

Development of Density Reduced Mo-Si-B Alloys

Dissertation

zur Erlangung des akademischen Grades

Doktoringenieurin
(Dr.-Ing.)

von M.Sc. Julia Becker
geboren am 07.12.1989 in Schönebeck (Elbe)
genehmigt durch die Fakultät für Maschinenbau
der Otto-von-Guericke-Universität Magdeburg

Gutachter:

Prof. Dr.-Ing. habil. Manja Krüger

Prof. Dr.-Ing. Birgit Skrotzki

Promotionskolloquium am 18.12.2019

Contents

1 Motivation and objective	1
2 Mo-alloys for high temperature applications	5
2.1 Multiphase Mo-Si-B alloys	5
2.2 Approaches for density reduction by micro- and macroalloying	12
2.3 Deformation behavior of Mo-based alloys	17
2.4 Oxidation behavior of Mo-Si-B alloys	24
3 Materials and methods	29
3.1 Alloy preparation	29
3.1.1 Powder metallurgy	29
3.1.2 Arc-melting	31
3.2 Metallographic preparation and microstructure characterization	32
3.3 X-ray diffraction analysis (XRD) and Rietveld method	34
3.4 Powder characterization	35
3.5 Density functional theory (DFT) simulation	36
3.6 Mechanical properties	37
3.6.1 Microhardness testing	37
3.6.2 Fracture toughness - Notched beam method	37
3.6.3 Mechanical testing from RT up to elevated temperatures	39
3.7 Cyclic oxidation experiments	40
4 Experimental results and discussion	43
4.1 Alloying effects in Mo solid solutions	43
4.1.1 Microstructural features of Mo-5X alloys	44
4.1.2 Impact of alloying on solid solution hardening and accompanied microhardness	47
4.1.3 Compressive strength and plastic deformability of Mo solid solutions	49
4.2 Density reduction of multiphase Mo-Si-B alloys by vanadium substitution .	52
4.2.1 Characterization of Mo-XV-9Si-8B powders	52
4.2.2 DFT simulation for site preference of V in $(\text{Mo}, \text{V})_5\text{SiB}_2$	57
4.3 Microstructures of solid state Mo-40V-9Si-8B alloys	64
4.4 Mechanical properties of Mo-40V-9Si-8B alloys	68
4.4.1 Room temperature fracture toughness	68
4.4.2 The brittle-to-ductile transition of FAST Mo-40V-9Si-8B	72
4.4.3 The creep performance of Mo-40V-9Si-8B alloys	75
4.5 Cyclic oxidation properties	80
