

Statistical Analysis of Ecotoxicity Studies

John W. Green, Ph.D. (Mathematics), Ph.D. (Statistics)

*Principal Consultant: Biostatistics
DuPont Data Science and Informatics*

Timothy A. Springer, Ph.D. (Wildlife and Fisheries Science)

*Director of Special Projects and IT Operations
EAG/Wildlife International*

Henrik Holbech, Ph.D. (Ecotoxicology)

*Associate Professor
Institute of Biology, University of Southern Denmark*

WILEY

Contents

Preface	ix
Acknowledgments	xi
About the Companion Website	xiii
1. An Introduction to Toxicity Experiments	1
1.1 Nature and Purpose of Toxicity Experiments	1
1.2 Regulatory Context for Toxicity Experiments	7
1.3 Experimental Design Basics	8
1.4 Hierarchy of Models for Simple Toxicity Experiments	12
1.5 Biological vs. Statistical Significance	13
1.6 Historical Control Information	15
1.7 Sources of Variation and Uncertainty	15
1.8 Models with More Complex Structure	16
1.9 Multiple Tools to Meet a Variety of Needs or Simple Approaches to Capture Broad Strokes?	16
2. Statistical Analysis Basics	19
2.1 Introduction	19
2.2 NOEC/LOEC	19
2.3 Probability Distributions	24
2.4 Assessing Data for Meeting Model Requirements	29
2.5 Bayesian Methodology	30
2.6 Visual Examination of Data	30
2.7 Regression Models	32
2.8 Biology-Based Models	34
2.9 Discrete Responses	35
2.10 Time-to-Event Data	37
2.11 Experiments with Multiple Controls	38
Exercises	41
3. Analysis of Continuous Data: NOECs	47
3.1 Introduction	47
3.2 Pairwise Tests	47
3.3 Preliminary Assessment of the Data to Select the Proper Method of Analysis	53
3.4 Pairwise Tests When Data do not Meet Normality or Variance Homogeneity Requirements	62
3.5 Trend Tests	67
3.6 Protocol for NOEC Determination of Continuous Response	75
3.7 Inclusion of Random Effects	75
3.8 Alternative Error Structures	76
3.9 Power Analyses of Models	77
Exercises	81
4. Analysis of Continuous Data: Regression	89
4.1 Introduction	89
4.2 Models in Common Use to Describe Ecotoxicity Dose-Response Data	92
4.3 Model Fitting and Estimation of Parameters	95
4.4 Examples	104
4.5 Summary of Model Assessment Tools for Continuous Responses	112
Exercises	114
5. Analysis of Continuous Data with Additional Factors	123
5.1 Introduction	123
5.2 Analysis of Covariance	123
5.3 Experiments with Multiple Factors	135
Exercises	154
6. Analysis of Quantal Data: NOECs	157
6.1 Introduction	157
6.2 Pairwise Tests	157
6.3 Model Assessment for Quantal Data	160
6.4 Pairwise Models that Accommodate Overdispersion	162
6.5 Trend Tests for Quantal Response	165

6.6	Power Comparisons of Tests for Quantal Responses	168	
6.7	Zero-Inflated Binomial Responses	172	
6.8	Survival- or Age-Adjusted Incidence Rates	175	
	Exercises	179	
7.	Analysis of Quantal Data: Regression Models		181
7.1	Introduction	181	
7.2	Probit Model	181	
7.3	Weibull Model	188	
7.4	Logistic Model	188	
7.5	Abbott's Formula and Normalization to the Control	190	
7.6	Proportions Treated as Continuous Responses	197	
7.7	Comparison of Models	198	
7.8	Including Time-Varying Responses in Models	199	
7.9	Up-and-Down Methods to Estimate LC50	204	
7.10	Methods for EC _x Estimation When there is Little or no Partial Mortality	206	
	Exercises	215	
8.	Analysis of Count Data: NOEC and Regression		219
8.1	Reproduction and Other Nonquantal Count Data	219	
8.2	Transformations to Continuous	219	
8.3	GLMM and NLME Models	223	
8.4	Analysis of Other Types of Count Data	228	
	Exercises	237	
9.	Analysis of Ordinal Data		243
9.1	Introduction	243	
9.2	Pathology Severity Scores	243	
9.3	Developmental Stage	249	
	Exercises	255	
10.	Time-to-Event Data		259
10.1	Introduction	259	
10.2	Kaplan–Meier Product-Limit Estimator	261	
10.3	Cox Regression Proportional Hazards Estimator	266	
10.4	Survival Analysis of Grouped Data	268	
	Exercises	271	
11.	Regulatory Issues		275
11.1	Introduction	275	
11.2	Regulatory Tests	275	
11.3	Development of International Standardized Test Guidelines	276	
11.4	Strategic Approach to International Chemicals Management (SAICM)	279	
11.5	The United Nations Globally Harmonized System of Classification and Labelling of Chemicals (GHS)	279	
11.6	Statistical Methods in OECD Ecotoxicity Test Guidelines	279	
11.7	Regulatory Testing: Structures and Approaches	279	
11.8	Testing Strategies	287	
11.9	Nonguideline Studies	291	
12.	Species Sensitivity Distributions		293
12.1	Introduction	293	
12.2	Number, Choice, and Type of Species Endpoints to Include	294	
12.3	Choice and Evaluation of Distribution to Fit	294	
12.4	Variability and Uncertainty	300	
12.5	Incorporating Censored Data in an SSD	302	
	Exercises	307	
13.	Studies with Greater Complexity		309
13.1	Introduction	309	
13.2	Mesocosm and Microcosm Experiments	310	
13.3	Microplate Experiments	316	
13.4	Errors-in-Variables Regression	321	
13.5	Analysis of Mixtures of Chemicals	323	
13.6	Benchmark Dose Models	326	
13.7	Limit Tests	327	
13.8	Minimum Safe Dose and Maximum Unsafe Dose	329	
13.9	Toxicokinetics and Toxicodynamics	331	
	Exercises	343	
	Appendix 1 Dataset		345
	Appendix 2 Mathematical Framework		347
A2.1	Basic Probability Concepts	347	
A2.2	Distribution Functions	348	
A2.3	Method of Maximum Likelihood	350	
A2.4	Bayesian Methodology	352	
A2.5	Analysis of Toxicity Experiments	354	

A2.6	Newton's Optimization Method	358	Table A3.3	Linear and Quadratic Contrast Coefficients	366
A2.7	The Delta Method	359	Table A3.4	Williams' Test $\bar{t}_{\alpha,k}$ for $\alpha = 0.05$	367
A2.8	Variance Components	360			
Appendix 3 Tables			References
