Geomikrobiologie - Organische Geochemie

Biosignatures of Present and Past Microbial Life in Southern African Geoarchives

STEFFI GENDERJAHN

Kumulative Dissertation
zur Erlangung des akademischen Grades
"doctor rerum naturalium" (Dr. rer.nat.)
in der Wissenschaftsdisziplin "Mikrobiologie" vorgelegt an der
Mathematisch-Naturwissenschaftlichen Fakultät
der Universität Potsdam

Potsdam

Eingereicht am 18.07.2017

Wissenschaftlichen Aussprache: 07.03.2018

Contents

Preface	III
Acknowledgement	IV
List of Publications	VI
Summary	VIII
Zusammenfassung	X
Contents	1
Abbreviations	6
List of Figures	8
List of Tables	10
1 Introduction	11
1.1 Motivation	11
1.2 Climatic conditions in Southern Africa	12
1.3 Climate reconstruction of Southern Africa	13
1.4 Continental pans as a climate archive in the Kalahari region	14
1.5 Microbial communities in saline environments	16
1.6 Molecular ecological and biogeochemical methodology	19
1.7 Study sites	23

1.8	Objectives	25
1.9	Thesis Organization	26
2	Present and past microbial life in continental pan sediment and its response to climate variability in the southern Kalahari	31
2.1	Abstract	31
2.2	Introduction	32
2.3	Material and methods	37
2.3.1	Study site	37
2.3.2	Sampling and sample material	39
2.3.3	Total organic carbon	40
2.3.4	Ion chromatography	40
2.3.5	Lipid biomarker analyses	40
2.3.6	Detection of phospholipid fatty acids (PLFAs)	41
2.3.7	Detection of intact phospholipid esters and ethers	42
2.3.8	Detection of glycerol dialkyl glycerol tetraethers (GDGTs)	42
2.4	Results	43
2.4.1	Abiotic and biotic parameters	43
2.4.2	Analyses of phospholipid fatty acids (PLFA) life markers and intact archaeal lipids	46
2.4.3	Analyses of the past microbial biomarkers	46
2.5	Discussion	48
2.5.1	Pan deposits as life habitat for microorganisms	48
2.5.2	Living microbial communities in pan deposits	49
2.5.3	Past microbial response to climate changes in southern Kala- hari pan deposits	55
2.6	Conclusion	61
2.7	Acknowledgments	62

3	Microbial community structure and variations in past microbial signatures to changing climatic conditions in Omongwa pan, western Kalahari	63
3.1	Abstract	63
3.2	Introduction	64
3.3	Material and Methods	68
3.3.1	Study Site	68
3.3.2	Sampling and sample material	70
3.3.3	Sediment properties	71
3.3.4	DNA extraction and preparation of Next Generation Sequencing	71
3.3.5	Processing next generation sequencing data	72
3.3.6	Quantitative Polymerase Chain Reaction (qPCR) analysis of archaeal and bacterial SSU rRNA genes	73
3.3.7	Lipid biomarker analysis	74
3.3.8	Detection of life markers	74
3.3.9	Detection of past microbial markers	75
3.4	Results	76
3.4.1	Analysis of sediment properties	76
3.4.2	Quantification of bacterial and archaeal genes	78
3.4.3	Analyses of the microbial community composition (NGS)	79
3.4.4	Depth distribution of present and past microbial lipid biomarkers	83
3.5	Discussion	85
3.5.1	Modern microbial community structure in Omongwa pan sed- iments	85
3.5.2	Biomarker signals of living microbial communities	89
3.5.3	Lipid biomarkers as indicator for past microbial communities and past environmental conditions	90
3.6	Conclusion	93

3.7	Acknowledgment	94
4	Characterization of archaeal and bacterial diversity in pan sedi- ments of the Kalahari Desert	95
4.1	Abstract	95
4.2	Introduction	96
4.3	Material and Methods	100
4.3.1	Study sites and sampling	100
4.3.2	Quantification of Phospholipid derived Fatty Acids	101
4.3.3	Sediment properties	102
4.3.4	DNA Extraction and Preparing Next Generation Sequencing	102
4.3.5	Processing Next Generation Sequencing data	103
4.4	Results	104
4.4.1	Abiotic and biotic parameters	104
4.4.2	Microbial community composition of Witpan	106
4.4.3	Microbial community of Omongwa pan	109
4.4.4	Analyses of Phospholipid Fatty acids (PLFAs) of Witpan and Omongwa pan	109
4.4.5	Statistical analyses and description of core taxa among two different continental pans	110
4.5	Discussion	114
4.5.1	Geochemical features and microbial community in Witpan de- posits	114
4.5.2	Comparison of two different continental pans as a life habitat for microorganisms	118
4.6	Conclusion	123
4.7	Acknowledgment	124
5	Synthese and Outlook	125

5.1	Introduction	125
5.2	Microbial communities in pan sediments in the southern Kalahari . .	126
5.3	The response of microbial communities to past climate changes in the Southern Kalahari	132
5.4	Conclusion	135
5.5	Outlook	135
	Bibliography	137
	A Supplemental Data	i
	B Molecular Structures	iii
	C Data collection	viii
