Contents

Preface **ix**

1 Complex Numbers **1**
1.1 How to think about different types of numbers 1
1.2 Definition of complex numbers 2
1.3 The complex number plane as a tool for planar geometry 8
1.4 Stereographic projection 10
1.5 Supplementary materials 11
1.6 Exercises 12

2 Functions of a Complex Variable **17**
2.1 Derivative 19
2.2 Some elementary functions generalized to complex argument by means of their Taylor expansion 22
2.3 Additional observations on Taylor expansions of analytic functions . . 33
2.4 Singularities 38
2.5 Multivalued functions—Branch cuts and Riemann sheets 43
2.6 Sequences of analytic functions 51
2.7 Functions defined by integrals 54
2.8 Supplementary materials 56
2.9 Exercises 62

3 Analytic Continuation **71**
3.1 Introductory examples 71
3.2 Some methods for analytic continuation 73
3.3 Exercises 89

4 Introduction to Complex Integration **93**
4.1 Integration when a primitive function $F(z)$ is available 95
4.2 Contour integration 97
4.3 Laurent series 106
4.4 Supplementary materials 112
4.5 Exercises 114

5 Residue Calculus **119**
5.1 Residue calculus 119
5.2 Infinite sums 148

5.3 Analytic continuation with use of contour integration 152
5.4 Weierstrass products and Mittag–Leffler expansions 160
5.5 Supplementary materials 165
5.6 Exercises 166

6 Gamma, Zeta, and Related Functions **173**
6.1 The gamma function 173
6.2 The zeta function 176
6.3 The Lambert W-function 181
6.4 Supplementary materials 184
6.5 Exercises 186

7 Elliptic Functions **191**
7.1 Some introductory remarks on simply periodic functions 191
7.2 Some basic properties of doubly periodic functions 191
7.3 The Weierstrass $\wp$-function 194
7.4 The Jacobi elliptic functions 197
7.5 Supplementary materials 203
7.6 Exercises 207

8 Conformal Mappings **209**
8.1 Relations between conformal mappings and analytic functions 211
8.2 Mappings provided by bilinear functions 212
8.3 Riemann's mapping theorem 214
8.4 Mappings of polygonal regions 215
8.5 Some applications of conformal mappings 219
8.6 Revisiting the Jacobi elliptic function $\mathrm{sn}(z, k)$ 222
8.7 Supplementary materials 226
8.8 Exercises 227

9 Transforms **231**
9.1 Fourier transform 231
9.2 Laplace transform 245
9.3 Mellin transform 255
9.4 Hilbert transform 259
9.5 z-transform 264
9.6 Three additional transforms related to rotations 264
9.7 Supplementary materials 266
9.8 Exercises 268

10 Wiener–Hopf and Riemann–Hilbert Methods **273**
10.1 The Wiener–Hopf method 273
10.2 A brief primer on Riemann–Hilbert methods 286
10.3 Supplementary materials 288
10.4 Exercises 289

11 Special Functions Defined by ODEs **291**
11.1 Airy's equation 292
11.2 Bessel functions 293

11.3 Hypergeometric functions 299
11.4 Converting linear ODEs to integrals 303
11.5 The Painlevé equations 307
11.6 Exercises 314

12 Steepest Descent for Approximating Integrals **317**
12.1 Asymptotic vs. convergent expansions 317
12.2 Euler–Maclaurin formula 319
12.3 Laplace integrals 322
12.4 Steepest descent 329
12.5 Supplementary materials 346
12.6 Exercises 350

Bibliography **355**
