

FRIEDRICH-SCHILLER- UNIVERSITÄT JENA

Scaling Ultrashort Light-Matter Interaction to the Short-Wave Infrared Regime and Beyond

Dissertation
zur Erlangung des akademischen Grades
doctor rerum naturalium (Dr. rer. nat.)

Vorgelegt dem Rat der Physikalisch-Astronomischen Fakultät der
Friedrich-Schiller Universität Jena

von M.Sc. Danilo Zille

geboren am 19.07.1989 in Aschersleben

Contents

	Page
1 Introduction & Thesis' Structure	6
1.1 Motivation	6
1.2 Thesis' Structure	7
2 Theory & Numerical Methods	9
2.1 The Three-Step Model	9
2.1.1 Mathematical Description of the Three-Step Model	10
2.1.2 Few-Cycle Pulses - Influence of the CEP	13
2.2 The Regimes of Strong-Field Ionization	15
2.3 Elastic Scattering Processes	16
2.3.1 Numerical Algorithm	16
2.4 Scattering Potentials	17
2.4.1 Non-Local Pseudopotentials	17
2.4.2 Nobel Gas Atomic Potentials	19
2.4.3 Alkali-Metal Atomic Potentials	20
2.5 Classical Trajectory Monte-Carlo Simulations	23
2.5.1 The Ionization Step	23
2.5.2 Contributions from Direct Electrons	24
2.5.3 Contributions from Scattered Electrons	24
3 Experimental Methods	26
3.1 Ultrashort Laser Pulses	26
3.1.1 Mathematical Description of Few-Cycle Pulses	26
3.1.2 Creation of Few-Cycle Pulses between 800 nm and 2400 nm	28
3.1.2.1 Few-Cycle Pulses at 800 nm	28
3.1.2.2 Few-cycle Pulses at 1800 nm	28
3.1.2.3 Ultrashort Pulses up to 10 μm	30
3.2 Time-of-Flight Photoelectron Spectroscopy	30
3.3 The Carrier-Envelope Phasemeter	33
3.3.1 Working Principle of the Carrier-Envelope Phasemeter	33
3.3.2 Operation of the Carrier-Envelope Phasemeter	34
3.3.3 The Carrier-Envelope Phasemeter at 1800 nm	36

3.4	Atomic Oven	37
3.4.1	Preparing the Oven for Operation	38
3.4.2	Oven Heating and Alkali Properties	39
3.4.3	Characterization of the Oven During Operation	41
4	The Spin-Dependent Rescattering Process	43
4.1	The Three-Step Model of Spin-Dependent Rescattering	45
4.2	The Semi-Classical Treatment	47
4.3	Results & Discussion	49
4.3.1	Classical-Trajectory Monte-Carlo Simulations	49
4.3.2	Strong-Field Approximation	53
4.4	Proposals for Experimental Verification	55
4.5	Summary & Outlook	57
5	CEP- and Chirp Effects in the Multiphoton Regime at 800 nm	59
5.1	Importance & Previous Work	59
5.2	The Experimental Setup	60
5.3	Asymmetry Maps	62
5.4	The Analytical Model	62
5.4.1	Model-Building	62
5.4.2	A Slope-Finding Algorithm	65
5.4.3	The Analytical Slope	65
5.5	3D TDSE Calculations	66
5.6	Results & Discussion	67
5.6.1	Comparison Between Analytical Model, TDSE & Measurement	67
5.6.2	An Intuitive Physical Picture	69
5.6.3	Mapping Laser Chirp to the Asymmetry	70
5.7	Summary & Outlook	72
6	Strong-Field Ionization of Alkali-Metal Atoms at 1800 nm	74
6.1	Experimental Setup	76
6.2	Strong-Field Ionization of Xenon at 1800 nm	78
6.3	Intensity-Resolved Multi-Cycle Spectra of Alkali-Metal Atoms	81
6.4	CEP- and Intensity-Resolved Few-Cycle Spectra of Alkali-Metal Atoms	81
6.5	The Influence of Depletion on Photoelectron Asymmetries	86
6.6	Species-Dependent Rescattering of Alkali-Metal Atoms	89
6.7	Alkali-Metal Atoms as Candidates for a Carrier-Envelope Phasemeter	92
6.8	Angle-Resolved Few-Cycle Spectra	95
6.9	Summary & Outlook	97
7	Conclusion & Outlook	99

8 Bibliography	101
Appendix	119
9 Differential Scattering Cross-Sections	120
9.1 The Scattering Amplitude	120
9.2 Calculation of the Phase Shifts	121
9.3 Coulomb Potentials	122
9.4 Modified Coulomb Potentials	122
10 Time-Dependent Schrödinger Equation	124
10.1 Imaginary-Time Propagation	124
10.2 Real-Time Propagation	125
10.3 Photoelectron Spectra	126
10.3.1 Focal Volume Intensity Averaging	126
10.4 Convergence & Remarks	127
11 Pulse Characterization Techniques	128
11.1 Frequency-Resolved Optical Gating	128
11.2 Spectral Phase Interferometry for Direct Electric-Field Reconstruction . .	129
11.3 Intensity Control & Measurement	130
12 The Quantum-Mechanical Treatment of Spin-Dependent Rescattering	134
List of Abbreviations	137
List of Figures	138
List of Tables	139
Publications	140
