Foreword	<i>xi</i>
Preface	<i>xiii</i>
Acknowledgements	<i>xv</i>
Introduction	<i>xvii</i>

PART 1	Understanding Natural Fractures: Fracture Types, Dimensions, and Origin	1
1.1	Introduction	1
1.2	Nomenclature and Fracture-Classification Systems	1
1.2.1	Introduction	1
1.2.2	Other Classification Systems	3
1.2.3	Classifications for Fractures in Outcrops and Cores	4
1.2.4	Expulsion Fractures and Natural Hydraulic Fractures	5
1.2.5	Other Fracture Terminology	5
1.2.6	Sets, Systems, Domains, and Systematic Fractures	7
1.3	Fracture Characteristics and Dimensions	8
1.3.1	Introduction	8
1.3.2	Fracture Distribution Patterns	8
1.3.3	Fractography	10
1.3.4	Fracture Dip Angles	13
1.3.5	Fracture Distributions	13
1.3.6	Fracture Heights and Terminations	16
1.3.7	Fracture Lengths	18
1.3.8	Fracture Widths, Apertures, and Mineralization	19
1.3.9	Fracture Spacing	22
1.3.10	Fracture Strike	27
1.3.10.1	Fracture Orientations Relative to the In Situ Stresses	28
1.3.11	Discussion	28
1.4	The Mechanics of Fracturing Rock in Extension and Shear	29
1.4.1	Introduction	29
1.4.2	Origins of Geologic Stress Systems	31
1.4.2.1	Stresses in a Tectonically Quiescent Basin	31
1.4.2.2	Other Potential Sources of Horizontally Isotropic Stress	32
1.4.2.3	Stresses in a Tectonically Active Basin	32
1.4.3	Rock Susceptibility to Fracture: Basic Concepts	35
1.4.3.1	Introduction	35
1.4.3.2	Intrinsic Controls on Fracture Susceptibility	38
1.4.3.3	Extrinsic Controls on Fracture Susceptibility	39
1.4.3.4	How Rock Breaks: Grain-Scale Cracking, Yield, and Failure	41
1.4.3.5	Extrapolation to the Subsurface	43
1.4.4	Interplay Between Developing Fractures and the In Situ Stresses	44
1.4.5	The Importance of Pore Pressure	45

	1.4.5.1	Introduction	45
	1.4.5.2	The Relationship between Pore Pressure and Stress	45
	1.4.5.3	Biot's Coefficient	47
	1.4.5.4	Mohr Diagrams and Pore Pressure	47
	1.4.5.5	Pore Pressure Makes Rock Weak and Brittle	47
	1.4.5.6	Sources of Pore Pressure	50
	1.4.5.7	Alternate Theories	51
	1.4.6	Summary	52
1.5		Other Fracture Types	53
	1.5.1	Introduction	53
	1.5.2	Deformation-Band Shear Fractures, Compaction Bands, and Dilation Bands	53
	1.5.2.1	General Characteristics	53
	1.5.2.2	Dimensions and Distributions	53
	1.5.2.3	Origin	54
	1.5.3	Faults and Fractures	55
	1.5.4	Microfractures	56
	1.5.5	Stylolites and Associated Extension Fractures	59
	1.5.6	Bed-Parallel Shear Fractures	59
	1.5.7	Beef-Filled Fractures	62
	1.5.8	Ptygmatically Folded Fractures	63
	1.5.9	Alteration of Fracture Systems by Dissolution	64
APPENDIX 1.A		The Relationship Between Pore Pressure and the In Situ Effective Stresses	66
		Introduction	66
		Vertical Stress	67
		Horizontal Stress	67
		Effective Vertical Stress	67
		Effective Horizontal Stress	68
		Stress Differential	68
PART 2		Measuring and Analyzing Fractures in Reservoirs	71
	2.1	Introduction	71
	2.1.1	Reasons to Take Core	72
	2.1.2	Analyses	73
	2.1.3	Fracture Data Sources	73
	2.1.4	Quantitative vs. Semi-Quantitative Data	73
	2.1.5	Timing of a Fracture Study	73
	2.1.6	Need for Experience	74
	2.1.7	Other Data Sources	74
	2.2	Planning a Core Program for Fracture Analysis	74
	2.2.1	Introduction	74
	2.2.2	Core Diameter and Length	74
	2.2.3	Substituting Sidewall Core Samples	74
	2.2.4	Orienting a Core	74
	2.2.5	Drilling Parameters	75
	2.2.6	Trip Time for Core Recovery	75
	2.2.7	Collecting Data on Site	75
	2.2.8	Running an Image Log	76
	2.2.9	Back-to-Back Cores	76
	2.2.10	On-Site Processing	76
	2.2.11	CT Scans	77
	2.2.12	Removing Core from the Barrel	77
	2.2.13	Core-Jam Prevention Measures	77
	2.2.14	Maximizing and Documenting Core Continuity	77

- 2.2.15 Slabbing Protocol 77
- 2.2.16 Scheduling Fracture Logging and other Core Processes 78
- 2.3 Logging Core for Fractures 78
 - 2.3.1 Wash the Core! 78
 - 2.3.2 Use all the Core and Remove it from the Core Boxes 79
 - 2.3.3 Laying Out Intervals of Core for Fracture Logging 79
 - 2.3.4 Core-Logging Toolkit 80
 - 2.3.5 Recording Data 81
 - 2.3.6 Making and Using a Master Orientation Line 82
 - 2.3.7 Differentiating Natural from Induced Fractures 83
- 2.4 Taking, Measuring and Analyzing Fracture Data 84
 - 2.4.1 Fracture Type 84
 - 2.4.2 Fracture Depths: Intensity and Density 86
 - 2.4.3 Fracture Dip Angles 88
 - 2.4.3.1 Measuring Dip Angles 88
 - 2.4.3.2 Using Dip Angles 89
 - 2.4.4 Fracture Distributions 90
 - 2.4.5 Fracture Heights and Terminations 91
 - 2.4.6 Fracture Widths, Apertures, and Mineralization 94
 - 2.4.7 Fracture Spacings 98
 - 2.4.7.1 Spacings from Horizontal Core 99
 - 2.4.7.2 Spacings from Vertical Core 103
 - 2.4.7.3 Converting Vertical Observations to Horizontal Fracture Spacings 103
 - 2.4.7.4 Spacings of Inclined and Shear Fractures 105
 - 2.4.7.5 Uses of Spacings 105
 - 2.4.8 Measuring and Using Fracture Strikes 105
 - 2.4.8.1 Measuring Fracture Strikes in Vertical Core 106
 - 2.4.8.2 Measuring Fracture Strikes in Deviated or Horizontal Cores 109
- 2.5 New Core vs. Archived Core 110
- 2.6 Oriented Core 112
 - 2.6.1 Other Ways of Orienting a Core 116
- 2.7 Using CT Scans 118
- 2.8 Fracture Data from Image Logs 119
- 2.9 Comparing Fracture Data from Outcrops, Core, and Logs 122
 - 2.9.1 Introduction 122
 - 2.9.2 Large-Scale Outcrop Studies 123
 - 2.9.3 Local Outcrop Studies 123
 - 2.9.3.1 Raton Basin 123
 - 2.9.3.2 Rifle Gap 125
 - 2.9.3.3 San Ysidro 127
- 2.10 Fracture Data from 3D Seismic Surveys 128
- 2.11 Fracture Data Acquired by LiDAR 130
- 2.12 Fracture Data from Engineering Tests 132
- 2.13 Case Studies in Estimating Fracture Effectiveness from Core 133
 - 2.13.1 Introduction 133
 - 2.13.2 Case Study 1: Archived Vertical, Unoriented Core 133
 - 2.13.3 Case Study 2: New, Un-Slabbed Horizontal Core 134
 - 2.13.3.1 Introduction 134
 - 2.13.3.2 Fracture Effectiveness 137
 - 2.13.3.3 System Effectiveness and Permeability Anisotropy 137
 - 2.13.4 Case Study 3: New, Slabbed, Vertical Core 139
 - 2.13.4.1 Introduction 139
 - 2.13.4.2 Calculating Effectiveness 139
 - 2.13.4.3 Description of the High-Angle Extension Fractures 141

APPENDIX 2.A	Workflow and List of Tests, Data	144
APPENDIX 2.B	Core-Handling, Marking, Sampling, and Analysis Protocol for Core Studies Focused on Natural Fractures	144
APPENDIX 2.C	Slabbing Recommendations for Horizontal Core	146
PART 3	Effects of Natural Fractures on Reservoirs	149
3.1	Introduction	149
3.2	Classification	149
3.3	The Permeability Behavior of Individual Fractures	150
3.3.1	Introduction	150
3.3.2	Three Categories of Fracture Effects	150
3.3.3	Stylolites	154
3.3.4	Microfractures	154
3.4	The Effects of Fracture Systems	156
3.4.1	Introduction	156
3.4.2	Fracture-Controlled Permeability Anisotropy	157
3.4.2.1	Case Study: The Midale Field	157
3.4.2.2	Case Study: The Rulison Field	158
3.4.2.3	Case Study: The Spraberry Formation	158
3.4.3	Fracture-Controlled Sweet Spots	162
3.5	The Sensitivity of Fracture Permeability to Changing Stress	164
3.5.1	Stress-Sensitive Extension Fractures	164
3.5.1.1	Case Study: The Bulu Bulu Field	167
3.5.2	Stress-Sensitive Shear Fractures	169
3.5.3	Damage Due to Production-Related Scale	171
3.6	Fracture Volumetrics	172
3.6.1	Introduction	172
3.6.2	Fracture Volume/Fracture Porosity	173
3.6.3	Fracture Permeability	174
3.6.4	Transfer Function	176
3.6.5	Fracture Surface Areas	176
3.7	Effects of Fractures on Drilling and Coring	177
3.8	Completions: The Interaction Between Natural and Hydraulic Fractures	178
3.8.1	Early Conceptual Models	178
3.8.2	Direct Evidence of the Characteristics of Hydraulic Fractures	179
3.8.3	The Developing Hydraulic-Fracture Model	182
3.8.4	Nuclear Stimulations	184
