Contents

Preface, xiii

Acknowledgements, xv

1 BACKGROUND AND BASIC CHEMICAL PRINCIPLES: ELEMENTS, IONS, BONDING, REACTIONS, 1

- 1.1 An Overview Of Environmental Geochemistry – History, Scope, Questions, Approaches, Challenges for the Future, 1
- 1.2 The Naturally Occurring Elements – Origins and Abundances, 3
 - 1.2.1 Origin of the light elements H and He (and Li), 3
 - 1.2.2 Formation of heavier elements, 4
 - 1.2.3 Formation of planets and compositional differentiation, 5
- 1.3 Atoms, Isotopes, and Valence Electrons, 6
 - 1.3.1 Atoms: protons, neutrons, electrons, isotopes, 6
 - 1.3.2 Electrons and bonding, 7
- 1.4 Measuring Concentrations, 8
 - 1.4.1 Mass-based concentrations, 8
 - 1.4.2 Molar concentrations, 9
 - 1.4.3 Concentrations of gases, 10
 - 1.4.4 Notes on precision and accuracy, significant figures, and scientific notation, 10
- 1.5 Periodic Table, 12
 - 1.5.1 Predicting behavior of elements using the periodic table, 12
 - 1.5.2 The earth scientist's periodic table, 12
- 1.6 Ions, Molecules, Valence, Bonding, Chemical Reactions, 13
 - 1.6.1 Ionic bonding, 13
 - 1.6.2 Determining ionic bond strength, 14
 - 1.6.3 Covalent bonding, 15
 - 1.6.4 Electronegativity and predicting bond type, 16
 - 1.6.5 Metallic bonds, hydrogen bonds, and van der Waals forces, 17
- 1.7 Acid–Base Equilibria, PH, K Values, 18
 - 1.7.1 Definitions of acids and bases, 18
 - 1.7.2 The law of mass action and quantifying acid dissociation, 20
- 1.8 Fundamentals of Redox Chemistry, 20
 - 1.8.1 Defining oxidation and reduction, 21
 - 1.8.2 Redox reactions, 21
- 1.9 Chemical Reactions, 22
- 1.10 Equilibrium, Thermodynamics, and Driving Forces for Reactions: Systems, Gibbs Energies, Enthalpy and Heat Capacity, Entropy, Volume, 23
 - 1.10.1 Pyrite oxidation as an introductory example, 23
 - 1.10.2 Systems, species, phases, and components, 24
 - 1.10.3 First law of thermodynamics, 25
 - 1.10.4 Second law of thermodynamics, 26
 - 1.10.5 Enthalpy, 27
 - 1.10.6 Heat capacity, 28
 - 1.10.7 Gibbs free energy and predicting stability, 29
 - 1.10.8 The Van't Hoff equation: relating gibbs free energy to the equilibrium constant (K_{eq}), 30
- 1.11 Kinetics and Reaction Rates, 31
 - 1.11.1 Factors controlling reaction rate, 32
 - 1.11.2 Reaction rate, reaction order, 33
 - 1.11.2.1 Zero-order reactions, 33
 - 1.11.2.2 First-order reactions, 33
 - 1.11.2.3 Second-order reactions, 34
 - 1.11.3 Temperature and the Arrhenius equation, 35

Questions, 35
References, 36

2 SURFICIAL AND ENVIRONMENTAL MINERALOGY, 39

- 2.1 Introduction to Minerals and Unit Cells, 39
- 2.2 Ion Coordination, Pauling's Rules, and Ionic Substitution, 41
 - 2.2.1 Coordination and radius ratio, 41
 - 2.2.2 Bond strength considerations, 42
 - 2.2.3 Pauling and goldschmidt rules of ionic solids, 45
 - 2.2.3.1 Rule 1: the coordination principle, 45
 - 2.2.3.2 Rule 2: the principle of local charge balance, 45
 - 2.2.3.3 Rule 3: sharing of polyhedral edges and faces, 45
 - 2.2.3.4 Rule 4: valency and sharing of polyhedral components, 46
 - 2.2.3.5 Rule 5: the principle of parsimony, 46
- 2.3 Silicates, 46
 - 2.3.1 Nesosilicates, 47
 - 2.3.2 Inosilicates, 48
 - 2.3.3 Phyllosilicates, 49
 - 2.3.3.1 The 2 : 1 phyllosilicates, 51
 - 2.3.3.2 The 1 : 1 phyllosilicates, 53
 - 2.3.4 Tectosilicates, 54
- 2.4 Clay Minerals (1 : 1 and 2 : 1 Minerals, Interstratified Clays), 55
 - 2.4.1 Smectite, 55
 - 2.4.1.1 Smectites with tetrahedrally derived layer charge, 56
 - 2.4.1.2 Smectites with octahedrally derived layer charge, 57
 - 2.4.2 Vermiculite, 57
 - 2.4.3 Illite, 58
 - 2.4.4 Chlorite and berthierine, 58
 - 2.4.5 Kaolin group (kaolinite and halloysite), 59
 - 2.4.6 Interstratified clay minerals, 59
 - 2.4.7 Trace metals and metalloids in clay minerals, 60

- 2.5 Crystal Chemistry of Adsorption and Cation Exchange, 60
 - 2.5.1 Cation exchange, 61
 - 2.5.1.1 Mechanisms by which cations are attracted to surfaces, 61
 - 2.5.1.2 Particle attributes that influence ion exchange, 61
 - 2.5.1.3 Point of zero charge and isoelectric point, 62
 - 2.5.1.4 Double-layer complexes, 63
 - 2.5.1.5 Units of concentration and measurement of CEC, 63
 - 2.6 Low-Temperature Non-Silicate Minerals: Carbonates, Oxides and Hydroxides, Sulfides, Sulfates, Salts, 64
 - 2.6.1 Carbonates, 64
 - 2.6.2 Oxides and hydroxides, 66
 - 2.6.3 Sulfides and sulfates, 66
 - 2.6.3.1 Halide and nitrate salts, 68
 - 2.7 Mineral Growth and Dissolution, 68
 - 2.8 Biomineralization, 72
- Questions, 72
References, 73

3 ORGANIC COMPOUNDS IN THE ENVIRONMENT, 75

- 3.1 Introduction to Organic Chemistry: Chains and Rings, Single, Double, and Triple Bonds, Functional Groups, Classes of Organic Compounds, Organic Nomenclature, 75
 - 3.1.1 Definition of organic compounds, 75
 - 3.1.2 Hybridization of carbon atoms in organic compounds, 76
 - 3.1.3 Alkanes, 76
 - 3.1.4 Alkenes, 78
 - 3.1.5 Functional groups, 79
 - 3.1.6 Aromatic hydrocarbons and related compounds, 80
 - 3.1.7 Nitrogen, phosphorus, and sulfur in organic compounds, 83
 - 3.1.8 Pharmaceutical compounds, 85
 - 3.1.9 Emerging contaminants – PFCs, 86

- 3.2 Natural Organic Compounds at the Earth Surface, 87
 - 3.2.1 Humic and fulvic material, 87
 - 3.2.2 Origins and compositions of fossil fuels, 87
 - 3.3 Fate and Transport of Organic Pollutants, Controls on Bioavailability, Behavior of DNAPLS and LNAPLS, Biodegradation, Remediation, 88
 - 3.3.1 Solid–liquid–gas phase considerations, 89
 - 3.3.2 Solubility considerations, 89
 - 3.3.3 Interactions of organic compounds and organisms, 89
 - 3.3.4 Adsorption of organic compounds, 91
 - 3.3.4.1 Adsorbates, 92
 - 3.3.4.2 Adsorbents, 92
 - 3.3.5 Non-aqueous phase liquids (NAPLs) in the environment, 94
 - 3.3.6 Biodegradation, 94
 - 3.3.7 Remediation, 96
 - 3.4 Summary, 96
 - Questions, 96
 - References, 97
- 4 AQUEOUS SYSTEMS AND WATER CHEMISTRY, 99**
- 4.1 Introduction to the Geochemistry of Natural Waters, 99
 - 4.1.1 Geochemistry and the hydrologic cycle, 99
 - 4.1.1.1 Evaporation and precipitation, 99
 - 4.1.1.2 Infiltration, soils, chemical weathering, 99
 - 4.1.1.3 Surface water and groundwater, 101
 - 4.1.1.4 Graphical analysis of climate and surface water composition, 102
 - 4.2 The Structure of Water – Implications of Geometry and Polarity, 103
 - 4.3 Dissolved versus Particulate, Solutions, and Suspensions, 104
 - 4.3.1 Dissolved constituents and the nature of solutions, 104
 - 4.3.2 Particulate (suspended) fraction, 105
 - 4.3.3 Immiscible liquids, 105
 - 4.3.4 Dissolved vs. particulate vs. colloidal, 105
 - 4.4 Speciation: Simple Ions, Polyatomic Ions, and Aqueous Complexes, 106
 - 4.5 Controls on the Solubility of Inorganic Elements and Ions, 106
 - 4.5.1 Role of temperature, 107
 - 4.5.2 Residence time, 107
 - 4.5.3 The ratio of ionic charge : ionic radius and its effect on solubility, 108
 - 4.5.4 Reduction–oxidation reactions, 108
 - 4.5.4.1 Half-cell reactions, 110
 - 4.5.4.2 Redox reactions in the environment, 111
 - 4.5.5 Acid–base considerations and pH, 111
 - 4.5.6 Ligands and elemental mobility, 113
 - 4.6 Ion Activities, Ionic Strength, TDS, 113
 - 4.6.1 Ion activity coefficients, 113
 - 4.6.2 Ion activity product, 114
 - 4.6.3 Ionic strength, 114
 - 4.6.4 Total dissolved solids, 115
 - 4.7 Solubility Products, Saturation, 115
 - 4.8 Coprecipitation, 116
 - 4.9 Behavior of Selected Elements in Aqueous Systems, 117
 - 4.9.1 Examples of heavy metals and metalloids, 117
 - 4.9.1.1 Heavy metals, 117
 - 4.9.1.2 Metalloids, 118
 - 4.10 Eh–pH Diagrams, 119
 - 4.10.1 Principles of Eh–pH, 119
 - 4.10.2 Eh–pH diagrams for Cu, Pb, As, U, Fe, Al, 121
 - 4.11 Silicon in Solution, 123
 - 4.12 Effect of Adsorption and Ion Exchange on Water Chemistry, 123
 - 4.12.1 Ionic potential, hydration radius, and adsorption, 124
 - 4.12.2 Law of mass action and adsorption, 124
 - 4.12.3 Adsorption edges, 125
 - 4.12.4 Adsorption isotherms, 127
 - 4.13 Other Graphical Representations of Aqueous Systems: Piper and Stiff Diagrams, 128
 - 4.14 Summary, 131
 - Questions, 131
 - References, 131

5 CARBONATE GEOCHEMISTRY AND THE CARBON CYCLE, 133

- 5.1 Inorganic Carbon in the Atmosphere and Hydrosphere, 133
 - 5.1.1 Atmospheric CO₂, carbonate species, and the pH of rain, 133
 - 5.1.2 Speciation in the carbonate system as a function of pH, 135
 - 5.1.3 Alkalinity, 135
 - 5.1.4 Carbonate solubility and saturation, 138
 - 5.1.5 The effect of CO₂ partial pressure on stability of carbonate minerals, 139
 - 5.1.6 The effect of mineral composition on stability of carbonate minerals, 140
- 5.2 The Carbon Cycle, 141
 - 5.2.1 Oxidation states of carbon, 141
 - 5.2.2 Global-scale reservoirs and fluxes of carbon, 142
 - 5.2.3 Processes that transfer carbon into the crust, 142
 - 5.2.3.1 Carbonate rocks, 143
 - 5.2.3.2 Fixation of organic carbon into organisms, 144
 - 5.2.3.3 Formation of hydrocarbons, 144
 - 5.2.3.4 Formation of coal, 145
 - 5.2.4 Rates of organic carbon flux to and from the crust, 145
 - 5.2.5 The ocean reservoir, 147
 - 5.2.5.1 Fixation of C into oceans, 147
 - 5.2.5.2 Ocean acidification, 147
 - 5.2.5.3 Long-term viability of oceans as C sink, 149
 - 5.2.5.4 Methane hydrates, 149
 - 5.2.6 Carbon in cold region soils, 150
 - 5.2.7 The atmospheric reservoir, 151
 - 5.2.7.1 Changes to atmospheric carbon over geological time, 151
 - 5.2.7.2 Feedback loops, 152
 - 5.2.7.3 Anthropogenic C and the atmosphere, 153
 - 5.2.8 Carbon sequestration, 154

Questions, 154

References, 155

6 BIOGEOCHEMICAL SYSTEMS AND CYCLES (N, P, S), 157

- 6.1 Systems and Elemental Cycles, 157
 - 6.1.1 Reservoirs, fluxes, and systems, 157
 - 6.1.2 The concept of steady state vs. dynamic equilibrium, 158
- 6.2 Elemental Cycles, 159
 - 6.2.1 The nitrogen cycle, 159
 - 6.2.1.1 Nitrogen oxidation states, nitrogen species, 160
 - 6.2.1.2 Processes operating within the nitrogen cycle, 161
 - 6.2.1.3 Global-scale reservoirs and fluxes of nitrogen, 163
 - 6.2.1.4 Human perturbation of the nitrogen cycle and resulting environmental impacts, 164
 - 6.2.2 The phosphorus cycle, 168
 - 6.2.2.1 P cycling in soils, 168
 - 6.2.2.2 The global phosphorus cycle, 170
 - 6.2.2.3 Phosphorus and eutrophication, 171
 - 6.2.3 Comparison of N and P, 171
 - 6.2.4 The sulfur cycle, 172
 - 6.2.4.1 Sulfur oxidation states, sulfur species, 172
 - 6.2.4.2 The global S cycle, 173
 - 6.2.4.3 The marine S cycle, 173
 - 6.2.4.4 Sulfur, soils, and biota, 175
 - 6.2.4.5 Sulfur and the atmosphere, 176
 - 6.2.4.6 Sulfur and river flux, 176
 - 6.2.5 Integrating the C, N, P, and S cycles, 177

Questions, 178

References, 178

7 THE GLOBAL ATMOSPHERE: COMPOSITION, EVOLUTION, AND ANTHROPOGENIC CHANGE, 181

- 7.1 Atmospheric Structure, Circulation, and Composition, 181

- 7.1.1 Structure and layering of the atmosphere, 181
- 7.1.2 Geological record of atmospheric composition, 182
- 7.1.3 Climate proxies, 184
- 7.1.4 Orbital control on C, 184
- 7.1.5 Composition of the current atmosphere, 186
- 7.1.6 Air circulation, 188
- 7.2 Evaporation, Distillation, CO₂ Dissolution, and the Composition of Natural Precipitation, 190
- 7.3 The Electromagnetic Spectrum, Greenhouse Gases, and Climate, 191
 - 7.3.1 Electromagnetic spectrum, 191
 - 7.3.2 Reradiation from earth's surface, 192
 - 7.3.3 Greenhouse effect and heat trapping, 194
- 7.4 Greenhouse Gases: Structures, Sources, Sinks, and Effects on Climate, 194
 - 7.4.1 Molecular structures and vibrations of greenhouse gases, 195
 - 7.4.2 Greenhouse gases, radiative forcing, GWPs, 196
 - 7.4.3 Global warming, 197
- Questions, 198
- References, 199

8 AIR QUALITY: URBAN AND REGIONAL POLLUTANTS, 201

- 8.1 Air Pollution: Definitions and Scope, 201
- 8.2 Oxygen and its Impact on Atmospheric Chemistry, 202
- 8.3 Free Radicals, 202
- 8.4 Sulfur Dioxide, 204
- 8.5 Nitrogen Oxides, 206
- 8.6 Carbon Monoxide, 209
- 8.7 Particulate Matter, 209
- 8.8 Lead (Pb), 210
- 8.9 Hydrocarbons and Air Quality: Tropospheric Ozone and Photochemical Smog, 211
- 8.10 Stratospheric Ozone Chemistry, 213
- 8.11 Sulfur and Nitrogen and Acid Deposition, 215
- 8.12 Organochlorine Pesticides, Mercury, and Other Trace Constituents in the Atmosphere, 219
 - 8.12.1 Pesticides in air, 219

- 8.12.2 Mercury in air, 220
- 8.12.3 As, Cd, and Ni, 221
- Questions, 222
- References, 222

9 CHEMICAL WEATHERING, SOILS, AND HYDROLOGY, 225

- 9.1 Chemical Weathering of Primary Minerals in Soils, 225
 - 9.1.1 Thermodynamic vs. kinetic considerations, 225
 - 9.1.2 Predicting weathering rates: Goldich stability sequence, 226
 - 9.1.3 Laboratory determinations of primary mineral weathering rates, 227
 - 9.1.4 Chemical weathering reactions, 227
 - 9.1.4.1 Hydrolysis, 228
 - 9.1.4.2 Dissolution of ionic solids, 228
 - 9.1.4.3 Reduction–oxidation, 229
 - 9.1.4.4 Hydration, 230
- 9.2 Products and Consequences of Chemical Weathering, 231
 - 9.2.1 Congruous vs. incongruous weathering: dissolved vs. solid products, 231
 - 9.2.2 Geochemical quantification of elemental mobility in soil, 231
 - 9.2.3 Quantifying chemical weathering: CIA, 232
 - 9.2.4 Secondary minerals: controls on formation, mineral stability diagrams, 233
 - 9.2.4.1 Factors controlling soil mineralogy, 233
 - 9.2.4.2 Mineral stability diagrams, 234
- 9.3 Soil Profiles, Nomenclature, Soil-Forming Factors, 239
 - 9.3.1 The concept of the soil profile, 239
 - 9.3.2 Soil-forming factors, 239
 - 9.3.2.1 Climate, 239
 - 9.3.2.2 Organisms, 240
 - 9.3.2.3 Relief (topography), 241
 - 9.3.2.4 Parent material, 241
 - 9.3.2.5 Time, 242
 - 9.3.2.6 Anthropogenic factors, 243

- 9.3.3 Soil classification – soil orders and geochemical controls, 243
 - 9.4 Soils and the Geochemistry of Paleoclimate Analysis, 243
 - 9.5 Effects of Acid Deposition on Soils and Aquatic Ecosystems, 245
 - 9.5.1 Increased solubility of Al in acidic soil solution, 245
 - 9.5.2 Displacement of adsorbed nutrient cations, 246
 - 9.5.3 Leaching of base cations enhanced by increased NO_3 and SO_4 , 247
 - 9.5.4 Decrease of soil buffering capacity and base saturation, 247
 - 9.5.5 Acid deposition and heavy metals, 248
 - 9.6 Soils and Plant Nutrients, 248
 - 9.7 Saline and Sodic Soils, 249
 - 9.8 Toxic Metals and Metalloids, 251
 - 9.9 Organic Soil Pollutants and Remediation (Fuels, Insecticides, Solvents), 254
 - Questions, 256
 - References, 256
- 10 STABLE ISOTOPE GEOCHEMISTRY, 259**
- 10.1 Stable Isotopes – Mass Differences and the Concept of Fractionation, 259
 - 10.2 Delta (δ) Notation, 261
 - 10.3 Fractionation: Vibrational Frequencies, Mass, and Temperature Dependence, 263
 - 10.3.1 Stable isotopes and chemical bond strength, 263
 - 10.3.2 Temperature-dependent stable isotope fractionation, 263
 - 10.3.3 Equilibrium and non-equilibrium isotope fractionation, 265
 - 10.3.3.1 Equilibrium isotope fractionation, 266
 - 10.3.3.2 Non-equilibrium isotope fractionation, 266
 - 10.4 $\delta^{18}\text{O}$ and δD , 267
 - 10.4.1 Rayleigh distillation in the hydrologic cycle, 268
 - 10.4.2 The meteoric water line, 268
 - 10.4.3 Regional-scale to global-scale variations in precipitation, 270
 - 10.4.4 Temperature dependence of $\delta^{18}\text{O}$ in precipitation, 271
 - 10.4.5 Paleotemperature analysis using oxygen and hydrogen isotopes, 272
 - 10.4.6 Oxygen and hydrogen isotopes as tracers in soils and groundwater, 272
 - 10.4.7 Application of oxygen and hydrogen isotopes to paleosol climate records, 273
 - 10.5 $\delta^{15}\text{N}$, 273
 - 10.6 $\delta^{13}\text{C}$, 275
 - 10.6.1 Carbon isotope analysis of paleoenvironment, 276
 - 10.6.2 Carbon isotopes in hydrology and chemical weathering, 277
 - 10.7 $\delta^{34}\text{S}$, 278
 - 10.7.1 Fractionation of sulfur isotopes, 278
 - 10.7.2 Sulfur isotopes as tracers of acid deposition, sulfate reduction, and seawater composition over geologic time, 280
 - 10.8 Nontraditional Stable Isotopes, 280
 - 10.8.1 $\delta^{65/63}\text{Cu}$, 281
 - 10.8.2 $\delta^{56/54}\text{Fe}$, 281
 - 10.8.3 $\delta^{202/198}\text{Hg}$, 282
 - 10.8.4 $\delta^{26}\text{Mg}$ and $\delta^{44/42}\text{Ca}$, 284
 - 10.8.5 $\delta^{37/35}\text{Cl}$, 284
 - 10.9 Summary, 285
 - Questions, 285
 - References, 286
- 11 RADIOACTIVE AND RADIOGENIC ISOTOPE GEOCHEMISTRY, 289**
- 11.1 Radioactive Decay, 289
 - 11.1.1 Mechanisms and products of radioactive decay, 289
 - 11.1.2 Half-lives, decay rates, and decay constants, 290
 - 11.1.3 Uranium and thorium decay series, 293
 - 11.2 Radionuclide Tracers in Environmental Geochemistry, 294
 - 11.2.1 $^{206}\text{Pb}/^{207}\text{Pb}$, 294
 - 11.2.2 $^{87}\text{Sr}/^{86}\text{Sr}$, 294
 - 11.3 Radionuclides as Environmental Contaminants, 295
 - 11.3.1 Controls on U, Th, and their decay products, 295
 - 11.3.2 Uranium ores, refining, and nuclear wastes, 298
 - 11.3.3 High-level radioactive wastes: geological disposal and considerations, 300

- 11.4 Geochronology, 301
 - 11.4.1 ^{14}C , cosmogenic radionuclides, and earth-surface dating techniques, 302
 - 11.4.1.1 ^{14}C (radiocarbon), 302
 - 11.4.1.2 Cosmogenic ^{10}Be , ^{26}Al , and ^{36}Cl , 304
 - 11.4.1.3 Dating groundwater with ^{14}C and ^{36}Cl , 306
 - 11.4.1.4 Exposure age analysis, 307
- 11.5 Radioactive Decay Methods of Dating Sediments and Minerals, 309
 - 11.5.1 ^{210}Pb , 309
 - 11.5.2 K–Ar, 310
 - 11.5.3 Ar–Ar analysis, 311
 - 11.5.4 Rb–Sr, 311
 - 11.5.5 U–Th–Pb, 311
 - 11.5.6 $^{234}\text{U}/^{238}\text{U}$ and ^{234}U disequilibrium, 313

Questions, 315

References, 315

APPENDIX I CASE STUDY ON THE RELATIONSHIPS AMONG VOLATILE ORGANIC COMPOUNDS (VOCs), MICROBIAL ACTIVITY, REDOX REACTIONS, REMEDIATION, AND ARSENIC MOBILITY IN GROUNDWATER, 319

- I.1 Site Information, Contaminant Delineation, 319
 - I.2 Remediation Efforts, 320
 - I.3 Sources of PCE and ARSENIC, 320
 - I.4 Mobilization of Arsenic, 322
- References, 323

APPENDIX II CASE STUDY OF PFOA MIGRATION IN A FRACTURED ROCK AQUIFER: USING GEOCHEMISTRY TO DECIPHER CAUSES OF HETEROGENEITY, 325

- II.1 Geologic Framework, 326

- II.2 Inorganic Chemistry of Groundwater, 326
 - II.3 Stable Isotope Compositions of Groundwater, 327
 - II.4 Groundwater Age-Dating, 328
 - II.5 Conceptual Model for the Groundwater System, 328
- References, 329

APPENDIX III INSTRUMENTAL ANALYSIS, 331

- III.1 Analysis of Minerals and Crystal Chemistry, 331
 - III.1.1 Electron microscopy (SEM, TEM, and many other acronyms), 331
 - III.1.2 XRD, 332
 - III.1.2.1 Bragg's Law, 333
 - III.1.2.2 Mineral Identification by XRD, 334
 - III.1.3 FTIR, 334
 - III.1.4 X-ray absorption spectroscopy (XAS) techniques (EXAFS, XANES), 335
 - III.2 Chemical Analysis of Rocks and Sediments: XRF, 337
 - III.3 Elements or Compounds in Solution, 338
 - III.3.1 Elements in solution by ICP-AES, ICP-MS, AAS, 338
 - III.3.2 Chromatography, 339
 - III.4 Isotopic Analysis: Mass Spectrometry, 339
- References, 340

APPENDIX IV TABLE OF THERMODYNAMIC DATA OF SELECTED SPECIES AT 1 ATM AND 25 °C, 341

References, 344

Index, 345
