
**Camera Monitoring at volcanoes: Identification and
characterization of lava fountain activity and near-vent
processes and their relevance for early warning systems**

Tanja Ivonne Witt
13. November 2018

Cumulative dissertation
to obtain the academic degree
"doctor rerum naturalium" (Dr. rer. nat.)
in the scientific discipline Geophysics

Submitted to the
Faculty of Mathematics and Natural Sciences
at the University of Potsdam, Germany

Contents

Abstract	iv
Zusammenfassung	v
1 Introduction	1
1.1 Motivation	1
1.2 Video monitoring	4
1.3 Lava fountains, fissures and vents	4
1.4 Main questions and outline	6
1.5 Author's contributions and publications	7
2 Video monitoring reveals pulsating vents and propagation path of fissure eruption during the March 2011 Pu'u'Ō'ō eruption, Kilauea volcano	9
2.1 Introduction	10
2.2 Lava fountains and the March 2011 Pu'u'Ō'ō eruption	11
2.2.1 Hawaiian lava fountains and venting activity	11
2.2.2 The March 2011 Pu'u'Ō'ō eruption	12
2.3 Video recording and image analysis methods	14
2.3.1 Camera set-up	14
2.3.2 Video analysis	15
2.3.3 Statistical tests	17
2.3.4 Scaling	17
2.4 Results	18
2.4.1 Height of the pulsating eruptions	18
2.4.2 Frequency, correlation and velocity	19
2.4.2.1 Frequencies	19
2.4.2.2 Correlation	20
2.4.2.3 Velocity	22
2.5 Discussion	24
2.5.1 Limitations	24
2.5.2 Implications for pressure wave velocity and dyke width	26
2.6 Conclusions	28
3 High-Resolution Digital Elevation Modeling from TLS and UAV Campaign Reveals Structural Complexity at the 2014/2015 Holuhraun Eruption Site, Iceland	30
3.1 Introduction	32
3.2 Data and Methods	34
3.2.1 Satellite Data	34
3.2.2 Close Range Aerial Photographs from UAV	35
3.2.3 Laser Scanning	36
3.2.4 Point Cloud Density and Referencing	36
3.2.5 Data Limitations	37
3.3 Results	39
3.3.1 Topographic Expression	39

3.3.2	Fractures and Their Azimuths	40
3.3.3	Horizontal Fracture Offsets and Strike-Slip Component	41
3.4	Discussion	43
3.4.1	Limitations	43
3.4.2	Graben Expression and Vertical Throw	44
3.4.3	Fracture Azimuth and Mode Changes	46
3.4.4	Reactivation	48
3.5	Conclusions	48
4	Multiple coincident eruptive seismic tremor sources during the 2014 - 2015 eruption at Holuhraun, Iceland	50
4.1	Introduction	52
4.2	Overview of the Eruption	53
4.2.1	General Overview of the Fissures	53
4.2.2	Vent Activity	53
4.2.3	Growth of the Lava Flow Field	54
4.3	Methods	56
4.3.1	Frequency-Wave Number Analysis With Array Data	56
4.3.2	Effusion Rate Derivation From Space-Based Thermal Data	56
4.3.3	Lava Fountain Height Estimation From Video Records	57
4.4	Results	57
4.5	Correlation of the Vent Activity and Tremor Regime 1	58
4.5.1	Correlation of the Lava Flow Field Growth and Tremor Regime 2	61
4.5.2	Regime 3: Back Azimuth Changes Up To 25° in 4 Days	63
4.5.3	Correlation of Effusion Rate and Tremor Amplitude	63
4.6	Discussion	64
4.6.1	Regime 1: Vent Tremor Model	64
4.6.2	Regime 2: Lava Flow Field Tremor Model	66
4.6.3	Regime 3: Dyke Intrusions	67
4.6.4	Possible Applications of the Tremor Amplitude	68
4.7	Conclusions	68
5	The relationship between lava fountaining and vent morphology for the 2014 – 2015 Holuhraun eruption, Iceland, analyzed by video monitoring and topographic mapping	70
5.1	Introduction	72
5.1.1	Fissure morphology, different vent types and their controls	73
5.1.2	Focused venting	74
5.2	Study area	75
5.3	Data collection and methods	78
5.3.1	Collected data	78
5.3.2	Analytic methods	80
5.3.2.1	Morphology generation and difference	80
5.3.2.2	Fountain dynamics by video analysis	82
5.4	Results	82
5.4.1	General overview	82
5.4.2	Morphology of the cones	84
5.4.3	Comparison of the cone morphology at Suðri and Baugur	88
5.4.4	Fountaining behavior - Height	89
5.4.5	Height-to-Width Ratio	90

5.4.6	Comparison of the fountain dynamics between both cones	90
5.4.7	Comparison of the morphology and the fountain dynamics	91
5.5	Discussion	92
5.5.1	Limitation	92
5.5.2	Model of lava fountains	94
5.5.3	Implications of the study	96
5.6	Conclusion	98
6	Supplementary Material for chapter 5	100
6.1	Equations for modelling the lava fountain heights	100
6.2	Supplementary Tables and Figures	101
6.2.1	Table of modelling parameters	101
6.2.2	Figures	102
7	Summary and Discussion	103
7.1	Implications and Outlook	105
7.1.1	Video monitoring and the used methods	105
7.1.2	Dynamics of lava fountains	106
7.1.3	Dyke propagation and link to erupting vents	107
7.1.4	Interactions between fountain dynamics and morphology	107
7.1.5	Further outlook	108
8	Supplementary information	110
8.1	MATLAB-Code	110
8.1.1	Main Code of the lava fountain analysis	110
8.1.2	Code for Correlation, smoothing and velocity	116
8.1.3	Fountain height calculation	121
	Bibliography	123
