CONTENTS

List of Figures xi
List of Tables xii
Preface xvi

Overview of the Book xvii
What is New in this Edition? xvii
Formulae and Calculations xvii
Approaches to Power xviii
The pur2ppl Companion Package xviii

Acknowledgments xx

1 What is Power? Why is Power Important? 1
Review of Null Hypothesis Significance Testing 1
Effect Sizes and Their Interpretation 2
What Influences Power? 3
Central and Noncentral Distributions 6
Mistconceptions about Power 8
Empirical Reviews of Power 9
Consequences of Underpowered Studies 10
Overview of Approaches to Determining Effect Size
for Power Analysis 11
Post Hoc Power (a.k.a. Observed or Achieved
Power) 14
How Much Power? 16
Summary 17
Example 4.3: Comparing Dependent Correlations, One Variable in Common 61
Comparing Two Dependent Correlations (No Variables in Common) 63
Example 4.4: Comparing Dependent Correlations, No Variables in Common 64
Note on Effect Sizes for Comparing Correlations 67
Additional Issues 67
Summary 68

5 Between Subjects ANOVA (One and Two Factors) 69
Necessary Information 69
Factors Affecting Power 69
Omnibus Versus Contrast Power 70
Key Statistics 70
Example 5.1: One Factor ANOVA 72
Example 5.2: One Factor ANOVA with Orthogonal Contrasts 74
ANOVA with Two Factors 78
Example 5.3: Two Factor ANOVA with Interactions 79
Power for Multiple Effects 83
Additional Issues 86
Summary 87

6 Within Subjects Designs with ANOVA and Linear Mixed Models 88
Necessary Information 88
Factors Affecting Power 88
Key Statistics 90
Example 6.1: One Factor Within Subjects Design 91
Example 6.2: Sphericity Adjustments 93
Example 6.3: Linear Mixed Model Approach to Repeated Measures 93
Example 6.4: A Serious Sphericity Problem 94
Trend Analysis 94
Example 6.5: Trend Analysis 95
Example 6.6: Two Within Subject Factors Using ANOVA 96
Example 6.7: Simple Effects Using ANOVA 97
Example 6.8: Two Factor Within and Simple Effects Using LMM 98
Additional Issues 99
Summary 99
7 Mixed Model ANOVA and Multivariate ANOVA
   Necessary Information 100
   Factors Affecting Power 100
   Key Statistics 101
   ANOVA with Between and Within Subject Factors 101
   Example 7.1: ANOVA with One Within Subjects Factor and
     One Between Subjects Factor 101
   Example 7.2: Linear Mixed Model with One Within Subjects
     Factor and One Between Subjects Factor 103
   Multivariate ANOVA 104
   Example 7.3: Multivariate ANOVA 107
   Additional Issues 109
   Summary 111

8 Multiple Regression
   Necessary Information 112
   Factors Affecting Power 112
   Key Statistics 114
   Example 8.1: Power for a Two Predictor Model (R^2 Model
     and Coefficients) 117
   Example 8.2: Power for Three Predictor Models 121
   Example 8.3: Power for Detecting Differences between Two
     Dependent Coefficients 122
   Example 8.4: Power for Detecting Differences between Two
     Independent Coefficients 125
   Example 8.5: Comparing Two Independent R^2 Values 127
   Multiplicity and Direction of Predictor Correlations 128
   Example 8.6: Power(All) with Three Predictors 132
   Additional Issues 133
   Summary 134

9 Analysis of Covariance, Moderated Regression, Logistic
   Regression, and Mediation
   Analysis of Covariance 135
   Example 9.1: ANCOVA 136
   Moderated Regression Analysis (Regression with
     Interactions) 139
   Example 9.2: Regression Analogy (Coefficients) 143
   Example 9.3: Regression Analogy (R^2 Change) 144
   Example 9.4: Comparison on Correlations/Simple
     Slopes 145
Logistic Regression 147
Example 9.5: Logistic Regression with a Single Categorical Predictor 148
Example 9.6: Logistic Regression with a Single Continuous Predictor 149
Example 9.7: Power for One Predictor in a Design with Multiple Predictors 151
Mediation (Indirect Effects) 152
Example 9.8: One Mediating Variable 153
Example 9.9: Multiple Mediating Variables 154
Additional Issues 155
Summary 156

10 Precision Analysis for Confidence Intervals 157
Necessary Information 158
Confidence Intervals 158
Types of Confidence Intervals 159
Example 10.1: Confidence Limits around Differences between Means 159
Determining Levels of Precision 161
Confidence Intervals around Effect Sizes 163
Example 10.2: Confidence Limits around d 163
Precision for a Correlation 165
Example 10.3: Confidence Limits around r 165
Example 10.4: Precision for $R^2$ 167
Supporting Null Hypotheses 169
Example 10.5: “Supporting” Null Hypotheses 169
Additional Issues 170
Summary 171

11 Additional Issues and Resources 173
Accessing the Analysis Code 173
Using Loops to Get Power for a Range of Values 173
How to Report Power Analyses 174
Example 11.1: Reporting a Power Analysis for a Chi-Square Analysis 175
Example 11.2: Reporting a Power Analysis for Repeated Measures ANOVA 175
Reporting Power if Not Addressed A Priori 175
Statistical Test Assumptions 176
Effect Size Conversion Formulae 176
