
Photogrammetry and distinct element geomechanical modelling of sinkholes and large-scale karstic depressions

Djamil Al-Halbouni

Cumulative dissertation

to obtain the academic degree "doctor rerum naturalium" (Dr. rer. nat.)
in the scientific discipline Geophysics.

Submitted to the
Faculty of Mathematics and Natural Sciences
at the University of Potsdam, Germany.

Prepared at Section 2.1 - Physics of Earthquakes and Volcanoes,
Department of Geophysics, Helmholtz Centre Potsdam -
GFZ German Research Centre for Geosciences.
&
Institute of Geosciences, University of Potsdam, Germany.

Date of disputation: 19 June 2019

Table of Contents

Abstract	vii
List of Figures	ix
1 Introduction	1
1.1 Sinkholes in karst dominated regions	1
1.2 The Dead Sea sinkhole hazard	3
1.3 Geomechanical numerical modelling of collapse processes	6
1.4 Structure of this cumulative thesis	7
1.4.1 Publications as chapters of this thesis	8
1.4.2 Further relevant publications	9
2 Objectives and methods	11
2.1 Research questions	11
2.2 Applied methods	12
3 Publication 1 - Sinkholes, subsidence and subsrosion on the eastern shore of the Dead Sea as revealed by a close-range photogrammetric survey	15
4 Publication 2 - Geomechanical modelling of sinkhole development using distinct elements: model verification for a single void space and application to the Dead Sea area	37
5 Publication 3 - Distinct element geomechanical modelling of the formation of sinkhole clusters within large-scale karstic depressions.	71
6 Summary and discussion of major findings	95
6.1 Spatio-temporal development and morphometrics of sinkholes and ground features in an active karst area	95
6.2 A distinct element modelling approach to simulate large-scale ground subsidence . .	96
6.3 Mechanical development of sinkhole clusters and depressions	97
6.4 Relation of the sinkhole formation process to geophysical parameters of the subsurface	98
7 Perspectives	103
7.1 Advanced modelling	103
7.2 Monitoring systems and early warning	107
7.3 Fault control on sinkhole formation	108
8 Conclusion	111
Bibliography	113
A Supplementary information on parameter tracking	123
A.1 Implementation of acoustic emission tracking in PFC	123
A.2 Example of a tracked single void simulation	125
