

Total emissivity charts for H₂O, CO₂ and CO from low to high pressures

Dissertation

Zur Erlangung des Doktorgrades
der Ingenieurwissenschaften

vorgelegt von

Dipl.-Ing. Michael Alberti

aus Schwelm

genehmigt von der Fakultät für Energie- und Wirtschaftswissenschaften
der Technischen Universität Clausthal

Tag der mündlichen Prüfung: 06.06.2018

Contents

1	Introduction and Objectives	1
2	Fundamentals	3
2.1	Basic Laws	3
2.2	Radiative Transfer Equation	5
2.3	Absorption and Emission of Infrared Radiation by Gaseous Species	9
2.4	Spectra of Selected Molecules	17
3	Line-by-Line Model	25
3.1	Spectral Databases	25
3.2	Mathematical Description	29
3.3	Lineshape Profiles	32
3.4	Line cut-off criterion	45
3.5	Conclusions and Consequences for Engineering Applications	47
4	Validation of the Line-by-Line Model	49
4.1	Fast Fourier Transform Infrared Spectrometry	49
4.2	Smoothing High Resolution Spectra	57
4.3	Measurements used in this work	60
4.4	Gas Cell Measurements at Atmospheric Pressures	66
4.5	Conclusion	73
5	Total Emissivity Charts	75
5.1	Hottel's Emissivity Charts	75
5.2	Other works related to Emissivity Charts	81
6	Re-creation of the Emissivity Charts	89
6.1	Methodology of obtaining Emissivity Charts	89
6.2	Effect of Dissociation on the Emissivity	96
6.3	Standard Emissivities and Pressure Corrections	98
6.4	Overlap Corrections for binary mixtures	108
6.5	Overlap Corrections for ternary mixtures	121
6.6	Usage of the Charts	123
6.7	Accuracy of the Charts	127

6.8 Conclusion	132
7 Final Conclusions and Outlook	135
Bibliography	139
Appendices	155
A Solving Radiative Transfer Equation at Non-Homogeneous Conditions	157
B Numerical procedure for evaluating the Voigt profile	161
C Lineshape correction functions used in this work	163
D Total Emissivity Charts	167
E Overlap Correction Charts	191
Appended Publications	215
List of Author's Publications	223
