

Handbook of Non-Ferrous Metal Powders

Technologies and Applications

Second Edition

Oleg D. Neikov

Stanislav S. Naboychenko

Nikolay A. Yefimov

Contents

Acknowledgments	xiii	Bulk Density	49
Foreword	xv	Tap Density	52
Introduction	xvii	Flow Rate	54
		Sliding at Impact Point	54
		Segregation of Particles	54
		Trajectory Effect	54
		Screening Model (Also Called Sifting Phenomenon)	54
		Fluidization	55
		Angle of Repose	55
		Multiaimed Powder Tester FT4	57
		Compressibility and Compactibility of Metal Powders	57
		Compressibility	57
		Green Strength	58
		Apparatuses for Powder Analysis	59
		References	61
Section A		Section B	
Powder Characterization and Testing		Powder Production Methods	
1. Powder Characterization and Testing		2. Mechanical Crushing and Grinding	
<i>Oleg D. Neikov and Nikolay A. Yefimov</i>		<i>Oleg D. Neikov</i>	
Introduction	3	Introduction	65
Sampling of Powders	4	Mechanism of the Ductile Metal Deformation	66
Weight of Sample	6	Regularities of Milling	68
Particle Image Analysis	6	Impact Process by Colliding Balls	68
Size Measurements	7	Grindability	70
Particle Shape	7	Temperature Rise During Milling	72
Particle Size Distribution Analysis	8	Crushing and Grinding Equipment	74
Optical Microscopy	8	Crushers	74
Metallographic Microscopy	10	Grinding Techniques	75
Scanning Electron Microscopy	10	Medium Agitating Mills	81
Transmission Electron Microscopy	10	Jet Mills	85
Sieve Analyses	11	Other High-energy Milling Methods	85
Classification in a Gravitational Field	13	References	89
Classification in Centrifugal Field	16		
Classification in Inertia Force Field	18		
Counting and Sizing of Particles by Indirect Measures	18		
Coulter Counter	21		
Regularities of Granulometric Composition	22		
Techniques of Chemical Analysis for Powders	26		
Microanalysis Methods	27		
Surface Analysis	30		
Bulk Analysis	33		
Surface Area and Porosity of Powders	38		
Gas Adsorption	39		
Permeametry	41		
Pycnometry	42		
Porosimetry	43		
Bulk Properties of Powders	47		
Bulk Flow Parameters	47		
Cohesive Strength	47		
Frictional Properties	48		
		3. Mechanical Alloying	
		<i>Oleg D. Neikov</i>	
		Introduction	91
		Mechanical Alloying Process	92
		Process Control Agent	92

Further Processing	94	5. Gas-Phase Method of Metal Powder Production	
Milling Equipment	94	<i>Irina V. Frishberg</i>	
Planetary Ball Mills	94	Introduction	187
Shaker Mills	96	Theoretical Basis of the Gas-Phase Method	187
Attritors	97	Mechanisms of Powder Formation During Vapor Condensation	189
Other Laboratory Mills Used for Mechanical Alloying	100	Peculiarities of the Formation of Alloy Powders	193
Commercial Mills	101	Controlling Principles of the Condensation Process	194
Selection of Grinding Medium	102	Powder Production and Application of Gas-phase Processes	194
Mechanical Alloying Fundamentals	104	Physical Vapor Deposition (PVD) Process	195
Oxide Dispersion-Strengthened Alloys	107	Properties of Powders and Areas of their Usage	196
Contact Displacement Reactions	108	Chemical Vapor Deposition (CVD) Process	197
Powder Contamination	109	Health and Environment Protection	198
Applications	112	References	199
Nickel-Base Alloys	112		
Cobalt-Base Alloys	113	6. Carbonyl Method of Metal Powder Production	
Aluminum-Base Alloys	113	<i>Irina V. Frishberg</i>	
Copper-Base Alloys	119	Introduction	201
Safety Engineering	119	Preparation of Metal Carbonyls	201
References	121	Theoretical Basis of the Synthesis	202
		Preparation of the Starting Materials for Carbonyl Production	204
4. Atomization and Granulation		Synthesis of Carbonyls	205
<i>Oleg D. Neikov</i>		Extraction, Purification and Separation of Carbonyls	205
Introduction	125	Manufacture of Powders by Thermal Decomposition of Metal Carbonyls	206
Water Atomization	128	Physicochemical Basis of the Process	206
Water Atomization Technique	128	The Technique of Powder Manufacture	207
Atomization Mechanism	132	Manufacture of Composite Powders	208
Powder Characteristics	134	Properties and Applications of the Metal Carbonyl Powders	208
Particle Size Distribution	135	Health and Environmental Protection Measures in the Carbonyl Industry	209
Oil Atomization	142	References	210
Gas Atomization	143		
Gas-Atomizing Units	144	7. Reduction Methods of Powder Production	
Process Parameters	148	<i>Stanislav S. Naboychenko</i>	
Models of Gas Atomization	149	Solid-Phase Reduction of Metal Oxides and Salts	211
Gas-Atomized Powders	158	Theory of the Process	211
Other Gas-Atomization Methods	162	Kinetics and Mechanism of the Process	212
Vacuum-Dynamic Atomization	167	Feedstock and Reagent Reducers	215
Centrifugal Atomization	167		
Models of Centrifugal Atomization	167		
Centrifugal Atomization Methods	169		
Other Methods	173		
Impact Atomization	173		
Vibrating Electrode Atomization	173		
Melt Drop Orifice Technique	173		
Roller Atomization	175		
Plasma Atomization Process	175		
Explosive Atomization	176		
Granulation	177		
Spray Granulation	177		
Spray Drying	178		
Control of Powder Properties	178		
Water Granulation	179		
Applications	179		
References	181		
Further Reading	185		

Powder Production	218	9. Nanopowders	
Push Type Furnaces	218	<i>Oleg D. Neikov and Nikolay A. Yefimov</i>	
Drum Furnaces	219	Introduction	271
Conveyor Furnaces	219	Features of Nanoparticles	272
Fluidized Bed Furnaces	219	Structural Characteristic	272
Safety Engineering	220	Thermodynamic Data	273
Metallothermy	221	Mechanical Properties	274
Chemical Reduction	221	Electromagnetic Properties	274
Chemical Precipitation from Solutions	221	Optical Properties	274
Thermodynamic Peculiarities of Metal		Testing of Nanopowders	275
Chemical Reduction	221	Testing of Nanopowder Structures and	
Kinetics of Solid-Phase Formation in Solution	223	Chemistry	275
Application of Chemically Reduced		Instrumental Indentation	276
Powders and Sols	225	Production Methods	278
Autoclave Precipitation of Metal Powders	225	Condensation Technique	278
Theory of Autoclave Metal Ions Reduction	226	Chemical Precipitation From Solution	282
Hydrodynamics	227	Spray Conversion Method	285
Parameters and Components of the Process	227	Plasmachemical Synthesis	286
Autoclave Processing of Hydroxide and		High-Energy Disintegration	289
Metal Carbonate Pulp	229	Nanopowder Passivation	292
Autoclave Precipitation of Metal Powders		Nanopowder Chemical Passivation	293
from Organic Phases	230	Microencapsulation of Nanoparticles	293
Equipment	230	Powder Processing Methods	294
Safety Engineering	231	Safety Aspects of Nanopowders Production	295
References	231	Applications	296
8. Electrochemical Methods of Metal Powder Production		Vapor Deposition in Vacuum	297
<i>Irina B. Murashova</i>		Cemented Carbides	300
Introduction	235	Fiber-Reinforced Material	302
Physical and Chemical Principles of		Gradient Materials	302
Electrolytic Crystallization of Dendrite		Nanopowder-Polymer Composites	303
Deposits	236	Thin Film Technique	304
Electrolysis of Aqueous Solutions	240	Semiconductors	305
Copper Precipitation in Industrial		Electrical Storage Systems	306
Electrolysis	245	Miniaturized Systems	307
Reduction from Solution Through Film of		References	307
Surfactants	248	10. Powders With Quasicrystalline Structure	
Special Methods of Production of Metal		<i>Nikolay A. Yefimov</i>	
Powders Recovered from Spent Solutions	250	Discovery and Structure of Quasicrystalline	
Production of Metal Multicomponent Alloy		Materials	313
Powders	252	Properties and Application of QC Materials	313
Powder Production Using the Method of		Manufacturing Technique of QC Powders	314
Zone Electrochemistry	254	Mechanical Alloying	314
Contact Displacement Method		Vaporization by Laser Beam	315
(Cementation)	254	Crushing of Ingots	315
Production of Powders by Electrolysis		Centrifugal Atomization	316
from Melts	258	Gas-Atomized Powders	317
Amalgam Metallurgy Method	263	Water-Atomized Powders	318
Workplace Atmospheres Safety	267	References	320
References	268	Further Reading	321

11. Porous Powders and Metallic Foams

Oleg D. Neikov

Introduction	323
Porous Powder	323
Material Selection	324
Powder Preparation	324
Compaction Methods	325
Sintering	326
Mechanical Properties	326
Applications	326
Metallic Foams	328
Closed-Cell Metallic Foams	330
Foaming Agents	334
Open-Cell Metallic Foams	336
Materials	338
References	346

12. Powders for Composites

Oleg D. Neikov

Introduction	351
Manufacture of Composite Powders	351
Nickel-Clad Aluminum Powders	351
Aluminum-Based Composite Powders	352
Copper-Based Composite Powders	353
Titanium-Based Composite Powders	355
Refractory-Based Composite Powders	355
Zinc-Rich Composite Powders	355
Carbon Nanotube-Reinforced Metal Composite Powders	357
Graphene-Oxide Composite Powders	360
Manufacture of Composites	363
Composite Manufacturing Methods	363
Aluminum-Based Composite	363
Copper-Based Composite	364
Refractory Metal and Carbide-Based Composites	366
References	368
Further Reading	372

13. Powders for Additive Manufacturing Processing

Oleg D. Neikov

Introduction	373
Principles of AM	374
Rapid Prototyping	374
Selective Laser Melting (SLM)	375
Direct Energy Deposition (DED) and Powder Bed Fusion (PBF) AM Processes	375
Powders for AM	376
Powder Characterization and Testing	377
Powder Properties	381
Applications of AM	384

Aluminum and Magnesium Alloys	384
Titanium Alloys	387
Nickel Base Alloys	392
Conclusion	395
References	395
Further Reading	399

Section C Processing of Powders

14. Processing of Powders and Processing Equipment

Oleg D. Neikov

Introduction	403
Dehydration	403
Thickening in Cyclones	405
Conical and Cylindrical Thickeners	407
Filtration	408
Centrifugation	410
Cartridge Vacuum Filter	411
Rotary Disk Filter	412
Filter Press	413
Thermal Drying	413
Introductory Conceptions	413
Drying Characteristic Curve	414
Drying Rate	415
Dryer Selection and Design	415
Pneumatic Convective Dryer	416
Spray Drying	419
Convective Dryer With Fluidized Bed	421
Shaker Dryer	422
Drum Contact Dryer	423
Vacuum Dryers	424
Powder Classification by Size	424
Sieving Methods	426
Sieving Apparatus	428
Round Vibrating Sifters	429
Air-assisted Sieving Machine	431
Air Separation	432
Hydraulic Classification	433
Mixing	435
Powder Mixers	436
Mechanism of Powder Mixing	440
Passivation Techniques	442
Passivation Methods	444
Powder Spheroidization by Thermal Plasma Processes	446
Proportioning, Packaging, and Interstage Transport	449
Proportioning	449
Packaging	451
Interstage Transport	452
References	454
Further Reading	455

Section D Production of Non-Ferrous Metal Powders

15. Production of Aluminum Powders

Victor G. Gopienko

Introduction	459
Gas Atomization of Aluminum Powder	460
Production of Aluminum Granules	465
Production of Flakes, Pigments, and Pastes	468
Nickel-Clad Aluminum Powders	474
Properties of Nickel-Clad Aluminum Powders	474
Aluminum Scrap Recycling	474
Waste Aluminum Foil Recycling	474
Processing of Recycled Aluminum to Granules	477
The Main Application Fields for Aluminum Powders	477
References	480

16. Production of Aluminum Alloy Powders

Oleg D. Neikov

Introduction	481
Mechanical Alloying	482
Rapid Solidification Process	487
Centrifugal Atomization	493
RSR Process	493
Spinning Cup Water Granulation Process	494
Gas Atomization	497
Melt Spinning Technique	503
Water Atomization	505
Recycling of Secondary Aluminum	511
Elevated Temperature Aluminum Alloys	513
Al-Mg System Alloys	516
Al-Zn-Mg System Alloys	516
Spray Forming	521
Other Technologies	526
References	527
Further Reading	531

17. Production of Magnesium and Magnesium Alloy Powders

Oleg D. Neikov and Victor G. Gopienko

Introduction	533
Production Methods	533
Mechanical Crushing	533
Melt Atomization	535
Production of Magnesium Granules	538

Gas-Phase Method	539
Electrolysis	540
Plasma-Transferred Arc Melting Process	540
Applications	541
References	546

18. Production of Titanium and Titanium Alloy Powders

Oleg D. Neikov and Victor G. Gopienko

Introduction	549
Chemical Reduction	550
Sodium Reduction Method (Hunter Process)	550
Armstrong Process	550
Magnesium Reduction Method (Kroll Process)	551
Calcium Hydride Reduction Process	553
Hydrogenation/Dehydrogenation (HDH) Process	553
Plasma-Rotating Electrode Process (PREP)	554
Gas Atomization	555
Electrolysis of Titanium Compounds	558
FFS-Cambridge Process	559
MER Process	559
Chinuka Process	560
Electrolytic Refining of Titanium	561
Amalgam Metallurgy Technique	562
Other Methods	563
TIRO Process	563
Method of Disproportionation of Lower Titanium Halogenides	564
CSIR Process	564
Chemical Synthesis of Nanosized Titanium Powders	565
Mechanical Alloying	565
Applications	565
Titanium Powder Process Selection	567
Titanium Powder-Based Materials Selection	567
References	568
Further Reading	570

19. Production of Copper and Copper Alloy Powders

*Oleg D. Neikov, Stanislav S. Naboychenko
and Irina B. Murashova*

Introduction	571
Atomization	572
Atomization of Copper Powders	572
Atomization of Copper Alloy Powders	576
Production of Copper Powder by Solid Phase Reduction of Copper Oxide	581
Oxidation of Copper Powder	581
Reduction of Copper Oxide	582

Postreduction Procedure	583	21. Production of Nickel and Nickel-Alloy Powders	<i>Oleg D. Neikov, Stanislav S. Naboychenko and Irina B. Murashova</i>
Recycling for Initial Materials	585		
Production of Copper and Copper Alloy Powders by Electrolysis	585	Introduction	633
Electrodeposition of Copper Powders	585	Carbonyl Process of Nickel Powder Production	633
Electrolytic Powder Production	586	Nickel Tetracarbonyl Formation and Decomposition	634
Properties of Electrolytic Copper Powders	588	Commercial Technique	635
Applications of Electrolytic Powders	592	Health and Environmental Protection Measures in Carbonyl Nickel Production	638
Production of Copper Powders by Hydrometallurgical Processing	593	Powder Properties and Applications	638
Production of Copper Powders by the Reduction of Copper Oxide	594	Hydrometallurgical Processing	644
Copper Precipitation from Sulfuric Acid Media	595	Feed Processing	644
Copper Precipitation from Ammonia Media	599	Leaching	645
Copper Precipitation from Organic Phases	600	Copper Removal	646
Anhydride Process	601	Oxidation and Hydrolysis	646
Cementation	601	Hydrogen Reduction by Autoclave Processing	646
Electrowinning	602	Sulfide Precipitation	649
Oxide Dispersion Strengthened (ODS) Copper Powder Production	603	Powders Covered by Nickel	650
Manufacture	603	Autoclave Processing of Nickel Hydroxide and Carbonate Pulps	651
Properties of ODS Copper Powders	604	Atomization	652
Applications of ODS Copper Powders	604	Hardfacing Powders	652
Applications of Copper and Copper Alloy Powders	607	Superalloy Powders	654
Workplace Atmospheres Safety	612	Mechanical Alloying	657
References	613	Production of Nickel Powder by Reduction Processes	661
20. Production of Zinc, Cadmium, and Their Alloy Powders		Solid-Phase Reduction	661
<i>Irina V. Frishberg</i>		Reduction by Organic Reagents	662
Production of Zinc Powders	615	Production of Nickel Powder by Electrolysis	663
Evaporation-Condensation Method	615	Peculiarity of Nickel Alloy Powders by Using in Additive Manufacturing	664
Melt Atomization	620	References	667
Electrochemical Method	621	22. Production of Cobalt and Cobalt-Alloy Powders	
Other Methods	624	<i>Oleg D. Neikov, Stanislav S. Naboychenko and Irina B. Murashova</i>	
Production of Cadmium Powders	625	Introduction	669
Production of Cadmium and Zinc Alloy Powders	625	Hydrometallurgical Process	669
Safety Measures in Zinc and Cadmium Powder Production and Handling	626	Leach Autoclave Method	669
Applications	628	Solid-Phase Reduction	673
Zinc Powders in Protective Zinc-Rich Coatings	628	Atomization	674
Anticorrosive Zinc-Rich Coatings for Roll and Sheet Steel and Metal Wear	630	Carbonyl Processing	676
Sherardizing (Thermodiffusion Galvanizing)	630	Production of Cobalt and Cobalt-Alloy Powders by Electrolysis	678
Mechanical Plating	630	Amalgam Techniques	681
Recycling of Tungsten Carbide Powders	631	Other Methods	681
Implant Production	631	Health and Environmental Protection Measures	683
References	631		

References	684	Other Methods	771
Further Reading	684	Lead Zirconate Titanate (PZT)	
		Ceramics	772
		Workplace Atmospheres Safety	773
23. Production of Refractory Metal Powders		Indium	774
<i>Oleg D. Neikov, Stanislav S. Naboychenko, Irina B. Murashova and Nikolay A. Yefimov</i>		Workplace Atmospheres Safety	776
Introduction	685	Thallium	776
Production of Tungsten and Tungsten Carbide Powders	686	Workplace Atmospheres Safety	776
Tungsten Metal Powders	686	Ruthenium	778
Tungsten Carbide Powders	707	Workplace Atmospheres Safety	778
Tungsten Carbide Electrical Contacts	712	Production of Rare Earth Metal-Alloy Powders	778
Diamond Tools	714	Physical Properties	779
Hardfacing	714	Chemical Properties	781
Cemented Carbides	717	Sources of Raw Material	781
Production of Cemented Carbide Powders	717	Methods of RE Elements Separation	782
Cemented Carbide Compaction	719	Initial Compounds for Metals Production	785
Sintering and Secondary Operations	721	Electrochemical Methods	786
Recycling	721	Metallothermic Methods	787
Molybdenum Metal Powders	723	Lanthano-Thermic Method	787
Production of Molybdenum Powders	723	Carbothermic Method	788
Properties of Molybdenum and Molybdenum Alloy Powders	725	Refinement of RE by Distillation	788
Workplace Atmospheres Safety	733	Workplace Atmospheres Safety	788
Niobium and Tantalum	734	Range of Applications	789
Niobium and Niobium Alloys	734	Beryllium	798
Tantalum	742	Physical Properties	798
Tantalum Carbide	744	Beryllium Compounds	798
Workplace Atmosphere Safety	747	Sources of Raw Material	800
Rhenium	747	Magnesium-Thermal Reduction of Beryllium Fluoride	800
Production of Rhenium Powder	747	Electrolysis From Beryllium Chloride	
Rhenium Alloys	750	Electrolyte	800
Applications	750	Production of Leafed Beryllium by Electrorefining From Melts	801
References	751	Beryllium Powder Production	801
		Beryllium Oxide Powder Production	804
		Powder Consolidation and Production of Wrought Products	804
24. Production of Rare Metal Powders		Wrought Product Forms	806
<i>Oleg D. Neikov, Stanislav S. Naboychenko and Irina B. Murashova</i>		Applications of Beryllium	807
Introduction	758	Workplace Atmosphere Safety	810
Vanadium	758	Scandium	810
Workplace Atmospheres Safety	765	Physical Properties	810
Zirconium	766	Sources of Raw Material	811
Reduction of Zirconium Tetrachloride by Magnesium	767	Scandium Production	812
Reduction of Potassium Hexafluorozirconate by Sodium	768	Applications	813
Reduction by Calcium or Calcium Hydride	768	Radioactive Metals: Thorium and Uranium	819
Production of Zirconium Powders by Electrolysis	768	Physical and Chemical Properties	819
Amalgam Method	770	Thorium Powder Production	820
Combustion Synthesis of Zirconium Nitrides	771	Uranium Powder Production	821
		Applications	822
		Safety Engineering	824
		References	825
		Further Reading	829

25. Production of Noble Metal Powders

Oleg D. Neikov, Stanislav S. Naboychenko and Irina B. Murashova

Introduction 831

Production of Silver Powders 832

 Chemical Processes 832

 Atomization 833

 Mechanical Comminution Processes 833

 Production of Silver Powder From Solution by Electrolysis 834

 Production of Silver Powder by Chemical Reduction With Electrochemical Regeneration of the Reducer 835

 Production of Fibrous Dendritic Silver Residue From Molten Electrolytes 835

Production of Gold Powders 835

Production of Platinum-Group Powders 837

 Powders of Platinum Metals 837

 Chemical Reduction 839

 The Carbonyl Process 840

 Autoclave Precipitation 841

Production of Noble Metal Alloys Powders 842

Production of Platinum Black Deposit (Niello) 844

 Synthesis of Palladium Nanopowders by Methods of Zone Electrochemistry 845

 Producing of Noble Nanoparticles in Metal-Organic Frameworks Pores 845

 Noble Metals Application in Implantable Medical Devices 845

References 846

26. Production of Powders of Lead, Tin, Bismuth, and Their Alloys

Oleg D. Neikov, Stanislav S. Naboychenko and Irina B. Murashova

Introduction 847

Lead Powder Production 847

 Atomization 847

 Ball Milling 848

 Electrolysis 850

Tin Powder Production 850

Bismuth Powder Production 854

Health and Environment Protection 854

Applications 858

References 860

Further Reading 861

**Section E
Safety Engineering in the Production of Powders**

27. Safety Engineering in the Production of Powders

Oleg D. Neikov

Introduction 865

Dangerous and Harmful Manufacturing Factors 866

 Dust, Gaseous, and Vapor Emissions 866

 Ambient Noise and Vibration 866

 Heat Radiation 866

 Electrostatic Electricity 866

Properties of Powders 868

 Adhesion 868

 Hygroscopicity and Wettability 868

 Abrasiveness 869

 Inflammability and Explosivity of Powders 869

 Thermophysical Properties 875

Technique for the Prevention of Exposure Hazards 879

 Workplace Exposure Limits 879

 Common Demands to Production Area, Equipment, and Processes 881

 Explosion and Fire Safety 885

 Quenching Means 886

 Dust Explosion Protection Systems 887

 Localization of Powder-Gas Emissions 892

 Definition of the Local Exhaust Capacity 901

Clarification of Recirculated Water 918

 Mechanical Clarification Methods 918

 Chemical Treatment Methods 919

 Ion-Exchange Method 920

 Sorption, Evaporation, and Flotation Methods 922

Dust and Gas Cleaning 923

Waste Products Utilization, Storing, and Transportation 924

 Waste Utilization 924

 Storing and Transportation of Hazardous Powders 925

References 927

Further Reading 928

Appendix 1: Methods of Powder Characterization and Testing 929

Appendix 2: Standards and Metal Powder Specifications 933

Abbreviations and Symbols 935

Index 943
