Content

Inhaltsverzeichnis

1	Introduction.....	1
2	State of the Art.....	3
2.1	The milling process.....	3
2.1.1	Kinematics.....	3
2.1.2	Thermal driven tool wear.....	6
2.1.3	Surface integrity.....	8
2.2	Measurement of temperatures in interrupted cutting.....	10
2.2.1	Thermocouple method.....	10
2.2.2	Thermography.....	14
2.2.3	Pyrometry.....	16
2.3	Analytical models for temperatures in the cutting process.....	20
2.3.1	Analytical models for steady-state temperatures in orthogonal cutting.....	20
2.3.2	Analytical models for transient and steady-state temperature fields in interrupted cutting.....	26
2.4	Conclusion from the state of the art.....	34
3	Objectives and scientific approach.....	37
4	Heat flow distribution in orthogonal cutting.....	41
4.1	Experimental setup and sensors.....	41
4.2	Measuring the heat flow into the chip.....	44
4.3	Measuring the heat flow into the workpiece.....	47
4.4	Measuring the heat flow into the tool.....	50
4.4.1	Validation of analytical temperature model.....	56
4.4.2	Validation of numerical temperature model.....	60
4.5	Intermediate conclusion.....	65
5	Heat flow distribution in the milling process.....	67
5.1	Modeling the heat flow distribution.....	67
5.2	Validation the heat flow distribution.....	72
5.2.1	Experimental setup and sensors.....	72
5.2.2	Mechanical process power.....	77
5.2.3	Heat flow into the chip.....	80
5.2.4	Heat flow into the workpiece.....	84
5.2.5	Heat flow into the tool.....	91
5.3	Intermediate conclusion.....	99
6	Temperature fields in the milling process.....	101
6.1	Modeling and validation of steady-state temperature fields in the workpiece	101

6.2 Modeling and validation of transient temperature fields in the tool ...	108
6.3 Intermediate Conclusion and Assessment.....	118
7 Summary and outlook	119
7.1 Summary	119
7.2 Outlook	122
Zusammenfassung und Ausblick	124
8 Appendix	131
8.1 Characterization of tool and workpiece materials	131
8.2 Orthogonal cutting: Comparison between measurement and analytical simulation.....	136
8.3 Regression of specific heat inputs	142
8.4 Transient temperature fields in the tool.....	144
9 References	149
