

Elements of Environmental Chemistry

Third Edition

Jonathan D. Raff and Ronald A. Hites

O'Neill School of Public and Environmental Affairs

Indiana University

Bloomington, Indiana 47408

United States

WILEY

Contents

Preface *xi*

1	Simple Tool Skills	1
1.1	Unit Conversions	1
1.2	Estimating	4
1.3	Ideal Gas Law	6
1.4	Stoichiometry	9
1.5	Thermodynamic Considerations	10
1.5.1	Enthalpy	11
1.5.2	Entropy	13
1.5.3	Gibbs Free Energy	14
1.6	Measurement Issues	15
1.7	Problem Set	24
2	Mass Balance and Kinetics	29
2.1	Steady-State Mass Balance	29
2.1.1	Flows, Stocks, and Residence Times	29
2.1.2	Adding Multiple Flows	35
2.1.3	Fluxes Are Not Flows!	37
2.2	Nonsteady-State Mass Balance	39
2.2.1	Up-Going Curve	40
2.2.2	Down-Going Curve	43
2.2.3	Working with Real Data	45
2.3	Chemical Kinetics	49
2.3.1	First-Order Reactions	50
2.3.2	Second-Order Reactions	50
2.3.3	Michaelis–Menten Kinetics	52
2.4	Problem Set	56

3	Atmospheric Chemistry	63
3.1	Atmospheric Structure	63
3.2	Light and Photochemistry	65
3.3	Atmospheric Oxidants	69
3.4	Kinetics of Atmospheric Reactions	70
3.4.1	Pseudo-Steady-State Example	70
3.4.2	Arrhenius Equation	71
3.5	Stratospheric Ozone	72
3.5.1	Formation and Loss Mechanisms	72
3.5.2	Chapman Reaction Kinetics	77
3.6	Smog	80
3.7	Problem Set	84
4	Climate Change	93
4.1	Historical Perspective	93
4.2	Blackbody Radiation and Earth's Temperature	94
4.3	Absorption of Infrared Radiation	97
4.4	Greenhouse Effect	98
4.5	Earth's Radiative Balance	99
4.5.1	Greenhouse Gases	99
4.5.2	Albedo	101
4.5.3	Solar Constant	101
4.5.4	Combined Effects	101
4.6	Aerosols and Clouds	101
4.7	Radiative Forcing	103
4.8	Global Warming Potentials	104
4.9	Concluding Remarks	106
4.10	Problem Set	108
5	Carbon Dioxide Equilibria	113
5.1	pH and Equilibrium Constants	113
5.2	Pure Rain	116
5.3	Polluted Rain	119
5.4	Additional Acid Rain Chemistry and Implications	123
5.5	Surface Water	125
5.6	Ocean Acidification	128
5.7	Problem Set	132
6	Fates of Organic Compounds	139
6.1	Molecular Interactions	140
6.1.1	Electronegativity	140

6.1.2	Molecular Dipoles and Quadrupoles	141
6.1.3	Types of Weak Interactions	142
6.2	Vapor Pressure	145
6.3	Aqueous Solubility	149
6.3.1	Solubility of Pure Liquids and Solids	149
6.3.2	Solubility of Gases	154
6.4	Partitioning into Organic Phases	158
6.5	Partitioning into Biota	160
6.5.1	Bioconcentration	161
6.5.2	Bioaccumulation	161
6.5.3	Biomagnification	162
6.6	Adsorption	162
6.7	Water–Air Transfer	165
6.8	Reactive Fates of Organic Pollutants	168
6.9	Putting It All Together: Partitioning and Persistence	169
6.10	Problem Set	172
7	Toxic Stuff: Mercury, Lead, Pesticides, Polychlorinated Biphenyls, Dioxins, and Flame Retardants	181
7.1	Mercury	181
7.2	Lead	183
7.3	Pesticides	188
7.3.1	Pesticide History	189
7.3.2	Legacy Pesticides	190
7.3.3	Current Use Herbicides	194
7.3.4	Current Use Insecticides	198
7.3.5	Current Use Fumigants	201
7.3.6	Current Use Fungicides	203
7.4	Polychlorinated Biphenyls (PCBs)	203
7.4.1	PCB Nomenclature	204
7.4.2	PCB Production and Use	205
7.4.3	PCBs in the Hudson River	206
7.4.4	PCBs in Bloomington, Indiana	209
7.4.5	Yusho and Yu-Cheng Diseases	211
7.4.6	PCB Conclusions	213
7.5	Polychlorinated Dibenzo- <i>p</i> -dioxins and Dibenzofurans	214
7.5.1	Dioxin Nomenclature	214
7.5.2	Chick Edema Disease	215
7.5.3	Agent Orange	216
7.5.4	Times Beach, Missouri	218
7.5.5	Seveso, Italy	219

7.5.6	Combustion Sources of Dioxins	222
7.5.7	US Dioxin Reassessment and Conclusions	224
7.6	Brominated and Other Flame Retardants	225
7.6.1	Polybrominated Biphenyls	226
7.6.2	Polybrominated Diphenyl Ethers	228
7.6.3	Other Flame Retardants	229
7.7	Lessons Learned	231
A	Primer on Organic Structures and Names	233
B	Periodic Table of the Elements	243
C	Useful Physical and Chemical Constants	245
D	Answers to Problem Sets	247
	Chapter 1	247
	Chapter 2	248
	Chapter 3	251
	Chapter 4	252
	Chapter 5	254
	Chapter 6	257
	Index	259
