

Semi-Empirical Water-Use Efficiency Models
from Local to Global Scale

DISSERTATION

zur Erlangung des akademischen Grades
doctor rerum naturalium (Dr. rer. nat.)

vorgelegt dem Rat der
Chemisch-Geowissenschaftlichen Fakultät der
Friedrich-Schiller-Universität Jena

von
Sven Boese (M.Sc.)
geboren am 2. Dezember 1987 in Bayreuth

List of Figures	9
List of Tables	12
List of Acronyms and Symbols	13
Summary	17
Zusammenfassung	19
Context and Scope	23
Structure and Related Publications	33
1 The Importance of Radiation	35
1.1 Context	35
1.2 Data & Methods	37
1.2.1 Data	37
1.2.2 Concepts & models	38
1.2.3 Parameter estimation & statistics	40
1.2.4 Contribution analysis	40
1.3 Results	42
1.4 Discussion	50
1.4.1 Findings and mechanisms	50
1.4.2 Limitations	51
1.4.3 Implications	53
2 The Effects of Progressive Drought	55
2.1 The Importance of Drought Events	55
2.2 Detection of Dry-Down Events & Structure of the Analysis	57
2.2.1 Data & preprocessing	57
2.2.2 Dry-down event selection	57

2.2.3	Derivation of soil water availability proxy	58
2.2.4	Models	59
2.2.5	Model calibration and evaluation	60
2.2.6	Experimental design	61
2.2.7	Fraction of radiation-associated transpiration	64
2.2.8	Attenuation	64
2.3	Results	65
2.4	Discussion	70
2.4.1	Findings	70
2.4.2	Uncertainties	73
2.4.3	Implications & outlook	74
3	Parameter Generalization	77
3.1	The Relevance of Parameter Generalizations	77
3.2	Data and Methods Used for Generalization	79
3.2.1	Parameter prediction with a random forest	80
3.2.2	K-nearest neighbors as generalization approach	81
3.3	Results of the Generalization	83
3.4	Discussion	89
3.4.1	Findings	89
3.4.2	Limitations	94
3.4.3	Implications & outlook	95
	Synthesis	97
