

# **Development of an accurate and efficient PNO-based local coupled cluster method**

A dissertation accepted by the  
**Faculty of Chemistry of the University of Stuttgart**  
for the degree of  
**Doctor of Natural Sciences (Dr. rer. nat.)**

presented by

**Max Schwilk**

**Born in Ulm, Germany.**

Examiner: Prof. Dr. Hans-Joachim Werner

Co-examiner: Prof. Dr. Christian Ochsenfeld

Additional examiner: Prof. Dr. Wolfgang Kaim

Oral examination date: 27th July 2018

Institute for Theoretical Chemistry, University of Stuttgart

Year of publication: 2019

# Contents

<b>1</b>	<b>Indices, acronyms, and abbreviations</b>	<b>1</b>
<b>2</b>	<b>Abstract</b>	<b>5</b>
<b>3</b>	<b>Zusammenfassung</b>	<b>7</b>
<b>4</b>	<b>Introduction</b>	<b>9</b>
<b>5</b>	<b>Theoretical background</b>	<b>17</b>
5.1	Creation and annihilation operators . . . . .	17
5.2	Time-independent Wick's theorem . . . . .	19
5.3	Definition of a fixed reference state . . . . .	20
5.4	Generalized time-independent Wick's theorem . . . . .	21
5.5	Diagrammatic notation . . . . .	22
5.6	Characteristics of the coupled cluster method . . . . .	25
5.7	Møller-Plesset perturbation theory (MPPT) . . . . .	28
5.8	The link between coupled cluster and MPPT . . . . .	31
5.9	The coupled cluster residual equations . . . . .	32
<b>6</b>	<b>Local pair natural orbitals based coupled cluster</b>	<b>39</b>
6.1	Benchmark systems . . . . .	39
6.2	Basis sets for accurate coupled cluster methods . . . . .	46

6.3	Local occupied and virtual orbitals . . . . .	49
6.3.1	Localized occupied orbitals . . . . .	50
6.3.2	Projected Atomic Orbitals (PAOs) . . . . .	50
6.3.3	Pair natural orbitals (PNOs) . . . . .	53
6.3.4	Orbital specific virtuals (OSVs) . . . . .	55
6.4	Closed shell coupled cluster with local orbitals . . . . .	56
6.5	Domain approximations and domain corrections . . . . .	64
6.6	The PNO-LCCSD residual equations in algebraic notation . . . . .	72
6.7	Pair approximations . . . . .	75
6.7.1	Very distant pair and distant pair approximations . . . . .	77
6.7.2	Weak, close, and strong pair approximations . . . . .	82
6.8	Local density fitting and integral transformations . . . . .	94
6.9	Projection approximations . . . . .	98
6.10	Local PNO-based F12 contributions . . . . .	106
6.10.1	Local F12-specific pair approximations . . . . .	113
6.10.2	Local F12-specific domain approximations . . . . .	115
6.11	Local PNO-based perturbative triples correction . . . . .	116
6.12	Local coupled cluster and many-body interactions . . . . .	118
6.13	Solving of the residual equations . . . . .	121
6.14	Parallel implementation . . . . .	123
6.15	Performance and scalability . . . . .	125
6.15.1	General computational cost . . . . .	125
6.15.2	Scaling with molecular size . . . . .	128
6.15.3	Scaling with the number of processors . . . . .	130
<b>7</b>	<b>Benchmark applications</b> . . . . .	<b>133</b>
7.1	FH test set . . . . .	133

7.2	Isomerization energies . . . . .	134
7.3	Intermolecular interactions . . . . .	138
7.4	Reactions involving large molecules . . . . .	143
7.4.1	Local errors of PNO-LCCSD . . . . .	143
7.4.2	Local errors of PNO-LCCSD-F12 . . . . .	143
7.5	Smooth potential energy surfaces . . . . .	150
<b>8</b>	<b>Summary</b>	<b>157</b>
	<b>Bibliography</b>	<b>161</b>
