

Novel pre-stack data confinement and selection for
magnetotelluric data processing and its application to data of
the Eastern Karoo Basin, South Africa

Anna Platz

Univ.-Diss.

zur Erlangung des akademischen Grades

”doctor rerum naturalium”

(Dr. rer. nat.)

in der Wissenschaftsdisziplin “Angewandte Geophysik”

eingereicht an der

Mathematisch-Naturwissenschaftlichen Fakultät

Abstract	v
Acknowledgements	vii
List of Figures	xiii
List of Tables	xvi
Nomenclature	xvii
Introduction	1
1 Theory of the magnetotelluric method and its data processing	5
1.1 Introduction to the magnetotelluric method	5
1.2 Transfer functions	6
1.3 Introduction to the magnetotelluric data processing	9
1.4 Estimation of transfer functions	10
1.5 Robust processing techniques	11
2 New data confinement and selection criteria	15
2.1 Introduction of the Mahalanobis distance (MD)	17
2.2 Data confinement with the Mahalanobis distance	19
2.3 Estimation scheme of the Mahalanobis distance criterion	21
2.3.1 Robust calculation of Mahalanobis distances	21
2.3.2 Implementation of a deterministic MCD algorithm	25
2.4 Combination of the Mahalanobis distance criterion with other data selection criteria	32
2.5 Application of the Mahalanobis distance criterion to different data sets	36
2.5.1 Scattered distributions	36
2.5.2 Two spatially separated distributions	37
2.5.3 Two merged distributions I	39
2.5.4 Two merged distributions II	41
2.5.5 Application to remote reference processing	43

Contents

2.5.6	Application to vertical and inter-station transfer functions	45
2.6	Conclusion of the Mahalanobis distance criterion	46
2.7	Introduction of the magnetic polarisation direction criterion	47
2.8	Implementation of the magnetic polarisation direction criterion	48
2.9	Application of the magnetic polarisation direction criterion	52
2.9.1	Distinct polarisation bands	52
2.9.2	Complex polarisation pattern	54
2.10	Conclusion of the magnetic polarisation direction criterion	55
2.11	Chapter summary	56
3	Magnetotelluric study of the Karoo Basin	57
3.1	Geological background	58
3.2	Existing scientific studies	63
3.3	Magnetotelluric measurements	66
3.3.1	Data acquisition	66
3.3.2	Processing results	67
3.3.3	Data interpretation	70
4	Inversion	77
4.1	Basic description of 3D inversion of MT data with ModEM	77
4.2	Deriving a 3D model for the Karoo data set	80
4.2.1	Model setup	81
4.2.2	Inversion of individual transfer functions	83
4.2.3	Synthetic case study to test different transfer function combinations	86
4.2.4	Joint inversions and the preferred model for the Karoo data set	91
4.2.5	Resolution study of the preferred model	95
4.3	Analysis of different parameters of the target horizon	100
4.3.1	Conductivity of the target horizon	100
4.3.2	Potential areas of lower electrical conductivity	101
4.3.3	Thickness of the target horizon	103
4.4	Chapter Summary	105

5 Summary	107
Appendix	113
Bibliography	123
