Part I Overview

CHAPTER 1 Seismic structure along the South American subduction zone using satellite gravity data	3
Orlando Alvarez, Stefanie Pechuan, Mario Gimenez, Andrés Folguera	
1 Introduction.....	3
2 Data and method.....	5
2.1 Satellite GOCE gravity data	5
2.2 Reduction by topographic and sediments effect	5
2.3 Harmonic decomposition.....	5
3 Results and discussion	6
3.1 The Valdivia 1960 Mw=9.5 earthquake.....	6
3.2 The Maule segment.....	8
3.3 The central Chile segment	8
3.4 Northern Chile-southern Peru.....	11
3.5 Peru.....	13
3.6 Ecuador-Colombia.....	15
4 Concluding remarks.....	17
Acknowledgments	18
References.....	18
CHAPTER 2 Control of subduction erosion and sediment accretion processes on the trench curvature of the central Chilean margin	25
Eduardo Contreras-Reyes	
1 Introduction.....	25
2 Trench and margin curvature	27
3 Discussion.....	31
4 Summary.....	32
Acknowledgments	32
References.....	32
CHAPTER 3 Measuring dynamic topography in South America	35
Federico M. Dávila, Pilar Ávila, Federico Martina, Horacio N. Canelo, Julieta C. Nóbile, Gilda Collo, Francisco Sánchez Nassif, Miguel Ezpeleta	
1 Introduction.....	35
2 Geodynamic and tectonic setting.....	37

3	Theory, methods, and data	44
3.1	Global to continental residual topography	44
3.2	Local to regional residual topographic analysis	46
3.3	Dynamic topography	48
4	Results.....	48
4.1	Continental lithospheric scale analysis. Modern and ancient	48
4.2	Local residual estimations	51
5	Discussion, ongoing studies, and future perspectives.....	54
6	Conclusions.....	59
	Acknowledgments	60
	References.....	60
	Further reading.....	66

Part II Northern Andes

CHAPTER 4	Cenozoic tectonic evolution of the North Andes with constraints from volcanic ages, seismic reflection, and satellite geodesy	69
	James N. Kellogg, Gabriela Beatriz Franco Camelio, Héctor Mora-Páez	
1	Introduction.....	69
1.1	Flat subduction.....	69
1.2	Slab geometry	70
1.3	Arc-continent accretion and "escape"	70
2	Present tectonics of the North Andes (GPS vectors and profiles)	71
2.1	Nazca subduction and volcanic arc.....	71
2.2	Amagmatic Caribbean subduction and accretionary prism formation	74
2.3	Arc-continent collision	76
2.4	Margin-parallel "escape"	77
2.5	Margin-normal mountain building.....	78
3	Data sources and methodology	80
3.1	Radiometric ages for arc volcanics.....	80
3.2	Revised plate tectonic model	80
3.3	Earthquake hypocentral locations.....	84
4	Plate tectonic evolution of the North Andes	85
4.1	75Ma–45Ma, Previous work—Caribbean obduction—Western Cordillera	85
4.2	45Ma to 25Ma—Revised model—Farallon-Caribbean-North Andes triple junction.....	85
4.3	25Ma to Present—Revised model—Panama-Choco arc-continent collision	86
5	Discussion.....	88
5.1	Flat slab subduction, low heat flow, and thick-skinned basement tectonics.....	88

5.2 Panamá arc-North Andes collision: "broken indenter" and arc accretion..... 89
 5.3 Bucaramanga slab—Nazca or Caribbean? 91
6 Summary 92
 Acknowledgments 94
 Appendix: Supplementary material 94
 References..... 94

CHAPTER 5 Thermochronological constraints on Cenozoic exhumation along the southern Caribbean: The Santa Marta range, northern Colombia 103

Ana María Patiño, Mauricio Parra, Juan Carlos Ramírez, Edward R. Sobel, Johannes Glodny, Ariel Almendral, Sebastián Echeverri

1 Introduction..... 103
2 Geological setting 106
 2.1 Regional geological setting 106
 2.2 Local geological setting 107
3 Pre-existing thermochronological data 108
4 Methods 110
 4.1 Detrital fission-track and (U-Th)/He analyses in apatite 110
 4.2 One-dimensional exhumation rates 111
5 Results..... 113
 5.1 Catchment hypsometry and lithology 113
 5.2 Detrital thermochronology..... 114
 5.3 One-dimensional exhumation rates 117
 5.4 Thermokinematic modeling 118
6 Discussion 122
 6.1 Paleocene-Eocene (60–45Ma)..... 123
 6.2 Oligocene-Miocene (30–20Ma)..... 125
 6.3 Middle Miocene (16–10Ma)..... 125
7 Conclusions..... 126
 Acknowledgments 127
 Appendix: Supplementary material 127
 References..... 127

CHAPTER 6 Discriminating mechanisms for coarse clastic progradation in the Colombian foreland basin using detrital zircon double dating 133

Soty Odoh, Joel E. Saylor, Camilo Higuera, Peter Copeland, Thomas J. Lapen

1 Introduction..... 133
2 Geologic setting and regional geochronology 135

3	Depositional environments	139
3.1	Lithofacies associations	139
3.2	Lithostratigraphy.....	142
4	Detrital zircon geochronology and thermochronology	144
4.1	Methods	144
4.2	Results and interpretations.....	146
4.3	Interpreting changes in exhumation rate through lag-time analysis	151
5	Regional sediment provenance and exhumation.....	152
5.1	Maastrichtian-early Paleocene (Guaduas-Barco Formations)	152
5.2	Early Paleocene-early Eocene (Barco-Mirador Formations).....	154
5.3	Early Eocene-late Oligocene (Mirador Formation-C7 member).....	154
5.4	Late Oligocene-late Miocene (C7-lower Guayabo Formation).....	154
5.5	Late Miocene-Pliocene (lower-upper Guayabo Formation).....	155
5.6	Summary.....	155
6	Regional integration.....	155
6.1	Maastrichtian	156
6.2	Early Paleocene.....	156
6.3	Late Paleocene-early Eocene	158
6.4	Eocene.....	158
6.5	Oligocene.....	159
6.6	Miocene	160
6.7	Pliocene.....	161
7	Conclusion	161
	Acknowledgments	162
	Appendix: Supplementary material	163
	References.....	163

CHAPTER 7	Latest Triassic to Early Cretaceous tectonics of the Northern Andes: Geochronology, geochemistry, isotopic tracing, and thermochronology	173
	Richard A. Spikings, Ryan Cochrane, Cristian Vallejo, D. Villagomez, Roelant Van der Lelij, A. Paul, Wilfried Winkler	
1	Introduction.....	173
2	Geological framework	174
3	Geochronology	180
3.1	Latest Triassic to earliest Cretaceous intrusions: Cordillera real, Cordillera central, Sierra Nevada de Santa Marta, and the Santander Massif	180
3.2	Early Cretaceous magmatic and sedimentary rocks: Cordillera Real and Cordillera Central	182

4	Geochemistry	185
4.1	Latest Triassic-earliest Cretaceous granitoids	185
4.2	Early Cretaceous igneous rocks	187
5	Discussion	191
5.1	The tectonic setting during the latest Triassic-Jurassic (209–130Ma).....	191
5.2	The tectonic setting during the Early Cretaceous (145–115Ma).....	195
5.3	Compression during the Early Cretaceous	200
6	Conclusions.....	201
	Acknowledgments	202
	Appendix: Supplementary material	202
	References.....	202
	Further reading.....	208
CHAPTER 8	Late cretaceous to miocene stratigraphy and provenance of the coastal forearc and Western Cordillera of Ecuador: Evidence for accretion of a single oceanic plateau fragment	209
	Cristian Vallejo, Richard A. Spikings, Brian K. Horton, Leonard Luzieux, Christian Romero, Wilfried Winkler, Tonny B. Thomsen	
1	Introduction.....	209
2	Regional geology	210
3	The Western Cordillera and the allochthonous origin of the basement	213
3.1	The Pallatanga block.....	213
3.2	The Macuchi block	216
4	The coastal forearc and the Piñon block.....	217
4.1	Late Cretaceous to Miocene stratigraphy of the central and southern part of the coastal forearc.....	217
5	Models for the accretion of the coastal region and Western Cordillera blocks	219
6	Provenance analysis of the Western Cordillera and coastal forearc region	222
6.1	Heavy mineral data	222
6.2	Detrital zircon U-Pb ages of Late Cretaceous to Cenozoic strata capping the Pallatanga and Piñon blocks	224
7	Late Cretaceous to Miocene Tectonic history of western Ecuador	228
7.1	Evolution of the Piñon and Pallatanga blocks and their volcanic and sedimentary cover	228
7.2	Autochthonous origin for the Macuchi block.....	230
8	Conclusions.....	231
	Acknowledgments	232
	Appendix: Supplementary material	232
	References.....	232

CHAPTER 9	Provenance and geochronological insights into Late Cretaceous-Cenozoic foreland basin development in the Subandean Zone and Oriente Basin of Ecuador	237
	E. Gabriela Gutiérrez, Brian K. Horton, Cristian Vallejo, Lily J. Jackson, Sarah W.M. George	
1	Introduction.....	237
2	Geologic framework	239
3	Depositional systems	241
3.1	Eocene Tiyuyacu Formation: Gravelly braided river.....	241
3.2	Oligocene-lowermost Miocene Chalcana Formation: Silty sand-dominated meandering river.....	244
3.3	Miocene Arajuno Formation: Meandering to sand-dominated braided river.....	245
4	Sediment source regions	245
4.1	Cratonic source regions	247
4.2	Andean source regions.....	247
5	Zircon U-Pb geochronology	248
5.1	Detrital zircon provenance analyses	248
6	Discussion.....	256
6.1	Early Cretaceous development of postextensional sag basin	256
6.2	Late Cretaceous onset of shortening, flexure, and foreland basin sedimentation.....	256
6.3	Paleocene-Eocene shortening and thrust belt advance	258
6.4	Oligocene diminished shortening and magmatic flareup	259
6.5	Miocene-Quaternary main phase of Andean shortening	259
7	Conclusions.....	260
	Acknowledgments	260
	Appendix: Supplementary material	260
	References.....	260
	Further reading.....	267
CHAPTER 10	Sediment provenance variations during contrasting Mesozoic-early Cenozoic tectonic regimes of the northern Peruvian Andes and Santiago-Marañón foreland basin	269
	Sarah W.M. George, Brian K. Horton, Lily J. Jackson, Federico Moreno, Victor Carlotto, Carmala N. Garzione	
1	Introduction.....	269
2	Geologic context.....	270
3	Stratigraphic framework	272
4	U-Pb geochronology	276
4.1	Methods	276

4.2 Potential sediment sources.....	277
4.3 Detrital zircon results and interpretations.....	280
5 Basin reconstruction	285
5.1 Middle to Late Triassic	287
5.2 Late Triassic to Early Jurassic	287
5.3 Early Jurassic to Early Cretaceous	287
5.4 Early Cretaceous.....	288
5.5 Late Cretaceous	289
5.6 Latest Cretaceous–Paleogene	289
6 Conclusions.....	290
Acknowledgments	290
Appendix: Supplementary material	291
References.....	291
Further reading.....	296

Part III Central Andes

CHAPTER 11 Western thrusting and uplift in northern Central Andes (western Peruvian margin)	299
Alice Prudhomme, Patrice Baby, Alexandra Robert, Stéphanie Brichau, Edward Cuipa, Adrien Eude, Ysabel Calderon, Paul O'Sullivan	
1 Introduction.....	299
2 Geological background.....	300
2.1 Northern Central Andes tectonic setting.....	300
2.2 The Yaquina, Trujillo, and Salaverry offshore forearc basins.....	302
2.3 The Western Cordillera and the Calipuy Plateau-Basin	302
3 Methodology and data	303
4 Structural architecture of the forearc basins	306
5 Structural architecture of the Western Cordillera	307
6 Offshore-onshore stratigraphic correlations	311
7 Regional balanced cross-section	315
8 Calipuy Plateau-Basin and WAE exhumation from thermochronology	317
9 Cenozoic tectonic history and discussion	320
10 Conclusion	324
Acknowledgments	325
Appendix: Supplementary material	325
References.....	325
CHAPTER 12 Structural controls along the Peruvian Subandes	333
Gonzalo Zamora, Melanie Louterbach, Pedro Arriola	
1 Introduction.....	333

2	Geological context	335
3	Stratigraphy.....	336
3.1	Paleozoic.....	336
3.2	Mesozoic.....	337
3.3	Cenozoic	338
4	Northern sector (Marañón Basin and Huallaga and Santiago sub-basins)	339
4.1	The Marañón Basin.....	339
4.2	The Santiago sub-basin.....	342
4.3	The Huallaga sub-basin	342
5	Central sector (Ucayali Basin and, Ene, Pachitea and Camisea sub-basins).....	344
5.1	The Northern Ucayali Basin and Pachitea sub-basin.....	344
5.2	The Ene sub-basin.....	346
5.3	The Camisea sub-basin	346
6	Southern sector (Madre de Dios).....	352
7	Discussion.....	353
8	Conclusions.....	356
	Acknowledgments	357
	References.....	357
	Further reading.....	362

CHAPTER 13 Provenance and recycling of detrital zircons from Cenozoic Altiplano strata and the crustal evolution of western South America from combined U-Pb and Lu-Hf isotopic analysis ...363

Kurt Sundell, Joel E. Saylor, Mark Pecha

1	Introduction.....	363
2	Geologic context.....	365
2.1	Assembly of the South American continent	365
2.2	Study area in the Peruvian Altiplano	366
3	Methods	367
3.1	U-Pb geochronology	368
3.2	Hf isotope geochemistry	368
3.3	Data visualization	370
3.4	Frequency analysis.....	370
4	Results.....	371
4.1	U-Pb geochronology	371
4.2	Hf isotope geochemistry	372
5	Discussion.....	379
5.1	Detrital zircon provenance.....	379
5.2	Detrital zircon recycling	381
5.3	Crustal evolution of western South America	388
5.4	Cyclical orogenesis.....	389
6	Conclusions.....	391

Acknowledgments	391
Appendix: Supplementary material	391
References.....	391
Further reading.....	397

CHAPTER 14 Structure and tectonic evolution of the Interandean and Subandean Zones of the central Andean fold-thrust belt of Bolivia 399

E.A. Rojas Vera, P. Giampaoli, E. Gobbo, E. Rocha, G. Olivieri,
D. Figueroa

1 Introduction.....	399
2 Geologic setting	401
3 Tectonic evolution of the Bolivian Andes.....	402
4 Exhumation history of the orogen	405
5 Stratigraphic column and mechanical behavior.....	405
6 Structural styles and deformational models.....	407
7 Fold growth and lateral linkage	408
8 Methods	408
9 Structure of the southern Subandean fold-thrust belt and Interandean Zone	409
9.1 Desecho Chico section (A-A').....	409
9.2 Churumas section (B-B').....	411
9.3 Villamontes section (C-C').....	411
9.4 Iguembe section (D-D').....	414
9.5 Incahuasi section (E-E').....	414
9.6 Tarabuco section (F-F').....	416
9.7 Samaipata section (G-G').....	416
10 Discussion.....	418
10.1 Exhumation of the subandean fold-thrust belt.....	418
11 Along-strike shortening gradient	418
12 Implication in hydrocarbons exploration.....	419
13 Conclusions.....	421
Acknowledgments	422
References.....	422

CHAPTER 15 Structural and thermochronologic constraints on kinematics and timing of inversion of the Salta rift in the Tonco-Amblayo sector of the Andean retroarc fold-thrust belt, northwestern Argentina 429

Cullen Kortyna, Peter G. DeCelles, Barbara Carrapa

1 Introduction.....	429
2 Geological background.....	431
2.1 Regional setting	431
2.2 Tectonic history of NW Argentina.....	433

2.3 Previous cenozoic shortening estimates and cross-sections in northern Argentina 434

2.4 Previously documented exhumation history in NW Argentina (23–27°S)..... 434

2.5 Stratigraphic and structural models of deformation in the eastern Cordillera 435

3 Stratigraphic framework of the TATB 436

3.1 Puncoviscana formation and Salta group..... 436

3.2 The Payogastilla and Orán Groups 440

4 Structural geology of the TATB 441

4.1 Geologic mapping..... 441

4.2 Regional structure 441

4.3 Regional cross-sections..... 445

5 Thermochronology 448

5.1 Apatite (U-Th)/He system 448

5.2 AHe sample locations 449

5.3 Apatite (U-Th)/He results 450

5.4 Summary of apatite (U-Th)/He results 451

5.5 Modeling of AHe data 453

6 Discussion 455

6.1 Deformation in the TATB 455

6.2 Shortening estimates..... 456

6.3 Kinematic sequence 456

7 Conclusions..... 457

Acknowledgments 458

Appendix: Supplementary material 458

References..... 458

CHAPTER 16 Tectonic evolution of the western "Pampean" flat segment (28°–30°S)..... 465

F. Martínez, C. Arriagada, C. López, Mauricio Parra

1 Introduction..... 465

2 Stratigraphy of the western "Pampean" flat-slab segment..... 467

2.1 Coastal Cordillera 467

2.2 Frontal Cordillera..... 467

3 Structural styles present in the western "Pampean" flat-slab segment 470

4 Mechanisms of deformation 473

4.1 Normal faults reactivation..... 473

4.2 Basement-involved reverse faulting..... 476

5 Chronology of Andean deformation 476

6 General discussions 479

7 Conclusions..... 481

Acknowledgments 482

References.....	482
Further reading.....	485
CHAPTER 17 Thermal and lithospheric structure of the Chilean-Pampean flat-slab from gravity and magnetic data	487
Marcos A. Sánchez, Héctor P.A. García, Gemma Acosta, Guido M. Gianni, Marcelo A. Gonzalez, Juan P. Ariza, Myriam P. Martinez, Andrés Folguera	
1 Introduction.....	487
2 Tectonic setting.....	489
3 Methodology.....	490
3.1 Magnetic database	490
3.2 Curie point-depth estimation	490
3.3 Heat flow determination	493
3.4 Gravity database	493
4 Results and conclusions.....	502
Acknowledgments	503
References.....	503
Further reading.....	507
CHAPTER 18 Fragments of the late Paleozoic accretionary complex in central and northern Chile: Similarities and differences as a key to decipher the complexity of the late Paleozoic to Triassic early Andean events	509
Juan Díaz-Alvarado, Gonzalo Galaz, Verónica Oliveros, Christian Creixell, Mauricio Calderón	
1 Occurrence of accretionary complexes and subduction channels in subductive and collisional margins	509
2 Description of the accretionary complexes of the Chilean coast.....	511
2.1 Lithological characteristics and depositional setting of the accretionary complexes	512
2.2 Volcanic rocks included in the accretionary complexes	512
2.3 Structural characteristics.....	514
2.4 Metamorphic conditions	515
2.5 Geochronological determinations.....	516
3 Late Paleozoic to Triassic magmatism related to the southwestern convergent margin of Gondwana	517
4 The late Paleozoic early Andean (Gondwanan and pre-Andean) events depicted by the study of the coastal accretionary complexes in central and northern Chile.....	518
4.1 Facts deduced from the study of the late Paleozoic accretionary complexes in central and northern Chile... ..	518
4.2 ... and theories about the evolution of the southwestern margin of Gondwana between the late Paleozoic and the late Triassic.....	520

5 Concluding remarks: Early Andean orogenic/tectonic cycles and phases.....524
 Acknowledgments525
 References.....525
 Further reading.....530

CHAPTER 19 $^{40}\text{Ar}/^{39}\text{Ar}$ constraints on the tectonic evolution of the late Paleozoic and early Mesozoic accretionary complex of coastal central Chile 531
 Laura E. Webb, Keith A. Klepeis

1 Introduction.....531
 1.1 Geologic background.....533
 2 Methods534
 3 Results.....535
 3.1 Isla Negra.....535
 3.2 Las Cruces538
 3.3 Agua Salada.....542
 3.4 Quintay545
 4 Discussion.....545
 4.1 Late Carboniferous-Early Permian arc magmatism and deformation545
 4.2 Late Triassic-Early Jurassic granitoids, leucocratic intrusions, and high-strain shear zones.....547
 4.3 Late Jurassic arc magmatism and deformation.....548
 4.4 Cretaceous (and younger) faulting.....548
 5 Conclusions.....549
 Acknowledgments550
 Appendix: Supplementary material550
 References.....551

Part IV Southern Andes

CHAPTER 20 Crustal structure in the southern Andes, adjacent foreland, and Atlantic passive margin delineated by satellite gravimetric models 557
 Mario Gimenez, Agustina Pesce, Stefanie Pechuan, María Alejandra Arecco, Santiago R. Soler, Sebastián Correa Otto, Federico Lince Klinger, Orlando Álvarez, Andrés Folguera

1 Introduction.....557
 2 Methodology.....559
 2.1 The topography corrected vertical gravity gradient (T_{zz}).....559
 2.2 2-D gravity forward model562
 2.3 Depth to the crust-mantle interface (Moho)562
 3 Results.....565
 4 Discussion.....566

5	Conclusions.....	568
	Acknowledgments	569
	References.....	569
CHAPTER 21	Cenozoic arc-related magmatism in the southern Central and North Patagonian Andes.....	573
	Vanesa D. Litvak, Lucía Fernández Paz, Sofía Iannelli, Stella Poma, Andrés Folguera	
1	Introduction.....	573
2	Regional distribution of Cenozoic arc rocks.....	575
3	Geochemical evolution of arc magmas in relation to the changing geodynamic framework	578
3.1	Paleocene-middle Eocene.....	579
3.2	Late Eocene-early Oligocene.....	581
3.3	Late Oligocene-early Miocene	584
3.4	Middle Miocene-middle Pliocene.....	589
4	Andean arc-magmatic evolution from the southern central to the north Patagonian Andes.....	594
5	Conclusions.....	598
	Acknowledgments	599
	References.....	599
	Further reading.....	607
CHAPTER 22	Tectonic controls on the building of the North Patagonian fold-thrust belt (~43°S).....	609
	A. Echaurren, Guido M. Gianni, Lucía Fernández Paz, C. Navarrete, Verónica Oliveros, A. Encinas, Mario Giménez, F. Lince-Klinger, Andrés Folguera	
1	Introduction.....	609
2	Tectonic setting of North Patagonia.....	611
3	Mesozoic evolution: From continental breakup to initial Andean orogeny.....	613
3.1	Geology of the Mesozoic igneous rocks.....	614
3.2	Basin evolution and deformational processes.....	620
3.3	Geochemical features and magma sources	624
4	Cenozoic evolution: Paleogene extensional regime and Neogene Andean rise.....	625
4.1	Geology of Cenozoic magmatic rocks.....	626
4.2	Basin evolution and deformational processes.....	628
4.3	Geochemical data.....	629
5	Discussion: Tectonic evolution and controls on orogenesis	631
6	Conclusions.....	636
	Acknowledgments	637
	References.....	637
	Further reading.....	649

CHAPTER 23	Along-strike segmentation of the Farallon-Phoenix midocean ridge: Insights from the Paleogene tectonic evolution of the Patagonian Andes between 45° and 46°30'S	651
	Guido M. Gianni, Agustina Pesce, Santiago R. Soler, Héctor P.A. García, Marcos A. Sánchez, C. Navarrete, A. Echaurren, A. Encinas, Andrés Folguera	
1	Introduction.....	651
2	Geological background of the Andes between 45°S and 46°30'S	654
3	Synthesis of Andean Paleogene tectonics from 45°S to 46°30'S.....	655
4	Overview of Paleogene tectonics of Central Patagonia.....	657
5	Summary and discussion on Paleogene tectonics of Central Patagonia.....	665
6	Conclusions.....	667
	Acknowledgments	668
	References.....	668
	Further reading.....	673
CHAPTER 24	Structure and tectonic evolution of the South Patagonian fold and thrust belt: Coupling between subduction dynamics, climate and tectonic deformation	675
	Matías C. Ghiglione, Gonzalo Ronda, Rodrigo J. Suárez, Inés Aramendía, Vanesa Barberón, Miguel E. Ramos, Jonathan Tobal, Ezequiel García Morabito, Joseph Martinod, Christian Sue	
1	Introduction.....	675
2	Tectostratigraphic evolution of the SPA	681
	2.1 Paleozoic to Early Cretaceous: Pre-Andean evolution	681
	2.2 Late Cretaceous—Neogene Andean evolution	682
3	Stratigraphy of the Southern Patagonian Andes	682
	3.1 Stratigraphy of the eastern basement domain.....	683
	3.2 Stratigraphy of the fold and thrust belt	683
	3.3 North-South stratigraphic variations.....	686
4	Structure of the Southern Patagonian Andes	686
	4.1 Basement domain.....	686
	4.2 Structure of the fold-and-thrust belt	687
5	Discussion and final remarks.....	688
	5.1 Orogen width, mechanical stratigraphy, and shortening in the Southern Patagonian Andes.....	688
	5.2 Major structural segments in the SPA.....	689
	5.3 Comparison of domain distribution with exhumation patterns	689
	Acknowledgments	691
	References.....	691
	Further reading.....	697
	Index	699
