On the stability of metastable phases in nanoscaled TiN/(Al,Ti)N multilayers

Ulrike Ratayski

TECHNISCHE UNIVERSITÄT BERGAKADEMIE FREIBERG

Contents

Introduction 1

1 Titanium - Aluminium - Nitride 3
1.1 Overview - the historic role of $Ti_{1-x}Al_xN$ 3
1.2 Crystalline phases in the Ti-Al-N system 4
1.2.1 The stable modifications of TiN and AlN 4
1.2.2 Metastable phases in the TiN-AlN system 6
1.3 Thermodynamic assessment of the TiN-AlN system 8
1.3.1 Thermodynamic stability of TiN and AlN modifications 8
1.3.2 The pseudobinary phase diagram of TiN - AlN 10
1.4 A brief review on $Ti_{1-x}Al_xN$ thin films and TiN/AlN multilayers 14
1.4.1 Monolithic $Ti_{1-x}Al_xN$ coatings 14
1.4.2 TiN/AlN multilayer coatings 19

2 X-ray scattering by low-dimensional structures 21
2.1 Wide-angle X-ray scattering 21
2.1.1 X-ray line profile fitting 22
2.1.2 Microstructure parameters enclosed in the peak position 23
2.1.3 Microstructure parameters enclosed in the integral width 29
2.2 Small-angle X-ray scattering 30
2.2.1 The dynamical (optical) theory applied to low-dimensional structures 31
2.2.2 The semikinematical theory 34
2.2.3 Effect of interface corrugation on specular X-ray reflection 35
2.2.4 Diffusely scattered intensities 36

3 Experimental details 39
3.1 Preparation by cathodic arc evaporation 39
3.1.1 $Ti_{1-x}Al_xN$ monolithic coatings 39
3.1.2 TiN/(Al,Ti)N multilayer coatings 41
3.2 Laboratory details on the heat treatment procedure 42

3.3 Electron probe microanalysis 44
3.4 Laboratory setup for X-ray diffraction experiments 45
3.5 Investigations by transmission electron microscopy 47
3.5.1 Energy-dispersive X-ray spectroscopy 47
3.5.2 Electron-energy loss spectroscopy 48
3.6 In-situ characterization by synchrotron experiments 52

4 Microstructure and properties of monolithic $Ti_{1-x}Al_xN$ thin films . 55
4.1 Microstructure of as-deposited $Ti_{1-x}Al_xN$ thin films 55
4.1.1 Effect of the sample position on the chemical composition and the deposition rate 56
4.1.2 Phase composition and microstructure properties 59
4.1.3 Mechanical properties of as-deposited monolithic $Ti_{1-x}Al_xN$ coatings 71
4.2 Thermal stability of $Ti_{1-x}Al_xN$ coatings deposited by CAE 72
4.2.1 The fcc-$Ti_{1-x}Al_xN$ phase affected by the annealing temperature . . 72
4.2.2 Reduction of the chemical fluctuations in $Ti_{1-x}Al_xN$ coatings . . . 75
4.2.3 Mechanical properties 78

5 Preparation of periodical composition fluctuations in $Ti_{1-x}Al_xN$ coatings 81
5.1 Implementation of periodical composition fluctuations 81
5.2 Design and development of periodic structure model applied to SAXS analysis 82
5.3 TiN/(Al,Ti)N multilayers prepared at identical cathode currents 84
5.3.1 Chemical and phase composition of as-deposited multilayers 86
5.3.2 Microstructure of Ti- and Al-rich domains 87
5.4 The role of the cathode current applied to the Al cathode 94
5.4.1 Chemical and phase composition affected by I_{Al} 95
5.4.2 Solubility of Al in fcc-(Ti,Al)N affected by I_{Al} 97
5.4.3 Multilayer architecture of TiN/(Al,Ti)N affected by I_{Al} 99
5.4.4 Interfaces in nanoscaled TiN/(Al,Ti)N coatings 107
5.5 The role of the cathode current applied to the Ti cathode 108
5.5.1 Chemical and phase composition affected by I_{Ti} 109
5.5.2 Solubility of Al in the fcc-(Ti,Al)N affected by I_{Ti} 112
5.5.3 Multilayer architecture affected by I_{Ti} 114
5.5.4 The origin of the pseudo cubic phase in TiN/(Al,Ti)N multilayers . 117

5.6 Formation of lattice strains in TiN/AlN multilayer coatings 128

6 The thermal stability of TiN/(Al,Ti)N multilayers 133
6.1 Covered chemical composition and temperature region 133
6.2 Strain-induced stabilization of fcc-(Ti,Al)N in multilayer coatings 135
6.2.1 Thermally activated solubility of Al in the fcc-(Ti,Al)N phase . . . 136
6.2.2 Conservation of the multilayer architecture 138
6.2.3 Effect of the local lattice strain in multilayers 140
6.3 Thermally activated transition of metastable phases in TiN/(Al,Ti)N coatings 143
6.3.1 Thermal activated microstructure evolution in TiN/(Al,Ti)N multilayers 143
6.3.2 Conservation of the multilayer architecture 148

7 Conclusions and perspectives 151

Appendix I

A The elastic modulus body III

B Dislocation contrast factors V

C Species flux affected by I_{Al} and I_{Ti} VII
