

**NON-PARAMETRIC ANALYSIS AND MODELLING OF
FOULING DATA IN HEAT EXCHANGERS**

A Dissertation accepted by the
Faculty of Energy-, Process- and Bio-Engineering of the University of Stuttgart
in Fulfillment of the Requirements
for the Degree of Doctor of Engineering Sciences (Dr.-Ing.)

by

ALIREZA MIRSADRAEE

born in Mashhad, Iran
August 25, 1984

Supervisor: Apl. Prof. Dr.-Ing. Klaus Spindler
Co-Referee: Univ.-Prof. Dr. techn. Günter Scheffknecht

Date of Oral Examination: 21. Dec. 2017

Institute for Thermodynamics and Thermal Engineering
of the University of Stuttgart

2018

CONTENTS

DEDICATION	i
ABSTRACT	iii
ZUSAMMENFASSUNG	vii
ACKNOWLEDGEMENTS	xi
CONTENTS	xiii
LIST OF FIGURES	xvii
LIST OF TABLES	xxiii
NOMENCLATURE	xxv
1 INTRODUCTION	1
1.1 Fouling Propensity in Crude Preheat Trains (CPTs)	3
1.2 Prediction of Crude Oil Fouling	4
1.3 Objectives of Study	6
1.4 Scope of Present Study	7
2 LITERATURE SURVEY	9
2.1 Sequence of Fouling in Heat Exchangers	9
2.1.1 Initiation or Induction Period	9
2.1.2 Mass Transport	10
2.1.3 Deposition	10
2.1.4 Removal or Auto-retardation	11
2.1.5 Ageing	12
2.2 Various Fouling Trends	12
2.3 Fouling Mechanisms	13
2.3.1 Chemical Reaction Fouling	13
2.3.2 Crystallization Fouling	14
2.3.3 Corrosion Fouling	15
2.3.4 Biofouling	15
2.3.5 Particulate Fouling	15
2.3.6 Mixed Fouling	16
2.4 Removal Mechanisms	16
2.4.1 Shear Stress	16
2.4.2 Turbulent Burst	17
2.4.3 Suppressing Asphaltene Adhesion	17
2.5 Approximate Influence of Operating Conditions on the Formation of Fouling Layer	17
2.5.1 Surface Temperature	17
2.5.2 Bulk Velocity	18

2.5.3	Bulk Temperature	19
2.5.4	Surface Substrate	19
2.5.5	Chemical Properties of Crude Oil	19
2.6	General Fouling Mechanism in CPTs	20
3	PARAMETRIC MODELLING OF CRUDE OIL FOULING IN PREHEAT TRAINS	21
3.1	Introduction	21
3.2	Calculation of Fouling Resistance	23
3.3	Governing Equations	23
3.3.1	Energy Equation for the Bulk Fluid	23
3.3.2	Energy Equation for the Tube Wall under Clean Conditions	24
3.3.3	Energy Equation for the Tube Wall under Fouling Conditions	24
3.4	Crude Oil Threshold Fouling Models in CPTs	26
3.4.1	Ebert-Panchal Model	26
3.4.2	Polley Model	27
3.4.3	Nasr-Givi Model	27
3.4.4	Experimental Set-up for Investigation of Fouling Propensity in CPTs	27
3.4.5	Analysis of the Data-bank for Implementing Artificial Neural Networks	27
4	NON-PARAMETRIC MODELLING OF FOULING PROPENSITY IN CPTs	31
4.1	Introduction to Non-Parametric Modelling	32
4.2	Kalman Filter as a Universal Estimator of the Fouling Propensity in CPTs	32
4.2.1	Mathematical Principles of Discrete Kalman Filter	33
4.2.2	Implementation of Kalman Filter for Estimation of Fouling Propensity in CPTs	41
4.2.3	Adapting the Kalman Filter	42
4.2.4	Process and Measurement Noise Covariance	43
4.2.5	Adaptive Estimation of Measurement Noise Covariance	54
4.2.6	Adaptive Estimation of Process Noise Covariance	58
4.3	Modelling of Fouling Propensity in CPTs Using Artificial Neural Networks (ANNs)	61
4.3.1	Principles of Neural Networks	63
4.3.2	Network Architectures	63
4.3.3	Training the Neural Networks	65
4.3.4	Implementation of Neural Networks	67
4.3.5	Estimation of Fouling Resistance Using Artificial Neural Networks Based on the Fouling Trend of the Heat Exchanger	71
4.3.6	Estimation of Fouling Resistance Using Artificial Neural Networks Based on the Operating Conditions of the Heat Exchanger	79
4.3.7	Estimation of Fouling Resistance Using Artificial Neural Networks Based on Operating Conditions and the Fouling State of the Heat Exchanger	84
4.3.8	Classification of Fouling Trends Based on the Initial Operating Conditions	89
4.4	Input Analysis and Input Discrimination	93
4.5	Input Discrimination and the Performance of Various Neural Network Architectures	93
4.5.1	Connection Weights Method	94
4.5.2	Partial Derivatives (PaD) Method	95
4.5.3	Input Perturbation Method	97

4.5.4	Profile Analysis Method	99
4.5.5	Conclusions	101
4.6	Parametric Assessment of the Developed Neural Networks Using Partial Derivative Method	101
5	PREDICTION OF CRITICAL STATUS OF HEAT EXCHANGERS	107
5.1	Prediction of Fouling Trend Based on Initial Fouling Rate and Initial Rate of Fouling Rate	107
5.2	Other Case Studies	111
6	CONCLUSIONS AND FUTURE WORK	115
6.1	Future Works	118
A	NORMALIZATION METHODS	121
A.1	Min-Max Normalization	121
A.2	Gaussian Normalization	122
B	TRAINING ALGORITHMS	125
B.1	Levenberg-Marquardt back-propagation	125
B.2	Gradient descent with adaptive learning rate back-propagation	125
B.3	Gradient descent with momentum back-propagation	125
B.4	Gradient descent with momentum and adaptive learning rate back- propagation	126
