Constraining the Hydrology at Minas da Panasqueira W-Sn-Cu Deposit, Portugal

Cumulative dissertation
for the academic degree
"Doctor of Philosophy"
in the scientific discipline of Geochemistry

submitted to the
Faculty of Science of the
University of Potsdam

by
Marta Sofia Ferreira Codeço
born in Arcos de Valdevez, Portugal
Potsdam, June 2019

Defense date: 18.04.2019

ABSTRACT	i
ZUSAMMENFASSUNG	iii
RESUMO	v
CONTENTS	ix
LIST OF FIGURES	xv
LIST OF TABLES	xix
ACKNOWLEDGMENTS	xxi
LIST OF PUBLICATIONS	xxv
PRESENTATIONS	xxvii
1 INTRODUCTION	1
1.1 Preamble	1
1.2 Economic importance of the W and Sn commodities	2
1.3 Tin-tungsten ore deposits	7
1.4 Numerical modeling of magmatic-hydrothermal deposits	10
1.5 Aim and significance of the thesis	10
1.6 Structure of this thesis	13

2	BACKGROUND	17
2.1	Geological and Metallogenic Setting	17
2.1.1	The Variscan Orogeny and the European Variscides	17
2.1.2	The Iberian Massif	20
2.1.3	Central Iberian Zone	20
2.1.4	Variscan Magmatism	23
2.1.5	Metallogeny	25
2.2	Minas da Panasqueira	28
2.2.1	Historical Background	29
2.2.2	State of the Art	32
3	CHEMICAL AND $\delta^{11}B$ COMPOSITIONS OF TOURMALINE FROM PANASQUEIRA	37
3.1	Introduction	39
3.2	Geological background and previous work	40
3.3	Tourmaline occurrence and sampling strategy	43
3.3.1	Tourmaline in the wall rock alteration zones	44
3.3.2	Tourmaline in the mineralized W-Sn-Cu veins	46
3.4	Analytical methods	47
3.4.1	Electron microprobe	47
3.4.2	Secondary ion mass spectrometry	48
3.5	Results	49
3.5.1	Chemical composition of tourmaline	50
3.5.1.1	General features of major element composition and classification.	50
3.5.1.2	Variations in tourmaline composition	58
3.5.2	Boron isotopic compositions of tourmaline	61
3.5.3	Ti-in-quartz geothermometry	62
3.6	Discussion	65
3.6.1	Tourmaline zoning and host rock vs. fluid controls on composition .	65

3.6.2	B-isotope constraints on the fluid source	69
3.6.3	Chemical and B-isotope variations during fluid evolution	71
3.6.4	Late-stage vug-filling needles and multiple fluid pulses	73
3.7	Conclusions	74
4	BORON-ISOTOPE MUSCOVITE-TOURMALINE GEOTHERMOMETRY	77
4.1	Introduction	78
4.2	Boron isotopes systematics	79
4.3	The Panasqueira W-Sn-Cu deposit	81
4.3.1	The composition of Panasqueira tourmaline	82
4.4	Samples and Methods	83
4.4.1	Samples studied	83
4.4.2	Electron microprobe analyses	85
4.4.3	Solution inductively coupled plasma-mass spectrometry	85
4.4.4	Secondary ion mass spectrometry	86
4.5	Results	87
4.5.1	Chemical compositions of white micas	87
4.5.2	B-isotope compositions of white micas	88
4.6	Discussion	91
4.6.1	Variations in mica compositions	91
4.6.2	B-isotope geothermometry from tourmaline-mica pairs	91
4.6.3	Fluid evolution at Panasqueira	93
4.6.4	Applicability to other hydrothermal systems	95
4.7	Conclusions	95
5	TRACE ELEMENTS IN WHITE MICA AND TOURMALINE: THEIR VALUE AS PATHFINDERS	101
5.1	Introduction	102
5.2	Mica and tourmaline crystal chemistry	104

5.3	Geology of Panasqueira deposit	105
5.3.1	Geological setting	105
5.3.2	White mica and tourmaline in the deposit	107
5.3.3	Chemical compositions of mica and tourmaline: previous work . . .	109
5.4	Samples and Methods	112
5.4.1	Samples	112
5.4.2	Whole-rock geochemistry	113
5.4.3	Laser ablation-ICP-MS	115
5.4.4	Principal Component Analysis	116
5.5	Results	117
5.5.1	Whole rock composition	117
5.5.2	Trace-element compositions of white mica and tourmaline	119
5.5.2.1	White mica	119
5.5.2.2	Tourmaline	123
5.6	Discussion	125
5.6.1	Constraining the composition of the hydrothermal fluid	125
5.6.2	Element partitioning in tourmaline and mica and their value as pathfinders	130
5.6.3	Mica as a pathfinder	133
5.6.4	Tourmaline as a pathfinder	135
5.7	Conclusions	137
6	NUMERICAL SIMULATIONS OF FLUID FLOW PATTERNS	141
6.1	Introduction	142
6.2	Geological Setting	143
6.2.1	Regional Context	143
6.2.2	The Panasqueira vein swarm	144
6.3	Methods	147
6.3.1	Governing Equations	147

6.3.2	Representation of fractures and faults	148
6.3.3	Model configuration	150
6.4	Results	152
6.4.1	Simple horizontal fracture	152
6.4.2	Panasqueira hydrothermal system	153
6.5	Discussion	160
6.5.1	The hydrological evolution at Panasqueira	160
6.5.2	Model limitations and future objectives	162
6.6	Conclusions	163
7	CONCLUSIONS	165
7.1	Overall conclusions and outlook	166
7.2	Future work directions	168
	BIBLIOGRAPHY	169
A	SAMPLING STRATEGY	219
B	WHITE MICA NORMALIZATION	223
C	SUPPLEMENT TO CHAPTER 5	225
