Matching Supply with Demand

An Introduction to Operations Management

Fourth Edition

Gérard Cachon
The Wharton School,
University of Pennsylvania

Christian Terwiesch
The Wharton School,
University of Pennsylvania
Table of Contents

Chapter 1
Introduction 1
  1.1 Learning Objectives and Framework 3
  1.2 Road Map of the Book 6

Chapter 2
The Process View of the Organization 10
  2.1 Presbyterian Hospital in Philadelphia 10
  2.2 Three Measures of Process Performance 14
  2.3 Little’s Law 16
  2.4 Inventory Turns and Inventory Costs 19
  2.5 Five Reasons to Hold Inventory 23
    Pipeline Inventory 23
    Seasonal Inventory 24
    Cycle Inventory 25
    Decoupling Inventory/Buffers 26
    Safety Inventory 26
  2.6 The Product–Process Matrix 27

Chapter 3
Understanding the Supply Process:
Evaluating Process Capacity 33
  3.1 How to Draw a Process Flow Diagram 34
  3.2 Bottleneck, Process Capacity, and Flow Rate
      (Throughput) 39
  3.3 How Long Does It Take to Produce a Certain
      Amount of Supply? 41
  3.4 Process Utilization and Capacity Utilization 42
  3.5 Workload and Implied Utilization 44
  3.6 Multiple Types of Flow Units 45

Chapter 4
Estimating and Reducing Labor Costs 57
  4.1 Analyzing an Assembly Operation 57
  4.2 Time to Process a Quantity X Starting with an
      Empty Process 59
  4.3 Labor Content and Idle Time 61
  4.4 Increasing Capacity by Line Balancing 64
  4.5 Scale Up to Higher Volume 67
    Increasing Capacity by Replicating the Line 68
    Increasing Capacity by Selectively Adding
    Workers 68

Chapter 5
Batching and Other Flow Interruptions:
Setup Times and the Economic Order Quantity Model 81
  5.1 The Impact of Setups on Capacity 82
  5.2 Interaction between Batching and Inventory 85
  5.3 Choosing a Batch Size in the Presence of Setup Times 88
  5.4 Setup Times and Product Variety 91
  5.5 Setup Time Reduction 93
  5.6 Balancing Setup Costs with Inventory Costs:
      The EOQ Model 94
  5.7 Observations Related to the Economic Order Quantity 99

Chapter 6
The Link between Operations and Finance 109
  6.1 Paul Downs Cabinetmakers 110
  6.2 Building an ROIC Tree 111
  6.3 Valuing Operational Improvements 116
  6.4 Analyzing Operations Based on Financial Data 119

Chapter 7
Quality and Statistical Process Control 125
  7.1 The Statistical Process Control Framework 126
  7.2 Capability Analysis 128
    Determining a Capability Index 129
    Predicting the Probability of a Defect 132
    Setting a Variance Reduction Target 134
    Process Capability Summary and Extensions 135
  7.3 Conformance Analysis 135
  7.4 Investigating Assignable Causes 139
  7.5 Defects with Binary Outcomes: p-Charts 141
  7.6 Impact of Yields and Defects on Process Flow 141
    Rework 143
    Eliminating Flow Units from the Process 143

Increasing Capacity by Further Specializing Tasks 70
Chapter 8

Lean Operations and the Toyota Production System 149

8.1 The History of Toyota 149
8.2 TPS Framework 150
8.3 The Seven Sources of Waste 151
8.4 JIT: Matching Supply with Demand 155
   Achieve One-Unit-at-a-Time Flow 155
   Produce at the Rate of Customer Demand 155
   Implement Pull Systems 156
8.5 Quality Management 158
8.6 Exposing Problems through Inventory Reduction 159
8.7 Flexibility 160
8.8 Standardization of Work and Reduction of Variability 162
8.9 Human Resource Practices 163
8.10 Lean Transformation 165

Chapter 9

Variability and Its Impact on Process Performance: Waiting Time Problems 168

9.1 Motivating Example: A Somewhat Unrealistic Call Center 169
9.2 Variability: Where It Comes From and How It Can Be Measured 171
9.3 Analyzing an Arrival Process 173
   Stationary Arrivals 175
   Exponential Interarrival Times 177
   Nonexponential Interarrival Times 179
   Summary: Analyzing an Arrival Process 179
9.4 Processing Time Variability 179
9.5 Predicting the Average Waiting Time for the Case of One Resource 181
9.6 Predicting the Average Waiting Time for the Case of Multiple Resources 185
9.7 Service Levels in Waiting Time Problems 188
9.8 Economic Implications: Generating a Staffing Plan 189
9.9 Impact of Pooling: Economies of Scale 193
9.10 Reducing Variability 196
   Ways to Reduce Arrival Variability 196
   Ways to Reduce Processing Time Variability 197

Chapter 10

The Impact of Variability on Process Performance: Throughput Losses 205

10.1 Motivating Examples: Why Averages Do Not Work 205
10.2 Ambulance Diversion 206
10.3 Throughput Loss for a Simple Process 207
10.4 Customer Impatience and Throughput Loss 211
10.5 Several Resources with Variability in Sequence 213
   The Role of Buffers 214

Chapter 11

Scheduling to Prioritize Demand 220

11.1 Scheduling Timeline and Applications 221
11.2 Resource Scheduling—Shortest Processing Time 222
   Performance Measures 223
   First-Come-First-Served vs. Shortest Processing Time 224
   Limitations of Shortest Processing Time 228
11.3 Resource Scheduling with Priorities—Weighted Shortest Processing Time 230
11.4 Resource Scheduling with Due Dates—Earliest Due Date 232
11.5 Theory of Constraints 234
11.6 Reservations and Appointments 236
   Scheduling Appointments with Uncertain Processing Times 237
   No-Shows 239

Chapter 12

Project Management 245

12.1 Motivating Example 245
12.2 Critical Path Method 247
12.3 Computing Project Completion Time 248
12.4 Finding the Critical Path and Creating a Gantt Chart 249
12.5 Computing Slack Time 250
12.6 Dealing with Uncertainty 253
   Random Activity Times 253
   Potential Iteration/Rework Loops 256
   Decision Tree/Milestones/Exit Option 256
   Unknown Unknowns 257
12.7 How to Accelerate Projects 257
## Chapter 13

### Forecasting 261

13.1 Forecasting Framework 262  
13.2 Evaluating the Quality of a Forecast 266  
13.3 Eliminating Noise from Old Data 269  
13.4 Time Series Analysis—Trends 274  
13.5 Time Series Analysis—Seasonality 279  
13.6 Expert Panels and Subjective Forecasting 285  
13.7 Conclusion 287

### Naive Model 269  
### Moving Averages 270  
### Exponential Smoothing Method 271  
### Comparison of Methods 273

## Chapter 14

### Betting on Uncertain Demand: The Newsvendor Model 290

14.1 O’Neill Inc. 291  
14.2 The Newsvendor Model: Structure and Inputs 293  
14.3 How to Choose an Order Quantity 295  
14.4 Performance Measures 299  
14.5 How to Achieve a Service Objective 304  
14.6 How to Construct a Demand Forecast 304  
14.7 Managerial Lessons 309

### In-Stock and Stockout Probability 348  
### Expected On-Hand Inventory 350  
### Pipeline Inventory/Expected On-Order Inventory 351  
### Expected Back Order 351

## Chapter 15

### Assemble-to-Order, Make-to-Order, and Quick Response with Reactive Capacity 320

15.1 Evaluating and Minimizing the Newsvendor’s Demand–Supply Mismatch Cost 321  
15.2 When Is the Mismatch Cost High? 323  
15.3 Reducing Mismatch Costs with Make-to-Order 326  
15.4 Quick Response with Reactive Capacity 327

## Chapter 16

### Service Levels and Lead Times in Supply Chains: The Order-up-to Inventory Model 337

16.1 Medtronic’s Supply Chain 338  
16.2 The Order-up-to Model Design and Implementation 340  
16.3 The End-of-Period Inventory Level 343  
16.4 Choosing Demand Distributions 345  
16.5 Performance Measures 348  
16.6 Choosing an Order-up-to Level to Meet a Service Target 353  
16.7 Choosing an Appropriate Service Level 354  
16.8 Controlling Ordering Costs 357  
16.9 Managerial Insights 361

### Medtronic’s Field Inventory 369  
### Electronic Commerce 374

## Chapter 17

### Risk-Pooling Strategies to Reduce and Hedge Uncertainty 368

17.1 Location Pooling 368  
17.2 Product Pooling 375  
17.3 Lead Time Pooling: Consolidated Distribution and Delayed Differentiation 381  
17.4 Capacity Pooling with Flexible Manufacturing 389

## Chapter 18

### Revenue Management with Capacity Controls 402

18.1 Revenue Management and Margin Arithmetic 402  
18.2 Protection Levels and Booking Limits 404  
18.3 Overbooking 409  
18.4 Implementation of Revenue Management 412  
18.5 Demand Forecasting 412  
18.6 Dynamic Decisions 412  
18.7 Variability in Available Capacity 412
