<i>Preface</i>	<i>page</i> xiii
<i>Acknowledgments for the French Edition</i>	xv
<i>List of Biographies</i>	xvi
<i>List of Figures</i>	xvii
The Origins of the Subject	1
1 The space $H^2(\mathbb{T})$: An Archetypal Invariant Subspace	5
1.1 Notation and Terminology of Operators	5
1.2 Reducing Subspaces of the Bilateral Shift M_z	6
1.3 Non-reducing Subspaces of the Bilateral Shift M_z	8
1.3.1 $H^p(\mathbb{T})$ Spaces	13
1.4 Beurling “Inner Functions”	14
1.5 $H^2(\mu)$ Spaces and the Riesz Brothers’ Theorem	16
1.5.1 Elementary Proof of Theorem 1.5.4 (Øksendal, 1971)	18
1.6 The Past and the Future: The Prediction Problem	20
1.7 Inner–Outer Factorization and Szegő’s Infimum	25
1.8 Exercises	29
1.8.1 The Wold–Kolmogorov Decomposition	29
1.8.2 The Shift Operator M_z on $L^2(\mathbb{T}, \mu)$	30
1.8.3 Inner and Outer Functions	31
1.9 Notes and Remarks	34
2 The $H^p(\mathbb{D})$ Classes: Canonical Factorization and First Applications	37
2.1 Fejér and Poisson Means	37
2.2 Definition of $H^p(\mathbb{D})$: Identification of $H^p(\mathbb{D})$ and $H^p(\mathbb{T})$	40
2.3 Jensen’s Formula and Jensen’s Inequality: $\log f \in L^1(\mathbb{T})$	42
2.4 Blaschke Products	46

2.5	Fatou's Theorem (Non-tangential Boundary Values)	49
2.6	The Smirnov Canonical Factorization	53
2.7	Applications: Szegő Infimum, Weighted Polynomial Approximations, Invariant Subspaces of $L^p(\mathbb{T})$	57
2.7.1	Cyclic Vectors of the Shift Operator M_z	58
2.7.2	Weighted Density of Polynomials \mathcal{P}_α	59
2.8	Exercises	60
2.8.1	Invariant Subspaces of $L^p(\mathbb{T}, \mu)$	60
2.8.2	Factorization on the H^p Scale, $0 < p < \infty$	63
2.8.3	The Hilbert and Hardy Inequalities	65
2.8.4	Harmonic Conjugates and the Riesz Projection (1927), Following Calderón (1950)	68
2.8.5	The Kolmogorov Weak Type Inequality	73
2.8.6	The Littlewood Subordination Principle (1925)	74
2.9	Notes and Remarks	77
3	The Smirnov Class \mathcal{D} and the Maximum Principle	82
3.1	Calculus of Outer Functions	82
3.1.1	Properties of Outer Functions	83
3.2	Calculus of Inner Functions: The Spectrum	86
3.2.1	Properties of the Divisors, GCDs, and LCMs	87
3.2.2	Logarithmic Residues	91
3.3	The Nevanlinna (\mathcal{N}) and Smirnov (\mathcal{D}) Classes	92
3.3.1	A Few Properties of \mathcal{N} and \mathcal{D} , by Smirnov (1932)	94
3.4	The Generalized Phragmén–Lindelöf Principle	96
3.4.1	The Spaces \mathcal{N} and \mathcal{D} : Conformally Invariant Versions	96
3.4.2	Generalized Phragmén–Lindelöf Principle	97
3.4.3	Classical Examples	99
3.5	Exercises	100
3.5.1	An Improvement of Liouville's Theorem	100
3.5.2	The Case of a Strip (Phragmén and Lindelöf, 1908)	102
3.5.3	An Inner Function Which Becomes Outer on a Subdomain	102
3.5.4	Division by a Singular Function with a Point Measure	103
3.6	Notes and Remarks	104
4	An Introduction to Weighted Fourier Analysis	106
4.1	Generalized Fourier Series	108
4.1.1	Minimal Sequences	109
4.1.2	Bases	111

4.2	Skew Projections	114
4.2.1	Properties of $P_{L\ M}$	114
4.3	The Angle Between the Past and the Future	115
4.3.1	Properties of the Angle	115
4.4	The Case of the Exponentials: A Reduction to P_+	116
4.5	The Hilbert Operator: The Classical Case of $L^2(\mathbb{T})$	119
4.6	Exponential Bases in $L^2(\mathbb{T}, \mu)$	120
4.7	Prediction and Hankel Operators	125
4.7.1	Strongly Regular Processes	126
4.7.2	Angular Operators and Hankel Operators	127
4.8	$b(\mathcal{X})$ Versus $ub(\mathcal{X})$	129
4.8.1	Proof of Theorem 4.8.2	135
4.8.2	Gram Matrices	135
4.9	Exercises	138
4.9.1	Criterion of Linear Dependence of Exponentials	138
4.9.2	Multipliers Versus Bases	138
4.9.3	Projections on a Hilbert Space	141
4.9.4	The Sharpness of the McCarthy–Schwartz Inequality	141
4.10	Notes and Remarks	145
5	Harmonic Analysis and Stationary Filtering	150
5.1	The Language of Linear Filters	150
5.1.1	The Fourier Transform and the Frequency Domain	152
5.2	Characterization of Stationary Filters	153
5.3	What Can Filtering Do?	156
5.3.1	A Bit More Terminology for Filters	156
5.3.2	Some Typical Problems in Filtering	157
5.4	Synthesis of Causal Filters	158
5.4.1	Filters of Optimal “Signal to Noise Ratio”	160
5.4.2	Frequency Response on a Very Thin Band	161
5.4.3	Helson Sets: Arbitrary Frequency Response on $\sigma \subset \mathbb{T}$	164
5.4.4	Causal Recursive Filters	166
5.5	Inverse Problem: “Can One Hear the Shape of a Drum?”	167
5.5.1	Moving Averages of a Signal	169
5.6	Exercises	170
5.6.1	Identification of Filters: Moving Averages	170
5.6.2	The Non-equality $C_a(\mathbb{D}) \neq W_a(\mathbb{D})$	171
5.6.3	Helson Sets in the Disk \mathbb{D} (Vinogradov, 1965)	175
5.7	Notes and Remarks	176

6	The Riemann Hypothesis, Dilations, and H^2 in the Hilbert Multi-disk	187
6.1	The Euler ζ Function and the Riemann Hypothesis (RH)	190
6.1.1	Prime Number Decomposition (Euclid, c. 300 BCE; Gauss, 1801)	190
6.1.2	The Euler Infinite Product	191
6.1.3	The Riemann Hypothesis (RH), 1859	195
6.2	An Approximation Implying the Riemann Hypothesis	197
6.3	$H^2(\mathbb{C}^+)$ and the “Weak Paley–Wiener Theorem”	199
6.3.1	A Unitary Mapping of $L^2(\mathbb{T})$ onto $L^2(\mathbb{R})$	199
6.3.2	Fourier Transforms and the “Weak Paley–Wiener Theorem”	202
6.3.3	The Mellin Transform and the Group of Dilations	204
6.3.4	Completeness of the Characters, the Translations, and/or the Dilations	206
6.4	The Nyman Theorem	207
6.5	The Distance Function and Zero-free Disks of ζ	208
6.5.1	The Distance Function	209
6.6	Completeness of Dilations and the Hilbert Multi-disk	211
6.6.1	The Wintner–Beurling Problem	211
6.6.2	Change of Orthonormal Basis: The Semigroup $\mathcal{T} = (T_n)$ on H_0^2	214
6.6.3	The Reproduction of Variables and the Bohr Transform	214
6.6.4	The Hilbert Multi-disk \mathbb{D}_2^∞ and the Space $H^2(\mathbb{D}_2^\infty)$	216
6.6.5	A Few Initial Observations	217
6.6.6	Cyclic Polynomials	220
6.6.7	Other Classes of (T_n) -cyclic Functions of H_0^2	221
6.7	Exercises	223
6.7.1	Multipliers of the Space $H^2(\mathbb{D}_2^\infty)$	223
6.7.2	Orthogonal Dilations	223
6.7.3	Asymptotics of $\ k_a\ _p^p$ as $a \rightarrow 0$	224
6.7.4	Particular Features of the Multi-disk \mathbb{D}_2^∞	224
6.7.5	A Few Cyclic Functions in $H^2(\mathbb{D}_2^\infty)$	225
6.7.6	A Function (\mathcal{D}_n) -cyclic in $L^2(0, 1)$ (Kozlov, 1950; Akhiezer, 1965)	227
6.8	Notes and Remarks	227
Appendix A	Key Notions of Integration	233
Appendix B	Key Notions of Complex Analysis	243
Appendix C	Key Notions of Hilbert Spaces	247

Appendix D	Key Notions of Banach spaces	251
Appendix E	Key Notions of Linear Operators	254
