulation of a Residually Stressed Airsprings Under Damage	97
7.1.	Introduction	97
7.2.	Anisotropic Free Energy	98
7.2.1.	<i>Constitutive Model of Peng</i>	99
7.2.2.	<i>Constitutive Model of Balzani</i>	101
7.3.	<i>Virtual Experiment for a Cord-Reinforced Rubber Material</i>	102
7.4.	Incorporation of Residual Stresses	104
7.4.1.	<i>Constitutive Formulation</i>	105
7.4.2.	<i>The Damage Model</i>	106

7.5. Application to Airspring and Extension of the Constitutive Model	106
7.5.1. <i>Application to an Air-Spring System - Virtual Test</i>	107
7.5.2. <i>Extension to Anisotropic Material Model</i>	109
7.6. Summary and Conclusions	110
8. Conclusions	113
