<i>Preface to the Second Edition</i>	v
<i>Preface to the First Edition</i>	vii
1 Introduction	1
1.1 Dynamical Systems	2
1.1.1 Phase Space and Orbits	2
1.1.2 Parameters and Bifurcation of Dynamical Behavior	3
1.1.3 Examples of Dynamical Systems	3
1.2 Symbolic Dynamics as Coarse-Grained Description of Dynamics	6
1.2.1 Fine-Grained and Coarse-Grained Descriptions	7
1.2.2 Symbolic Dynamics as the Simplest Dynamics	7
1.3 Abstract versus Applied Symbolic Dynamics	9
1.3.1 Abstract Symbolic Dynamics	9
1.3.2 Applied Symbolic Dynamics	10
1.4 Literature on Symbolic Dynamics	12
2 Symbolic Dynamics of Unimodal Maps	15
2.1 Symbolic Sequences in Unimodal Maps	17
2.1.1 Numerical Orbit and Symbolic Sequence	18
2.1.2 Symbolic Sequence and Functional Composition	24
2.1.3 The Word-Lifting Technique	26
2.2 The Quadratic Map	27
2.2.1 An Over-Simplified Population Model	28
2.2.2 Bifurcation Diagram of the Quadratic Map	30
2.2.3 Dark Lines in the Bifurcation Diagram	35

2.3	Ordering of Symbolic Sequences and the Admissibility Condition	41
2.3.1	Property of Monotone Functions	42
2.3.2	The Ordering Rule	42
2.3.3	Dynamical Invariant Range and Kneading Sequence	47
2.3.4	The Admissibility Condition	48
2.4	The Periodic Window Theorem	51
2.4.1	The Periodic Window Theorem	51
2.4.2	Construction of Median Words	55
2.4.3	The MSS Table of Kneading Sequences	56
2.4.4	Nomenclature of Unstable Periodic Orbits	57
2.5	Composition Rules	59
2.5.1	The *-Composition	60
2.5.2	Generalized Composition Rule	64
2.5.3	Proof of the Generalized Composition Rule	67
2.5.4	Applications of the Generalized Composition Rule	70
2.5.5	Further Remarks on Composition Rules	73
2.6	Coarse-Grained Chaos	76
2.6.1	Chaos in the Surjective Unimodal Map	76
2.6.2	Chaos in $\rho\lambda^\infty$ Maps	83
2.7	Topological Entropy	90
2.8	Piecewise Linear Maps and Metric Representation of Symbolic Sequences	92
2.8.1	The Tent Map and Shift Map	93
2.8.2	The λ -Expansion of Real Numbers	94
2.8.3	Characteristic Function of the Kneading Sequence	95
2.8.4	Mapping of Subintervals and the Stefan Matrix	96
2.8.5	Markov Partitions and Generating Partitions	103
2.8.6	Metric Representation of Symbolic Sequences	106
2.8.7	Piecewise Linear Expanding Map	111
3	Maps with Multiple Critical Points	113
3.1	General Discussion	115
3.1.1	The Ordering Rule	115
3.1.2	Construction of a Map from a Given Kneading Sequence	116
3.2	The Antisymmetric Cubic Map	117
3.2.1	Symbolic Sequences and Their Ordering	120

3.2.2	Admissibility Conditions	121
3.2.3	Generation of Superstable Median Words	123
3.3	Symmetry Breaking and Restoration	130
3.3.1	Symmetry Breaking of Symmetric Orbits	132
3.3.2	Analysis of Symmetry Restoration	135
3.4	The Gap Map	137
3.4.1	The Kneading Plane	140
3.4.2	Contacts of Even-Odd Type	143
3.4.3	Self-Similar Structure in the Kneading Plane	145
3.4.4	Criterion for Topological Chaos	148
3.5	The Lorenz-Like Map	152
3.5.1	Ordering Rule and Admissibility Conditions	152
3.5.2	Construction of the Kneading Plane	153
3.5.3	Contacts and Intersections	154
3.5.4	Farey and Doubling Transformations	155
3.6	General Cubic Maps	156
3.6.1	Skeleton, Bones and Joints in Kneading Plane	158
3.6.2	The Construction of the Kneading Plane	162
3.6.3	The *-Composition Rules	166
3.6.4	The Down-Up-Down Type Cubic Map	167
3.7	The Sine-Square Map	171
3.7.1	Symbolic Sequences and Word-Lifting Technique	172
3.7.2	Ordering Rule and Admissibility Conditions	173
3.7.3	Generation of Kneading Sequences	175
3.7.4	Joints and Bones in the Kneading Plane	176
3.7.5	Skeleton of Superstable Orbits and Existence of Topological Chaos	180
3.8	The Lorenz-Sparrow Maps	182
3.8.1	Ordering and Admissibility of Symbolic Sequences	182
3.8.2	Generation of Compatible Kneading Pairs	185
3.8.3	Generation of Admissible Sequences for a Given Kneading Pair	186
3.8.4	Metric Representation of Symbolic Sequences	188
3.8.5	One-Parameter Limits of Lorenz-Sparrow Maps	189
3.9	Piecewise Linear Maps	190
3.9.1	Piecewise Linear Maps with Multiple Critical Points	190
3.9.2	Kneading Determinants	192

5.6.2	Ordering of Symbolic Sequences	324
5.6.3	Symbolic Plane and Admissibility of Symbolic Sequences	326
5.7	The Stadium Billiard Problem	329
5.7.1	A Coding Based on Lifting	332
5.7.2	Relation to Other Codings	335
5.7.3	The Half-Stadium	337
5.7.4	Summary	338
6	Application to Ordinary Differential Equations	341
6.1	General Discussion	343
6.1.1	Three Types of ODEs	343
6.1.2	On Numerical Integration of Differential Equations	345
6.1.3	Numerical Calculation of the Poincaré Maps	347
6.2	The Periodically Forced Brusselator	351
6.2.1	The Brusselator Viewed from The Standard Map	354
6.2.2	Transition from Annular to Interval Dynamics	358
6.2.3	Symbolic Analysis of Interval Dynamics	360
6.3	The Lorenz Equations	367
6.3.1	Summary of Known Properties	369
6.3.2	Construction of Poincaré and Return Maps	372
6.3.3	One-Dimensional Symbolic Dynamics Analysis	374
6.3.4	Symbolic Dynamics of the 2D Poincaré Maps	378
6.3.5	Stable Periodic Orbits	386
6.3.6	Concluding Remarks	393
6.4	Summary of Other ODE Systems	395
6.4.1	The Driven Two-Well Duffing Equation	395
6.4.2	The NMR-Laser Model	396
7	Counting the Number of Periodic Orbits	399
7.1	Periodic versus Chaotic Regimes	400
7.1.1	Stable Versus Unstable Periods in 1D Maps	401
7.1.2	Notations and Summary of Results	402
7.1.3	A Few Number Theory Notations and Functions	405
7.2	Number of Periodic Orbits in a Class of One-Parameter Maps	407
7.2.1	Number of Admissible Words in Symbolic Dynamics	407

7.2.2	Number of Tangent and Period-Doubling Bifurcations	408
7.2.3	Recursion Formula for the Total Number of Periods	411
7.2.4	Symmetry Types of Periodic Sequences	412
7.2.5	Explicit Solutions to the Recurrence Relations	416
7.2.6	Finite Lambda Auto-Expansion of Real Numbers . .	417
7.3	Other Aspects of the Counting Problem	419
7.3.1	The Number of Roots of the “Dark Line” Equation .	419
7.3.2	Number of Saddle Nodes in Forming Smale Horseshoe	420
7.3.3	Number of Solutions of Renormalization Group Equations	420
7.4	Counting Formulae for General Continuous Maps	422
7.5	Number of Periods in Maps with Discontinuity	424
7.5.1	Number of Periods in the Gap Map	424
7.5.2	Number of Periods in the Lorenz-Like Map	426
7.6	Summary of the Counting Problem	428
7.7	Cycle Expansion for Topological Entropy	429
8	Symbolic Dynamics and Grammatical Complexity	433
8.1	Formal Languages and Their Complexity	434
8.1.1	Formal Language	435
8.1.2	Chomsky Hierarchy of Grammatical Complexity . . .	436
8.1.3	The L-System	438
8.2	Regular Language and Finite Automaton	438
8.2.1	Finite Automaton	439
8.2.2	Regular Language	440
8.2.3	Stefan Matrix as Transfer Function for Automaton .	441
8.3	Beyond Regular Languages	444
8.3.1	Feigenbaum and Generalized Feigenbaum Limiting Sets	445
8.3.2	Even and Odd Fibonacci Sequences	446
8.3.3	Odd Maximal Primitive Prefixes and Kneading Map	448
8.3.4	Even Maximal Primitive Prefixes and Distinct Excluded Blocks	451
8.4	Summary of Results	452

9	Symbolic Dynamics and Knot Theory	453
9.1	Knots and Links	454
9.2	Knots and Links from Unimodal Maps	456
9.3	Linking Numbers	460
9.4	Discussion	462
10	Appendix	465
A.1	Program to Generate Admissible Sequences	465
A.2	Program to Draw Dynamical Foliations of a Two-Dimensional Map	471
A.3	A Greedy Program For Determining Partition Line	474
	<i>References</i>	477
	<i>Index</i>	495
