

TECHNISCHE
UNIVERSITÄT
DARMSTADT

Experimental Investigation of a semi-industrial Carbonate Looping Process for scale-up

am Fachbereich Maschinenbau
der Technischen Universität Darmstadt

zur Erlangung des Grades eines Doktor-Ingenieurs (Dr.-Ing.)
genehmigte

DISSERTATION

vorgelegt von

M.Sc. Jochen Bernd Ludwig Hilz

aus Frankenthal (Pfalz)

Erstgutachter: Prof. Dr.-Ing. Bernd Epple
Zweitgutachter: Prof. Dr.-Ing. Christian Hasse

Tag der Einreichung: 16.04.2019
Tag der mündlichen Prüfung: 12.06.2019

Darmstadt 2019

Table of Contents

Preface	iii
Abstract	iv
Table of Contents	vi
1 Introduction	1
1.1 The Potential of Carbon Capture and Storage/Utilization Technologies	2
1.2 Technologies for CO ₂ Capture	3
1.3 CO ₂ Processing, Transportation, Storage and Utilization	5
1.4 Costs of CO ₂ Capture	6
1.5 Research Motivation	7
1.6 Outline of the Thesis	8
2 State of the Art of the Carbonate Looping Process	11
2.1 Carbonate Looping Process Configurations	12
2.1.1 Directly Heated Carbonate Looping Process	12
2.1.2 Indirectly Heated Carbonate Looping Process	13
2.2 Fundamentals of the CaL Process	14
2.2.1 Chemical Equilibrium of CaO-CaCO ₃	14
2.2.2 Reaction Kinetics of Carbonation/Calcination	16
2.2.3 Deactivation of Sorbent	18
2.2.4 Abrasion of Sorbent	24
2.3 Fundamentals of Fluidized Bed Technology	25
2.3.1 Formation and Characterization of Fluidized Beds	25
2.3.2 Geldart Particle Classification	29
2.4 Evaluation Parameters of the Carbonate Looping Process	31
2.5 Overview of Carbonate Looping Pilot Testing	33
3 Experimental Setup	39
3.1 1 MW _{th} pilot plant	39
3.2 Measuring Systems	42
3.2.1 Pressure	43
3.2.2 Temperature	44
3.2.3 Flow	45
3.2.4 Gas Composition	47
3.2.5 Sorbent Analysis	48
3.2.6 Uncertainties	48
3.3 Fuels	50
3.4 Sorbent	51
4 Results of Experiments	53
4.1 Steady-State Operation	53
4.2 Heat and Mass Balance	57

4.3	Operational Range	59
4.3.1	Hydrodynamics	60
4.3.2	Temperatures	64
4.4	Carbonator Evaluation	65
4.4.1	Temperature	65
4.4.2	Closure of CO ₂ Balance	67
4.4.3	Active Space Time	68
4.4.4	Inventory	70
4.4.5	Make-up Ratio	72
4.4.6	Sorbent Looping Ratio	75
4.5	Calcliner Evaluation	76
4.5.1	Active Space Time	77
4.5.2	Temperature and CO ₂ Concentration	79
4.5.3	Fuel Type	80
4.5.4	Fuel Particle Size	84
4.5.5	Heat Demand	87
4.6	Conclusions of Pilot Tests and Optimization Potentials	90
5	Design of a 20 MW_{th} Demonstration Pilot	95
5.1	Boundary Conditions	96
5.2	Plant Setup	97
5.3	Definition of Operating Parameters	99
5.3.1	Design Parameters	99
5.3.2	Operating Points	103
5.3.3	Heat and Mass Balance	105
5.4	Assessment of the Demonstration Plant	106
6	Conclusions and Outlook	111
	Nomenclature	vii
	Bibliography	xii
	List of Figures	xxvii
	List of Tables	xxix
	Appendix	xxxii
A.1	Results from Solid Analysis	xxxii
A.2	Overview of Test Campaigns	xli
	Publications and Presentations	xlix
