<i>Preface</i>	page xiii
<i>Acknowledgements</i>	xiv
<b>1 What Is Fourier Analysis?</b>	1
1.1 What Does This Book Set Out to Do?	2
1.2 Choice of Software	4
1.3 Structure of the Book	5
1.3.1 Examples and Exercises	6
1.4 What Previous Mathematics Do You Need?	6
<b>2 Covariance-Based Approaches</b>	9
2.1 Covariance and Correlation	9
2.1.1 Interpreting the Correlation Coefficient	10
2.1.2 Limitations	13
2.2 Lagged Correlation	13
2.2.1 Same-Sense Cross-Correlation	15
2.2.2 Opposite-Sense Cross-Correlation	18
2.3 Autocorrelation	20
2.4 Simple Linear Regression	23
2.5 Periodic Features: Correlation and Regression with Sinusoids	24
2.6 What Correlation and Regression ‘See’	27
2.7 Summary	29
<b>3 Fourier Series</b>	31
3.1 What Are Fourier Series?	32
3.2 Orthogonality	32
3.2.1 Clarification of Orthogonality	33
3.2.2 Alternative Justification of Fourier Series	33
3.3 Fourier Series for General Time Function	34

3.3.1	Alternative Justification Revisited	35
3.3.2	Angular Frequency	36
3.4	Symmetry	36
3.4.1	Pure Odd- and Even-Symmetry	37
3.4.2	General Mixed Symmetry	39
3.4.3	Symmetry and Phase	41
3.5	General Properties of Fourier Series	41
3.5.1	Symmetry and Harmonic Composition	41
3.5.2	Linearity	41
3.6	Complex Fourier Series	42
3.6.1	Negative Frequencies	43
3.6.2	Real Data and Frequency Components	43
3.6.3	Complex Data	44
3.7	Summary	45
<b>4</b>	<b>Fourier Transforms</b>	<b>46</b>
4.1	Frequency Functions	46
4.2	The Fourier Transform	47
4.2.1	Fourier Transform Notation	48
4.2.2	Angular Frequency	49
4.2.3	Integrability	49
4.3	General Properties of the Fourier Transform	50
4.3.1	Symmetry	50
4.3.2	Linearity	50
4.4	Fourier Transforms of Sinusoids	51
4.4.1	The Dirac $\delta$ -Function	51
4.4.2	Fourier Transforms of Sines and Cosines	53
4.4.3	Fourier Transform of a General Sinusoid	53
4.4.4	From Continuous to Discrete Functions	55
4.5	The Discrete Fourier Transform	56
4.5.1	Derivation of the DFT from Fourier Series	56
4.6	The DFT as a Linear Transformation	59
4.6.1	The DFT Matrix and the Fast Fourier Transform	59
4.6.2	The Inverse DFT	61
4.6.3	Linearity of the DFT	61
4.7	The DFT Frequency Spectrum	62
4.8	Nyquist–Shannon Sampling Theorem	64
4.8.1	Resolving the Nyquist Frequency	65
4.9	Summary	66

<b>5</b>	<b>Using the FFT to Identify Periodic Features in Time-Series</b>	<b>69</b>
5.1	The Standard FFT	69
5.1.1	Other Implementations of the FFT	70
5.2	Time-Series with Few Frequencies	70
5.2.1	Preliminary Investigation	71
5.2.2	Frequency Spectrum, FFT	71
5.2.3	Amplitude Spectrum	73
5.2.4	Power Spectrum	76
5.2.5	Further Comments	77
5.3	Time-Series with Many Frequencies	78
5.3.1	Initial Investigation	78
5.3.2	Power Spectrum	79
5.3.3	Further Comments	82
5.4	Time-Series with Trends	83
5.4.1	Initial Investigation	83
5.4.2	Detrending the Data	85
5.5	Time-Series with Noisy Spectra	87
5.5.1	Power Spectrum	87
5.6	Summary	89
<b>6</b>	<b>Constraints on the FFT</b>	<b>92</b>
6.1	Minimum Resolvable Frequency and Low-Frequency Features	92
6.1.1	Illustration: Low and Zero Frequency Features	92
6.1.2	Windowing (Tapering)	94
6.2	Maximum Resolvable Frequency and Above-Nyquist Features	96
6.2.1	Aliasing	97
6.2.2	Illustration: Aliased Frequency	98
6.3	Resolving Intermediate Non-Harmonic Frequencies	99
6.3.1	Linear Dependence of Intermediate Frequencies	100
6.3.2	Illustration: Tidal Harmonics	101
6.3.3	Sinusoidal Dummy Data	102
6.4	Re-Windowing Data, Padding	105
6.4.1	Illustration: Tidal Harmonics	105
6.5	Resolving Adjacent Frequencies	107
6.5.1	Illustration: Tidal Harmonics	108
6.6	Missing Data	109
6.7	Summary	110

<b>7</b>	<b>Stationarity and Spectrograms</b>	112
7.1	Stationarity	112
7.1.1	Strong (Strict) Stationarity	112
7.1.2	Weak Stationarity	113
7.2	Short-Time Fourier Transform	113
7.2.1	Time and Frequency Resolutions of the STFT	114
7.2.2	Uncertainty Principle	114
7.3	Spectrograms	115
7.3.1	Overlapping Sections and Time–Frequency Resolution	115
7.3.2	Spectrogram: Stationary Data	116
7.3.3	Spectrogram: Non-Stationary Data	118
7.4	Summary	121
<b>8</b>	<b>Noise in Time-Series</b>	123
8.1	Noise Colour	123
8.1.1	White Noise	124
8.1.2	Red, Brownian and Pink Noise	124
8.1.3	Blue and Violet Noise	125
8.2	Statistical Characterisations	125
8.2.1	Autocorrelation and Autoregression	125
8.2.2	Autoregressive Noise Models	126
8.3	Power–Law Relationships	129
8.4	Real Data with Red-Noise	132
8.4.1	Autoregression and Autocorrelation	132
8.4.2	Power Law	134
8.5	Summary	135
<b>9</b>	<b>Periodograms and Significance</b>	137
9.1	The Schuster, or Classical, Periodogram	138
9.1.1	Vector Summation	141
9.1.2	Probability and Significance	141
9.1.3	Comparing the Schuster Periodogram to the DFT	143
9.2	Lomb–Scargle Periodogram	144
9.2.1	Probability and Significance	145
9.2.2	Effective Nyquist Frequency	146
9.2.3	Example: Exoplanet Orbital Period	147
9.2.4	Further Comments	150
9.3	FFT Spectra and Significance	150
9.3.1	Power, Energy and Variance	151
9.3.2	Proportion of Variance Explained	152

9.3.3	Significance, $p$ -value	154
9.3.4	Real Distinct-Frequency Data	156
9.4	Summary	157
<b>Appendix A</b>	<b>DFT Matrices and Symmetries</b>	<b>159</b>
<b>Appendix B</b>	<b>Simple Spectrogram Code</b>	<b>164</b>
