Representations and Nilpotent Orbits of Lie Algebraic Systems

In Honour of the 75th Birthday of Tony Joseph
Contents

Singular Support of a Vertex Algebra and the Arc Space of Its Associated Scheme ......................................................... 1
Tomoyuki Arakawa and Andrew R. Linshaw

On Cacti and Crystals .............................................................. 19
Arkady Berenstein, Jacob Greenstein, and Jian-Rong Li

Quotients for Sheets of Conjugacy Classes ........................................ 73
Giovanna Carnovale and Francesco Esposito

About Polynomiality of the Poisson Semicentre for Parabolic Subalgebras ......................................................... 91
Florence Fauquant-Millet

On Dynkin Gradings in Simple Lie Algebras .................................... 111
Alexander Elashvili, Mamuka Jibladze, and Victor Kac

Multiplicative Slices, Relativistic Toda and Shifted Quantum Affine Algebras ......................................................... 133
Michael Finkelberg and Alexander Tsymbaliuk

Some Properties of Orbital Varieties in Extremal Nilpotent Orbits ........ 305
Lucas Fresse

On Involutions in the Weyl Group and B-Orbit Closures in the Orthogonal Case ......................................................... 331
Mikhail V. Ignatyev

Proper Self-Similar Triangle Tiling and Representing Weight Diagrams in the Plane ......................................................... 357
Anthony Joseph

Closures of $O_n$-Orbits in the Flag Variety for $GL_n$ ......................... 411
William M. McGovern
The Spin Calogero-Sutherland Model at Infinity ........................................... 421
Maxim Nazarov

Semi-Direct Products Involving $\text{Sp}_{2n}$ or $\text{Spin}_n$ with Free Algebras of Symmetric Invariants ................................................................. 441
Dmitri I. Panyushev and Oksana S. Yakimova

Primitive Ideals of $\text{U}(\mathfrak{sl}(\infty))$ and the Robinson–Schensted Algorithm at Infinity ................................................................. 471
Ivan Penkov and Alexey Petukhov

Prime Spectra of Abelian 2-Categories and Categorifications of Richardson Varieties ................................................................. 501
Kent Vashaw and Milen Yakimov
