

Aitber Bizhanov · Valentina Chizhikova

Agglomeration in Metallurgy

 Springer

Contents

1 Sinter Production	1
1.1 General Information About the Sintering Process	1
1.2 Raw Materials of the Sintering Process	7
1.3 Preparation of Charge Components for Sintering (Crushing, Dosing, Mixing, Pelletizing)	13
1.3.1 Dosing of the Components of the Sinter Charge	14
1.3.2 Pelletizing of the Sinter Charge	16
1.4 Mass Exchange Processes in the Sintering Layer	42
1.4.1 Chemical Reactions with Participation of Solid Phases	43
1.4.2 Processes in the Formation of the Liquid Phase During Melting	56
1.4.3 Processes During Solidification (Crystallization) of the Melt	57
1.5 Heat Transfer in the Sintering Layer	58
1.5.1 General Information on the Sintering Heat Exchange	58
1.5.2 Zonal Heat Balances of Sintered Layer	61
1.5.3 Mathematical Model of Heat Exchange During Sintering	65
1.5.4 Three-Dimensional Mathematical Model of the Sintering Process	67
1.5.5 Calculation of the Specific Yield of the Sintering Gas	71
1.5.6 Vertical Sintering Speed	72
1.6 The Gas Dynamics of the Sintering Process	73
1.6.1 The Basic Equation of Dynamics of the Porous Layer	73
1.6.2 Gas-Dynamic Resistance Coefficients	74
1.6.3 Porosity of the Sintering Layer	76
1.6.4 Gas Dynamics of Sintering Technology	77
1.6.5 Sinter Machine Performance	80
1.6.6 Ways to Improve the Performance of Sintering Machines	81

1.7	Quality of the Sinter in Terms of Influence on the Performance of Blast Furnace Smelting	88
1.7.1	Sinter Quality Indicators	88
1.7.2	Influence of Sinter Quality on Gas-Dynamic Parameters of Blast Furnace Smelting	90
1.7.3	Requirements for Sinter Quality	93
1.7.4	Basic Solutions to Improve Quality of Sinter.	99
1.7.5	Technology of Sintering Under Pressure	116
1.8	Energy Efficiency of the Sintering Technology	118
1.9	Environmental Aspects of Sinter Production (Best Available Technologies).	123
1.9.1	Thermodynamic Modeling of Emissions in the Sintering Process	124
1.9.2	Characteristics of Emissions from Sinter Production	126
1.9.3	Influence of Technological Factors on the Emission of Pollutants During Sintering	128
1.9.4	Environmental Requirements as the Main Priority of Production Modernization	133
1.9.5	Waste Gas Recirculation Concept	148
1.9.6	Recommendations on the Best Available Technologies (BAT) in Sintering	159
1.9.7	Sinter Plant Without Chimney	161
	References	165
2	Pellet Production	171
2.1	General Information About Pellet Production	171
2.1.1	Technological Scheme of the Production of Pellets	171
2.1.2	Formation of Raw Pellets	174
2.1.3	Strengthening of Raw Pellets	176
2.2	Charge Components for the Production of Pellets	179
2.3	Formation of Raw Pellets	184
2.3.1	Interaction Between Wetted Particles During the Formation of a Raw Pellet	184
2.3.2	The Nature of the Action of Binding Additives in the Strengthening of Raw Pellets	187
2.3.3	The Effectiveness of Various Strengthening Additives in Pelletizing	189
2.4	Cold-Bonded Pellet Production	200
2.4.1	General Information About Cold Agglomeration	200
2.4.2	Strengthening Mechanism of Portland Cement Binders	201
2.4.3	Cold Strengthening Under Normal Conditions	203
2.4.4	Cold Agglomeration at Moderate Temperatures	205

2.4.5	Cold Agglomeration with Accelerated Strengthening	206
2.4.6	Advantages of Cold Agglomeration Method	208
2.5	Strengthening Pellets with Thermal Methods	208
2.5.1	Phenomenology of Mass Transfer Processes During Heat Treatment of Pellets	210
2.5.2	Simulation of Mass Transfer Processes During Heat Treatment of Pellets	212
2.5.3	Pellet Roasting as a Complicated Case of Sintering	226
2.5.4	The Pellet Macrostructure and Strength	247
2.6	Metallurgical Properties of Iron Ore Pellets	251
2.6.1	Pellet Quality Test Methods	251
2.6.2	Quality Requirements for Pellets	254
2.6.3	Basic Solutions for Improving the Quality of Pellets	258
2.7	Resource Saving in the Production of Pellets	268
2.7.1	Resource Consumption in the Production of Pellets	268
2.7.2	Energy Efficiency of Conveyor Machines as Units for Pellets Roasting	269
2.7.3	Best Available Technologies (BAT) in the Production of Pellets Aimed at Improving Energy Efficiency	272
2.8	Environmental Aspects of Pellet Production	274
2.8.1	General Characteristics of Emissions to the Environment in the Production of Pellets	274
2.8.2	Sources of Emissions from Technological Operations in the Production of Pellets	276
2.8.3	The Best Available Technology in the Production of Pellets	280
	References	282
3	Briquetting	287
3.1	General Information on Briquetting of Natural and Anthropogenic Raw Materials	287
3.2	History of the Industrial Briquetting in Ferrous Metallurgy	291
3.2.1	Beginning of the Twentieth Century—The 20s of the Twentieth Century	297
3.2.2	30–50s of the Twentieth Century	304
3.2.3	60–70s of the Twentieth Century	307
3.2.4	The 80s—The End of the Twentieth Century	314
3.2.5	Twenty-First Century	321
3.3	Basic Materials for Briquetting	328
3.3.1	Mining and Beneficiation of Ores	328
3.3.2	Sinter and Pellet Production	330
3.3.3	Coke Production	330
3.3.4	Blast Furnace Production	331

3.3.5	Steelmaking	331
3.3.6	Rolling Production	332
3.3.7	Ferroalloy Production	333
3.3.8	Direct Iron Production	334
3.4	Basic Industrial Technologies of Briquetting in Ferrous Metallurgy	334
3.4.1	Briquetting Using Roller Presses	334
3.4.2	Vibropressing for Briquetting	342
3.4.3	Stiff Vacuum Extrusion Briquetting Technology	351
3.5	Requirements to Metallurgical Properties of Briquettes	370
3.5.1	Briquetting of Natural and Anthropogenic Materials in Blast Furnace (BF) Production	370
3.5.2	Briquetting of Natural and Anthropogenic Raw Materials for Ferroalloy Production	397
3.5.3	Briquetting in Direct Reduced Iron (DRI) Production	428
	References	441
4	Best Available Technologies for Agglomeration of the Raw Materials for Blast Furnaces	449
4.1	Production of Sinter as a BAT	449
4.2	Production of Pellets as a BAT	451
4.3	Stiff Extrusion Briquetting as a BAT	452
4.4	Comparative Analysis of Technologies for Agglomeration of the Raw Materials for Blast Furnace	453
	References	454
