Contents

Preface	xvii
Part I: Materials and Methods: Design and Fabrication	1
1 The Science of Molecular Precursor Method	3
<i>Hiroki Nagai and Mitsunobu Sato</i>	
1.1 Metal Complex	4
1.2 Molecular Precursor Method	6
1.3 Counter Ion (Stability)	6
1.4 Conversion Process from Precursor Film to Oxide Thin Film	8
1.5 Anatase–Rutile Transformation Controlled by Ligand	8
1.6 Homogeneity	11
1.7 Miscibility	13
1.8 Coatability (Thin Hydroxyapatite Coating of Ti Fiber Web Scaffolds)	13
1.9 Oxygen-Deficient Rutile Thin Films	15
1.10 Cu Thin Film	16
1.11 Applications Using the Molecular Precursor Method	20
1.12 Conclusion	22
References	23
2 Cold Spray—Advanced Coating Process and 3D Modeling	29
<i>Muhammad Faizan-Ur-Rab, Saden H. Zahiri and Syed H. Masood</i>	
2.1 Introduction	30
2.1.1 Cold Spray Equipment	31
2.1.1.1 CGT KINETIKS 3000 CS System	31
2.1.1.2 Plasma Giken PCS 1000 System	32
2.1.1.3 Impact Innovations ISS 5/8 and 5/11 CS Systems	33

2.1.2	Applications of Cold Spray Coatings	35
2.2	3D Numerical Modeling of Cold Spray Coating	36
2.2.1	Computational Domain and Boundary Conditions in Numerical Model	37
2.2.2	Three-Dimensional Grid	40
2.2.3	Particle-Fluid Interaction	41
2.3	Experimental Methods of Cold Spray Coatings for Validation of 3D Model	44
2.3.1	Measurement of Substrate's Temperature	44
2.3.2	Particle Image Velocimetry (PIV)	45
2.4	Results and Discussions	48
2.4.1	3D Model Calibration	48
2.4.2	Effect of Propellant Gas	51
2.4.3	Effect of Nozzle Length	53
2.4.4	Particle's Temperature	56
2.5	Conclusion	59
	References	60
3	Effects of Laser Process Parameters on Overlapped Multipass/Multitrack Hardened Bead Parameters of Ti-6Al-4V Titanium Alloy Using Continuous-Wave Rectangular Beam	65
	<i>D.S. Badkar</i>	
3.1	Introduction	66
3.2	Experimental Methodology	70
3.2.1	Principle of Rectangular Beam	70
3.2.2	Materials Used and Experimental Set-Up	70
3.2.3	Fixture Fabrication	73
3.2.3.1	Bottom Plate	74
3.2.3.2	The Top Plate	75
3.2.4	Specimen Preparation	76
3.2.5	Phase Transformations of Ti-6Al-4V During Laser Transformation Hardening	78
3.2.5.1	Laser Heating	78
3.2.5.2	Cooling or Self Quenching	78
3.3	Results and Discussion	78

3.3.1	Effect of Laser Process Parameters on Overlapped Multipass/Multitrack Hardened Bead Parameters	78
3.4	Conclusions	82
	Acknowledgment	82
	References	82
4	Dimensionally Stable Lead Dioxide Anodes Electrodeposited from Methanesulfonate Electrolytes: Physicochemical Properties and Electrocatalytic Reactivity in Oxygen Transfer Reactions	85
	<i>Olesia Shmychkova, T. Luk'yanenko and A. Velichenko</i>	
4.1	Introduction	86
4.2	Chemical Composition of Coatings	89
4.3	Electrocatalytic Properties of Materials	95
4.3.1	p-Nitroaniline Oxidation	98
4.3.2	p-Nitrophenol Oxidation	100
4.3.3	Oxidation of Salicylic Acid and its Derivatives	101
4.4	Electrode Endurance Tests	108
4.5	Conclusions	116
	References	118
5	Polycrystalline Diamond Coating Protects Zr Cladding Surface Against Corrosion in Water-Cooled Nuclear Reactors: Nuclear Fuel Durability Enhancement	123
	<i>Irena Kratochvílová, Radek Škoda, Andrew Taylor, Jan Škarohlíd, Petr Ashcheulov and František Fendrych</i>	
5.1	Introduction	124
5.2	Zr Alloy Surface Corrosion—General Description	128
5.3	Growth of Polycrystalline Diamond as Anticorrosion Coating on Zr Alloy Surface	131
5.4	Properties of PCD-Coated Zr Alloy Samples Processed in Autoclave	135
5.4.1	Oxidation of Autoclave-Processed PCD-Coated Zr Samples	135
5.4.2	Composition Changes of PCD-Coated Zr Alloy Compared to Autoclaved Zr Alloy and PCD-Coated Zr Alloy	137

5.4.2.1	Capacitance Measurements, NanoESCA, X-Ray-Photoelectron Spectroscopy, Neutron Transmission, and Mass Spectrometry	137
5.4.2.2	Raman, SEM, and SIMS Analysis of the Autoclave-Processed Samples	143
5.4.3	Mechanical and Tribological Properties of Autoclaved PCD Layer-Covered Zr Alloy	145
5.4.4	Radiation Damage Test of Autoclaved PCD-Covered Zr Alloy Sample: Ion Beam Irradiation	147
5.5	PCD Coating Increases Operation Safety and Prolongs the Zr Nuclear Fuel Cladding Lifetime—Overall Summaries	148
5.6	Conclusion	153
	Acknowledgments	154
	References	154
6	High-Performance WC-Based Coatings for Narrow and Complex Geometries	157
	<i>Satish Tailor, Ankur Modi and S. C. Modi</i>	
6.1	Introduction	157
6.2	Experimental	159
6.2.1	Feedstock Powder	159
6.2.2	Substrate Preparation and Coating Deposition	159
6.2.3	Why Choosing 45° and 70° Angles to Design the Connectors	163
6.2.4	Characterizations	163
6.3	Results and Discussion	164
6.3.1	Coating Mechanism Behind the Uniform Coating Properties at Both Spray Angles 45° and 70°	164
6.3.2	Coating Microstructures	164
6.3.3	Microhardness of the “As-Sprayed” Coatings	166
6.3.4	X-Ray Diffraction	167
6.3.5	Residual Stress Analysis	169
6.3.6	Adhesion Strength of the Coatings	171
6.4	Conclusions	172
	References	172

Part II: Coating Materials Nanotechnology	175
7 Nanotechnology in Paints and Coatings	177
<i>Emmanuel Rotimi Sadiku, Oluranti Agboola, Ibrahim David Ibrahim, Peter Apata Olubambi, BabulReddy Avabaram, Manjula Bandla, Williams Kehinde Kupolati, Jayaramudu Tippabattini, Kokkarachedu Varaprasad, Stephen Chinenyeze Agwuncha, Jonas Mochane, Oluyemi Ojo Daramola, Bilainu Oboirien, Taoreed Adesola Adegbola, Clara Nkuna, Sheshan John Owonubi, Victoria Oluwaseun Fasiku, Blessing Aderibigbe, Vincent Ojijo, Regan Dunne, Koena Selatile, Gertude Makgatho, Caroline Khoathane, Wshington Mhike, Olusesan Frank Biotidara, Mbuso Kingdom Dlundu, AO Adeboje, Oladimeji Adetona Adeyeye, Abongile Ndamase, Samuel Sanni, Gomotsegang Fred Molelekwa, Periyar Selvam, Reshma Nambiar, Anand Babu Perumal, Jarugula Jayaramudu, Nnamdi Iheaturu, Ihuoma Diwe and Betty Chima</i>	
7.1 Introduction	178
7.1.1 Paint and Coating	178
7.1.2 Nanopaints and Nanocoatings	180
7.1.2.1 Some Uses of Nanopaints in Different Materials	181
7.1.2.2 Nanomaterials in Paints	183
7.1.3 Types of Nanocoating	189
7.1.3.1 Superhydrophobic Coating	190
7.1.3.2 Oleophobic/Hydrophobic Coating	191
7.1.3.3 Hydrophilic Coatings	191
7.1.3.4 Ceramic, Metal and Glass Coatings	192
7.2 Application of Nanopaints and Nanocoating in the Automotive Industry	195
7.3 Application of Nanopaints and Nanocoating in the Energy Sector	196
7.4 Application of Nanocoating in Catalysis	198
7.5 Application of Nanopaints and Nanocoating in the Marine Industry	200

7.6	Applications of Nanopaints and Nanocoating in the Aerospace Industry	200
7.7	Domestic and Civil Engineering Applications of Nanopaints and Coating	202
7.8	Medical and Biomedical Applications of Nanocoating	205
7.8.1	Antibacterial Applications of Nanocoating	205
7.9	Defense and Military Applications of Nanopaints and Coatings	227
7.10	Conclusion	228
7.11	Future Trend	228
	References	229
