

Sedimentary Structures

Fourth Edition

John Collinson

Consultant, formerly University of Bergen and Keele University

Nigel Mountney

University of Leeds

DUNEDIN

EDINBURGH ♦ LONDON

Contents

Preface	ix
Acknowledgements	xi
1 Introduction to the study of sedimentary structures	1
1.1 The nature of this book	1
1.2 The wider geological context of sedimentary structures	2
1.3 Sedimentary structures and science	3
Study techniques	5
2 Bedding	7
2.1 The nature of bedding	7
2.2 The significance of bedding	17
Study techniques	20
3 Basic properties of fluids, flows and sediment	23
3.1 Introduction	23
3.2 Properties of low-viscosity fluids and flows	23
3.3 Waves	29
3.4 Properties of sediments moved by flows	31
3.5 Erosion	32
3.6 Modes of sediment transport	35
3.7 Sediment gravity flows	36
3.8 Pyroclastic density currents	45
Study techniques	46
4 Erosional structures	49
4.1 Introduction	49
4.2 Sole marks	49
4.3 Small-scale structures on modern and ancient upper surfaces	60
4.4 Erosional features in vertical section	64
Study techniques	70
5 Depositional structures in muds, mudstones and shales	71
5.1 Introduction	71
5.2 Structures and lamination	73
Study techniques	77
6 Depositional structures of sands and sandstones	79
6.1 Aqueous ripples and cross lamination	79
6.2 Aqueous dunes, sandwaves, bars and cross bedding	95
6.3 Flat beds and parallel lamination	116
6.4 Undulating smooth surfaces and lamination	119
6.5 Hummocky and swaley cross stratification	119
6.6 Massive sand beds	121

CONTENTS

6.7	Normally graded beds, inverse grading, the Bouma sequence and hybrid-event beds	122
6.8	Aeolian bedforms and lamination	126
	Study techniques	149
7	Depositional structures in gravels, conglomerates and breccias	151
7.1	Introduction	151
7.2	Classification	151
7.3	Morphology and general settings of gravel deposition	153
7.4	Textures, fabrics, and structures: their mode of formation	156
7.5	Processes of formation of mass properties and structures	171
7.6	Uses of structures	173
	Study techniques	176
8	Depositional structures of chemical and biological origin	179
8.1	Introduction	179
8.2	Chemical precipitation	179
8.3	Precipitation and binding of sediment by organisms	187
8.4	Early cementation	196
8.5	Other bedding phenomena in limestones	198
	Study techniques	199
9	Structures due to deformation and disturbance	201
9.1	Introduction	201
9.2	Physically induced soft-sediment deformation	201
9.3	Chemically induced disturbance	226
9.4	Biogenic sedimentary structures: trace fossils	240
	Study techniques	267
10	Assemblages of structures and environmental interpretation	269
10.1	Introduction	269
10.2	Mapping of modern environments	269
10.3	Measurement of sections in rock successions	270
10.4	Interpretation of vertical sequences in rocks	272
10.5	Key stratigraphic surfaces	275
10.6	Interpretation of lateral relationships in sedimentary rocks	277
	Study techniques	281
Appendix 1	Directional data: collection, display, analysis and interpretation	291
Appendix 2	Sampling and preserving unconsolidated sediments	296
Appendix 3	Methods for studying present-day environments	297
Appendix 4	Techniques for the study of trace fossils	300
Appendix 5	Techniques for sedimentary logging	302
Appendix 6	Key to common sedimentary lithologies and structures	305
Bibliography		307
Index		321
