Differential Invariants of Prehomogeneous Vector Spaces

Logos Verlag Berlin

Contents

Introduction	iii
1 Prehomogeneous vector spaces	1
1.1 Prehomogeneous vector spaces and relative invariants . . .	1
1.2 The contragredient representation	4
1.3 Reductive prehomogeneous vector spaces and the Bernstein-Sato polynomial	6
1.4 The differential of the orbit map	9
2 The spectrum and the Birkhoff problem	13
2.1 The spectrum of a meromorphic connection with a lattice	13
2.2 The Birkhoff problem	15
3 Logarithmic vector fields and the logarithmic de Rham complex	21
3.1 Logarithmic forms and vector fields	21
3.2 The relative de Rham complex	27
4 Functions on prehomogeneous discriminants and their Milnor fibrations	33
4.1 \mathcal{R} -finiteness of linear functions on discriminants	35
4.2 \mathcal{R} -finiteness for reductive groups	41
4.3 Restrictions to the Milnor fiber	44
5 The Gauss-Manin System associated to a linear section of the Milnor fibration	47
5.1 The localized Gauss-Manin system	48
5.2 The partial Fourier Laplace transform of the Gauss-Manin system	53

6	The Bernstein-Sato polynomial	61
6.1	The Bernstein-Sato polynomial of the V -filtration	62
6.2	A comparison of the Bernstein-Sato polynomial with the spectral polynomial	65
7	Quivers and their representation theory	75
7.1	Quiver representations - an algebraic point of view	76
7.2	Quiver representations - a geometric point of view	81
7.3	Equations for the fundamental semi-invariants	88
7.4	Example - Finding equations for E_6	91
8	Calculations for classical Singularities	101
8.1	The exponent condition and the invariant subspace conjecture	105
8.2	Semi-invariants and spectrum for A_n	111
8.3	Semi-invariants and spectrum for D_n	112
8.4	Semi-invariants and spectrum for E_6	115
8.5	Semi-invariants and spectrum for E_7	126
8.6	The serie $B_{n,l}$	144
9	The spectrum of the star quiver	149
9.1	A solution to the Birkhoff problem	150
9.2	Specializing the linear function	158
9.3	The spectrum of the star quiver	162
9.4	The exponent condition and the invariant subspace conjecture for the star quiver	172
10	The serie $\text{Ext}_k\text{Star}_n$	175
10.1	Constructing new Series	175
10.2	The fundamental semi-invariants of $\text{Ext}_k\text{Star}_n$	180
10.3	Calculations for $\text{Ext}_k\text{Star}_n$	182
Bibliography		189
