About the Author	xv
Preface	xvii
Acknowledgments	xxi
Whom This Book Is Written For	xxiii
To the Instructor	xxv
List of Symbols	xxvii
About the Companion Website	xxxiii
1 Sources and Types of Soil and Groundwater Contamination	1
1.1 Uses of Surface Water vs. Groundwater	1
1.2 Groundwater Quantity vs. Groundwater Quality	4
1.3 Major Factors Affecting Groundwater Quality	6
1.4 Soil and Groundwater Contaminant Sources in the United States	8
1.4.1 Superfund Sites and Brownfields	9
1.4.2 RCRA Facilities and Underground Storage Tanks	12
1.4.3 DoD/DoE Sites	14
1.5 Contaminated Soil and Groundwater: A Global Perspective	14
1.6 Soil and Groundwater Remediation	16
1.6.1 Unique Challenges Relative to Air and Surface Water Pollution	16
1.6.2 Scope of Environmental Remediation	17
Bibliography	17
2 Subsurface Contaminant Fate and Transport	21
2.1 Frequent Soil and Groundwater Contaminants	22
2.1.1 Aliphatic and Aromatic Hydrocarbons	23
2.1.2 Halogenated Aliphatic Hydrocarbons	24
2.1.3 Halogenated Aromatic Hydrocarbons	25
2.1.4 Nitrogen-containing Organic Compounds	26
2.1.5 Oxygenated Organic Compounds	27
2.1.6 Sulfur- and Phosphorus-containing Organic Compounds	28
2.1.7 Inorganic Nonmetals, Metals, and Radionuclides	29
2.2 Abiotic and Biotic Chemical Fate Processes	30
2.2.1 Hydrolysis	31
2.2.2 Oxidation and Reduction	32
2.2.3 Biodegradation	35
2.3 Interphase Chemical Transport	35
2.3.1 Volatilization	36

2.3.2	Solubilization, Precipitation, and Dissolution	38
2.3.2.1	Solubility and Solubility Product for Inorganic Compounds	38
2.3.2.2	Solubility and K_{ow} for Organic Compounds	41
2.3.3	Sorption and Desorption	42
2.4	Intraphase Chemical Movement	48
2.4.1	Advection	49
2.4.2	Dispersion and Diffusion	49
	Bibliography	53
3	Soil and Groundwater Hydrology	59
3.1	Soil Composition and Properties	60
3.1.1	Constituents of Soils	60
3.1.2	Soil Physical and Chemical Properties	62
3.2	Basic Concepts of Aquifer and Wells	66
3.2.1	Vertical Distribution of Aquifer	66
3.2.2	Groundwater Well and Well Nomenclature	68
3.2.3	Hydrogeological Parameters	68
3.2.3.1	Specific Yield and Specific Retention	68
3.2.3.2	Hydraulic Conductivity and Permeability	70
3.2.3.3	Transmissivity and Storativity	71
3.3	Groundwater Movement	73
3.3.1	Flow in Saturated Zone	74
3.3.2	Flow in Unsaturated Zone	77
3.3.3	Flow to Wells in a Steady-State Confined Aquifer	80
3.3.4	Flow to Wells in a Steady-State Unconfined Aquifer	82
3.3.5	Flow of Nonaqueous Phase Liquid	84
	Bibliography	86
4	Legal, Economical, and Risk Assessment Considerations	91
4.1	Soil and Groundwater Protection Laws	92
4.1.1	Relevant Soil and Groundwater Laws in the United States	92
4.1.1.1	Safe Drinking Water Act	93
4.1.1.2	Resource Conservation and Recovery Act	94
4.1.1.3	Comprehensive Environmental Response, Compensation and Liability Act	95
4.1.1.4	Hazardous and Solid Waste Amendment	95
4.1.1.5	Superfund Amendment and Reauthorization Act	96
4.1.1.6	Small Business Liability Relief and Brownfields Revitalization Act	96
4.1.2	Framework of Environmental Laws in Other Countries	96
4.2	Cost Constraints in Remediation	97
4.2.1	Remediation Cost Elements	99
4.2.2	Basis for Remediation Cost Estimates	99
4.2.3	Cost Comparisons among Remediation Alternatives	101
4.3	Risk-based Remediation	104
4.3.1	How Clean Is Clean	104
4.3.2	Estimate Environmental Risk from Carcinogenic Compounds	108
4.3.3	Estimate Environmental Risk from Noncarcinogenic Compounds	112

4.3.4	Determine Risk-Based Cleanup Levels for Soil and Groundwater	113
4.3.4.1	Determining Maximum Concentration in Drinking Water and Air	114
4.3.4.2	Determining Allowable Soil Cleanup Level	115
4.3.4.3	Risk Involving Multimedia	116
	Bibliography	118
5	Site Characterization for Soil and Groundwater Remediation	123
5.1	General Consideration of Site Characterization	124
5.1.1	Objectives and Scopes of Site Characterization	124
5.1.2	Basic Steps: Phase I, II, and III Assessment	125
5.1.2.1	Phase I Environmental Site Assessment	125
5.1.2.2	Phase II Environmental Site Assessment	126
5.2	Soil and Geologic Characterization	130
5.2.1	Stratigraphy, Lithology, and Structural Geology	130
5.2.2	Direct Drilling Methods	130
5.2.3	Drive Method Using Cone Penetrometer	132
5.2.4	Indirect Geophysical Methods	132
5.3	Hydrogeologic Site Investigation	138
5.3.1	Well Installation, Development, and Purging	138
5.3.2	Hydraulic Head and Flow Direction	139
5.3.2.1	Methods to Measure Hydraulic Head	140
5.3.2.2	Groundwater Flow Direction	140
5.3.3	Aquifer Tests to Estimate Hydraulic Conductivity	141
5.3.3.1	Slug Test: Hvorslev Method	142
5.3.3.2	Slug Test: Bouwer and Rice Method	143
5.3.3.3	Pumping Test: Theis Type-Curve Method	143
5.4	Environmental Sampling and Analysis	146
5.4.1	Common Soil Samplers	146
5.4.2	Groundwater Sampling	148
5.4.2.1	Groundwater Sampling Tools	148
5.4.2.2	Cross-Contamination in Groundwater Sampling	149
5.4.3	Vadose Zone Soil Gas and Water Sampling	150
5.4.4	Instruments for Chemical Analysis	150
	Bibliography	152
6	Overview of Remediation Options	157
6.1	Types of Remediation Technologies	158
6.1.1	Classifications of Remediation Technologies	158
6.1.2	Common and Frequently Used Remediation Technologies	162
6.1.3	Technologies from Contaminant Perspectives	163
6.2	Development and Selection of Remediation Technologies	168
6.2.1	Remedial Investigation/Remedial Feasibility Study	172
6.2.2	Remediation Technologies Screening and Selection Criteria	174
6.2.3	Green and Sustainable Remediation	178
6.3	A Snapshot of Remediation Technologies	179
6.3.1	Description of Various Treatments	180
6.3.2	Treatment Train	180
	Bibliography	183

7	Pump-and-Treat Systems	187
7.1	General Applications of Conventional Pump-and-Treat	188
7.1.1	Contaminant Removal versus Hydraulic Containment	188
7.1.2	Schemes of Injection/Extraction Well Placement	191
7.2	Design of Pump-and-Treat Systems	192
7.2.1	Capture Zone Analysis of Pump-and-Treat Optimization	194
7.2.2	Aboveground Treatment of Contaminated Groundwater	198
7.2.2.1	General Treatment Technologies Available	198
7.2.2.2	Design Considerations for Air Stripping	200
7.2.2.3	Design Considerations for Activated Carbon	202
7.3	Pump-and-Treat Limitations and Alterations	204
7.3.1	Residual Saturations of Nonaqueous Phase Liquid	204
7.3.1.1	Dissolved Contaminant from NAPLs	204
7.3.1.2	Residual Saturation	205
7.3.2	Tailing and Rebound Problems	209
7.3.2.1	Slow NAPL Dissolution	209
7.3.2.2	Slow Contaminant Desorption/Precipitate Dissolution	210
7.3.2.3	Slow Matrix Diffusion	211
7.3.2.4	Groundwater Velocity Variation	211
7.3.3	Alterations of Conventional Pump-and-Treat	212
7.3.3.1	Chemical Enhancement to Increase Contaminant Mobility and Solubility	213
7.3.3.2	Horizontal Wells, Inclined Wells, Interceptor Trenches, and Drains	213
7.3.3.3	Phased Extraction Wells, Adaptive Pumping, and Pulsed Pumping	215
7.3.3.4	Induced Fractures	216
7.3.3.5	Pumping in Conjunction with Permeable and Impermeable Barriers	217
	Bibliography	219
8	Soil Vapor Extraction and Air Sparging	225
8.1	General Applications and Limitations of Vapor Extraction	226
8.1.1	Process Description and System Components	226
8.1.2	Chemical and Geologic Parameters Affecting Vapor Extraction	227
8.1.3	Pros and Cons of Vapor Extraction and Air Sparging	229
8.2	Soil Vapor Behavior and Gas Flow in Subsurface	231
8.2.1	Airflow Patterns in Subsurface	231
8.2.2	Vapor Equilibrium and Thermodynamics	233
8.2.3	Kinetics of Volatilization, Vapor Diffusion, and NAPL Dissolution	239
8.2.4	Darcy's Law for Advective Vapor Flow	241
8.3	Design for Vapor Extraction and Air Sparging Systems	245
8.3.1	Quantitative Analysis for the Appropriateness of Soil Venting	245
8.3.2	Well Number, Flow Rate, and Well Location	249
8.3.3	Other Design Considerations	251
	Bibliography	257

9	Bioremediation and Environmental Biotechnology	263
9.1	Principles of Bioremediation and Biotechnology	264
9.1.1	Microorganisms and Microbial Growth	265
9.1.1.1	Types of Microorganisms	265
9.1.1.2	Cell Growth on Contaminant	267
9.1.2	Reaction Stoichiometry and Kinetics	271
9.1.3	Biodegradation Potentials and Pathways	275
9.1.3.1	Biodegradation of Petroleum Aliphatic Hydrocarbons	276
9.1.3.2	Biodegradation of Single-Ring Petroleum Aromatic Hydrocarbon (BTEX)	276
9.1.3.3	Biodegradation of Fuel Additives (MTBE)	278
9.1.3.4	Biodegradation of Polycyclic Aromatic Hydrocarbons (PAHs)	278
9.1.3.5	Biodegradation of Chlorinated Aliphatic Hydrocarbons (CAHs)	279
9.1.3.6	Biodegradation of Chlorinated Aromatic Compounds	280
9.1.3.7	Biodegradation of Explosive Compounds	280
9.1.4	Optimal Conditions for Bioremediation	281
9.1.4.1	Hydrogeologic Parameters	282
9.1.4.2	Soil/Groundwater Physicochemical Parameters	283
9.1.4.3	Microbial Presence	285
9.1.4.4	Contaminant Characteristics	285
9.2	Process Description of Bioremediation and Biotechnologies	286
9.2.1	<i>In Situ</i> Bioremediation	287
9.2.2	<i>Ex Situ</i> Biological Treatment	290
9.2.2.1	Biopiles and Composting	290
9.2.2.2	Landfarming	292
9.2.2.3	Bioslurry Reactors	293
9.2.3	Sanitary Landfills	293
9.2.4	Phytoremediation and Constructed Wetland	294
9.3	Design Considerations and Cost-Effectiveness	300
9.3.1	General Design Rationales	300
9.3.1.1	Design for <i>In Situ</i> Groundwater Bioremediation	300
9.3.1.2	Design for Bioventing	301
9.3.1.3	Design for Biosparging	301
9.3.1.4	Design for Biopiles and Composting	301
9.3.1.5	Design of Landfill	302
9.3.2	Cost Effectiveness Case Studies	302
	Bibliography	305
10	Thermal Remediation Technologies	315
10.1	Thermal Destruction by Incineration	316
10.1.1	Principles of Combustion and Incineration	316
10.1.1.1	Combustion Chemistry and Combustion Efficiency	316
10.1.1.2	Heating Values of Fuels/Wastes	319
10.1.1.3	Oxygen (Air) Requirement	320
10.1.1.4	Three T's of the Combustion/Incineration	323

10.1.2	Components of Hazardous Waste Incinerator Systems	324
10.1.2.1	General Applications: Pros and Cons	324
10.1.2.2	Incinerator System Components	325
10.1.2.3	Four Types of Combustion Chambers	326
10.1.3	Design Considerations for Incineration	328
10.1.3.1	Incinerator Size and Dimensions	329
10.1.3.2	Factors Affecting Incinerator Performance	331
10.1.4	Regulatory and Siting Considerations	332
10.2	Thermally Enhanced Technologies	332
10.2.1	Temperature Effects on Physicochemical and Biological Properties	333
10.2.2	Heat Transfer Mechanisms in Soil and Groundwater	338
10.2.3	Required Heat-Up Time and Radius of Influence	338
10.2.4	Use of Hot Air, Steam, Hot Water, and Electro-Heating	339
10.2.4.1	Hot Air, Steam, Hot Water, and Electro-Heating	339
10.2.4.2	Flow Chart to Select Thermal Processes	343
10.3	Vitrification	344
	Bibliography	347
11	Soil Washing and Flushing	353
11.1	Basic Principles of Soil Washing and Flushing	354
11.1.1	Overview of Soil Washing and Flushing	354
11.1.2	Surfactant-Enhanced Contaminant Solubilization	356
11.1.3	Surfactant-Enhanced Contaminant Mobilization	358
11.1.4	Cosolvent Effects on Solubility and Mobilization	361
11.2	Process Description, Technology Applicability, and Limitations	363
11.2.1	<i>Ex Situ</i> Soil Washing	364
11.2.2	<i>In Situ</i> Soil Flushing and Cosolvent Flooding	368
11.3	Design and Cost-Effectiveness Considerations	370
11.3.1	Chemical Additives in Soil Washing and Flushing	370
11.3.2	Recycle of Chemical Additives and Disposal of Flushing Wastes	373
	Bibliography	375
12	Permeable Reactive Barriers	379
12.1	Reaction Mechanisms and Hydraulics in Reactive Barriers	380
12.1.1	Barrier Technologies as a Viable Option for Pump-and-Treat	380
12.1.2	Dechlorination Mediated through Redox Reactions by Zero-Valent Iron	381
12.1.3	Other Abiotic and Biotic Processes in Reactive Barriers	384
12.1.4	Hydraulics and Fouling Problems in Reactive Barriers	386
12.2	Process Description of Reactive Barriers	388
12.2.1	Configurations of Reactive Barriers	388
12.2.2	Available Reactive Media and Selection	389
12.2.2.1	Types of Reactive Media	389
12.2.2.2	Reactive Media Selection	391
12.3	Design and Construction Considerations	392
12.3.1	Barrier Design Concept	392
12.3.2	Construction Methods	394
	Bibliography	400

13 Modeling of Groundwater Flow and Contaminant Transport	403
13.1 Governing Equations for Groundwater Flow	404
13.1.1 Saturated Groundwater Flow under Steady-State Condition (Laplace Equation)	404
13.1.2 Saturated Groundwater Flow under Transient Condition	406
13.1.3 Unsaturated Groundwater Flow under Transient Condition (Richards Equation)	407
13.2 Governing Equations for Contaminant Transport	408
13.2.1 General Mass Balance Equations Considering Advection and Dispersion	408
13.2.2 Governing Equations for Contaminant Transport in Unsaturated Zone	411
13.2.3 Governing Equations Incorporating Adsorption and Reaction	412
13.2.4 General Concepts and Equations Describing Multiphase Flow and Transport	415
13.2.4.1 Processes Relevant to Multiphase and Multiple Components	415
13.2.4.2 Framework of Governing Equations for Multiphase Flow and Transport	417
13.3 Analytical Solutions to Flow and Transport Processes	420
13.3.1 Darcy's Law: 1-D Flow in Unconfined Aquifer (Dupuit Equation)	420
13.3.2 Fick's Second Law: 1-D Diffusion Only Solutions	422
13.3.3 Advection and Dispersion: 1-D, 2-D, and 3-D Solutions to Slug Injection	424
13.3.4 Advection and Dispersion: 1-D Solutions to Continuous Injection	425
13.3.5 Advection and Dispersion: 2-D and 3-D Solutions to Continuous Injection	427
13.4 Numerical Solutions to Flow and Transport Processes	430
13.4.1 Partial Differential Equations and Numerical Methods	430
13.4.2 2-D Laplace Equation Using Finite Difference Method	433
Bibliography	436
Appendix A Common Abbreviations and Acronyms	439
Appendix B Definition of Soil and Groundwater Remediation Technologies	445
Appendix C Structures and Properties of Important Organic Pollutants in Soil and Groundwater	451
Appendix D Unit Conversion Factors	459
Appendix E Answers to Selected Problems	461
Index	465
IUPAC Periodic Table of the Elements	477
