About the Authors	<i>xiii</i>
Foreword by Dr. Sanak Mishra	<i>xvii</i>
Foreword by Prof. Koji Kato	<i>xviii</i>
Preface	<i>xix</i>

Section I Fundamentals of Ceramics: Processing and Properties 1

1	Introduction: Ceramics and Tribology	3
1.1	Introduction	3
1.2	Classification of Engineering Materials	6
1.3	Engineering Ceramics	8
1.4	Structural Ceramics: Typical Properties and Tribological Applications	9
1.5	Structure of the Book	14
1.6	Closure	17
	References	17
2	Processing of Bulk Ceramics and Coatings	21
2.1	Introduction	21
2.2	Conventional Processing of Ceramics	21
2.2.1	Sintering Mechanism	22
2.2.2	Conventional Processing of Ceramics	24
2.2.2.1	Powder Processing and Compaction	24
2.2.2.2	Pressureless Sintering	27
2.2.3	Advanced Processing of Ceramics	28
2.2.3.1	Hot Pressing	28
2.2.3.2	Microwave Sintering	28

2.2.3.3	Spark Plasma Sintering	29
2.3	Thermal Spray-Based Coating Deposition	30
2.3.1	Basics of Thermal Spray Deposition	33
2.3.1.1	Plasma Spray Deposition	33
2.3.1.2	Flame Spray Deposition	34
2.3.1.3	Wire Arc Spray Deposition	35
2.3.1.4	High-Velocity Oxy-Fuel Spray Deposition	36
2.3.1.5	Detonation Spray Coating	36
2.3.2	Bond Strength of Thermal Spray Coatings	39
2.3.2.1	Bond Mechanism	39
2.3.2.2	Test Methods	40
2.3.3	Coating Structure	42
2.3.3.1	Particle and Substrate Material Properties	42
2.3.3.2	Particle Temperature and Velocity	42
2.3.4	Case Study: WC-Co Coatings	42
2.4	Closure	49
	References	49
3	Conventional and Advanced Machining Processes	53
3.1	Introduction	53
3.2	Conventional Machining	54
3.3	Advanced Machining Processes	57
3.3.1	Electro-Discharge Machining	57
3.3.1.1	Working Principle	59
3.3.1.2	EDM Process Variables	61
3.3.1.3	EDM Parameters	62
3.3.1.4	Surface Analysis	63
3.3.1.5	EDM of Ceramic-Based Composites	64
3.4	Closure	66
	References	66
4	Mechanical Properties of Ceramics	71
4.1	Defining Stress and Strain	71
4.2	Comparison of Tensile Behavior	78
4.3	Brittle Fracture of Ceramics	80
4.4	Cracking in Brittle Materials	84
4.5	Experimental Assessment of Mechanical Properties	87
4.5.1	Hardness	87
4.5.2	Compressive Strength	88
4.5.3	Flexural Strength	89
4.5.4	Tensile Strength	91
4.5.5	Elastic Modulus	91

- 4.5.6 Fracture Toughness 95
- 4.5.6.1 Notched Beam Test 96
- 4.5.6.2 Indentation Microfracture Method 97
- 4.5.7 Practical Guidelines for Reliable Measurements 98
- 4.6 Closure 99
- References 100

Section II Fundamentals of Tribology 103

- 5 Contact Surface Characteristics 105**
 - 5.1 Nature and Roughness of Contact Surfaces 105
 - 5.2 Surface Roughness Measurement 108
 - 5.2.1 Stylus Method 108
 - 5.2.2 Atomic Force Microscopy 109
 - 5.2.3 Optical Interferometry 110
 - 5.2.4 Laser Surface Profilometry 111
 - 5.2.5 Scanning Electron Microscopy 111
 - 5.3 Bearing Area Curve and Cumulative Distribution Function 111
 - 5.4 Nominal Versus Real Contact Area 112
 - 5.5 Hertzian Contact Stress 115
 - 5.6 Closure 116
 - References 118

- 6 Friction and Interface Temperature 119**
 - 6.1 Theory of Friction 119
 - 6.1.1 Friction Laws and Mechanisms 120
 - 6.2 Types of Friction 125
 - 6.2.1 Static and Kinetic Friction 125
 - 6.2.2 Slip-Stick Friction 126
 - 6.2.3 Rolling Friction 126
 - 6.3 Friction of Engineering Material Classes 127
 - 6.4 Frictional Heating and Temperature at the Interface 139
 - 6.4.1 Heating Due to Friction 140
 - 6.4.2 Understanding the Temperature in the Contact: The Bulk and Flash Temperatures 141
 - 6.5 Analytical Models Used to Predict the Temperatures in the Contact 145
 - 6.6 Implications of the Important Contact Temperature Models 146
 - 6.6.1 Archard Model 147

- 6.6.2 Kong–Ashby Model 148
- 6.7 Closure 149
- References 150

7 Wear of Ceramics and Lubrication 155

- 7.1 Introduction 155
- 7.2 Testing Methods and Quantification of Wear of Materials 157
- 7.3 Classification of Wear Mechanisms 158
 - 7.3.1 Tribomechanical Wear 159
 - 7.3.1.1 Adhesive Wear 159
 - 7.3.1.2 Abrasive Wear 161
 - 7.3.1.3 Fatigue Wear 164
 - 7.3.1.4 Fretting Wear 165
 - 7.3.1.5 Erosive Wear 167
 - 7.3.2 Tribochemical Wear 171
 - 7.3.2.1 Oxidative Wear 174
- 7.4 Lubrication 175
 - 7.4.1 Regimes of Lubrication and the Stribeck Curve 175
 - 7.4.2 Influence of Lubricant Composition, Contact Pressure, and Temperature on Lubrication 178
- 7.5 Closure 181
- References 182

Section III Case Study: Sliding Wear of Ceramics 185

8 Sliding Wear of SiC Ceramics 187

- 8.1 Introduction 187
- 8.2 Materials and Experiments 188
- 8.3 Friction and Wear Behavior of SiC Ceramics Sintered with a Small Amount of Ytria Additive 189
- 8.4 Influence of Mechanical Properties on Sliding Wear of SiC Ceramics 191
- 8.5 Wear Mechanisms 191
- 8.6 Closure 192
- References 193

9 Sliding Wear of SiC-WC Composites 195

- 9.1 Introduction 195
- 9.2 Microstructure and Mechanical Properties of SiC-WC Composites 196
- 9.3 Influence of Mating Material and WC Content on Tribological Properties 197

9.3.1	Friction and Wear Behavior	197
9.3.2	Mechanisms of Material Removal	198
9.3.3	Friction and Wear of SiC-WC Composites: System-Dependent Properties	202
9.3.4	Wear Mechanisms	202
9.4	Reciprocated Sliding Wear Behavior of SiC-WC Composites	203
9.4.1	Frictional and Wear Behavior	205
9.4.2	Critical Analysis of Wear Mechanisms	206
9.4.2.1	Wear Debris Analysis	206
9.4.2.2	Effect of Temperature	208
9.4.2.3	Effect of Test Configuration on Wear Behavior	208
9.5	Closure	209
	References	210
10	Sliding Wear of Zirconia-Toughened Alumina	215
10.1	Introduction	215
10.2	Mechanical Properties of ZTA	216
10.3	Sliding Wear Properties of ZTA	219
10.4	Correlation with Theoretical Analysis	222
10.5	Closure	224
	References	225
11	Abrasive Wear of Detonation Sprayed WC-12Co Coatings	227
11.1	Introduction	227
11.2	Coatings and Abrasive Wear	228
11.3	Abrasive Wear Results	230
11.4	Surface and Subsurface Damage Mechanisms	231
11.5	Closure	233
	References	234
12	Solid-Lubricant Interaction and Friction at Lubricated Contacts	237
12.1	Introduction	237
12.2	Materials and Sliding Wear Experiments	239
12.3	Wetting and Spreading Properties	240
12.4	Surface Energies of Different Classes of Materials	242
12.5	Wetting Evaluation of Engineering Surfaces	242
12.6	Effect of Wetting on EHL Friction	246
12.7	Correlation Between Spreading Parameter and Friction	247
12.8	Closure	249
	References	250

Section IV Case Study: Erosive Wear of Ceramics 253

- 13 Erosive Wear of SiC-WC Composites 255**
 - 13.1 Introduction 255
 - 13.2 Materials and Erosion Tests 256
 - 13.3 Influence of Type of Erodent on Erosive Wear Behavior 256
 - 13.4 Influence of Impingement Angle and WC Content on Erosive Wear Behavior 258
 - 13.5 Correlating Erosive Wear Behavior with Microstructural Characteristics 259
 - 13.6 Correlating Erosive Wear Behavior with Mechanical Properties 259
 - 13.7 Erosive Wear Behavior at High Temperature 260
 - 13.8 Closure 262
 - References 263

- 14 Thermo-Erosive Behavior of ZrB₂-SiC Composites 265**
 - 14.1 Introduction 265
 - 14.2 High-Temperature Erosion Tests and Computational Modeling 267
 - 14.3 Computational Modeling of Thermo-Erosive Behavior 269
 - 14.4 High-Temperature Erosion Test Results 270
 - 14.5 Transient Thermal Studies Using FE Analysis 271
 - 14.6 Coupled Thermo-Structural Analysis 271
 - 14.7 Thermo-Erosive Behavior 273
 - 14.8 Closure 274
 - References 275

- 15 Erosive Wear of WC-Co Coating 279**
 - 15.1 Introduction 279
 - 15.2 Materials and Erosion Experiments 280
 - 15.3 Erosive Wear Mechanisms (Surface Damage) 282
 - 15.4 Erosive Wear Mechanisms (Subsurface Damage) 287
 - 15.5 Correlating Wear Mechanism with Erodent and Coating Properties 290
 - 15.6 Closure 293
 - References 293

Section V Case Study: Machining-Induced Wear of Cermets 295

- 16 Crater Wear of TiCN Cermets in Conventional Machining 297**
 - 16.1 Introduction 297

16.2	TiCN Cermets and Machining Conditions	298
16.3	Wear Mechanisms of TiCN-WC-Ni Cermets	299
16.4	Machining with TiCN-WC-TaC-Ni-Co Cermet Tools	300
16.5	Correlating Cermet Composition, Microstructure, and Wear During Machining	304
16.6	Closure	306
	References	306
17	Wear of TiCN-Based Cermets in Electrodischarge Machining	309
17.1	Introduction	309
17.2	Materials and EDM Tests	310
17.3	Wear of TiCN-Cermets During EDM	310
17.4	Mechanisms of Material Removal During EDM	311
17.5	Closure	313
	References	313
	Section VI Future Scope	317
18	Perspective	319
18.1	Innovation Cycle for Wear-Resistant Materials	319
18.2	<i>In Situ</i> Diagnosis of Tribological Interaction	321
18.3	High-Temperature Wear Testing	321
18.4	Modeling and Simulation in Tribology	322
18.5	Tribomaterialomics – A New Concept	323
18.6	Education and Mentoring of Next-Generation Researchers	327
	References	328
	Appendix: Appraisal	329
A.I	Multiple Choice Questions	329
A.II	Select the Appropriate Combination	350
A.III	Fill in the Blanks with the Most Appropriate Response	352
A.IV	Mention the Appropriate Material/Equipment in the Blank	353
A.V	Identify Whether the Following Statements are True/False	354
A.VI	Short Review Questions and Descriptive Questions	354
A.VII	Analytical Questions	363
A.VIII	Model Answers	366
	Index	369
