

Fernando Sansò · Federica Migliaccio

Quantum Measurement of Gravity for Geodesists and Geophysicists

 Springer

Contents

1	Recalls of Classical Mechanics	1
1.1	Introduction	1
1.2	From Newton to Lagrange	1
1.3	From Lagrange to Hamilton	4
1.4	Poisson Parentheses	6
1.5	Canonical Transformations. Conjugate Variables	8
1.6	Dynamic Systems with Generalized Potentials	11
	References	14
2	Recalls of the Classical Theory of the Electromagnetic Field	15
2.1	Introduction	15
2.2	Maxwell Equations and Lorentz Equation	15
2.3	Electromagnetic Waves in Empty Space	17
2.4	Wave Packets	22
2.5	Electromagnetic Potentials, Lorentz Gauge	24
2.6	Energy Conservation	31
2.7	Momentum Conservation	34
	References	39
3	The Crisis of Classical Physics and the Dawn of Quantum	
	Physics	41
3.1	Introduction	41
3.2	The Untenable Planetary Model of the Atom	42
3.3	The Birth of Quanta	45
3.4	The Electromagnetic Radiation Behaves Like a Flow of Particles	46
3.5	The Quantized Atom of Niels Bohr	49
3.6	Overcoming the Dualism Waves–Particles. The “Waves of Matter” of Louis de Broglie	51

3.7	The Heisenberg Indetermination Principle	54
	References	57
4	The Principles of Quantum Mechanics	59
4.1	Introduction	59
4.2	A Theorem on Fourier Transform	60
4.3	Some Facts About Hermitian Operators in Hilbert Spaces	65
4.4	A More Precise Formulation of Seven Principles of Quantum Mechanics	71
4.5	The Time Evolution of a Quantum State: Schrödinger Equation	77
4.6	Stationary States; Constants of Motion	80
	References	83
5	First Applications of Quantum Theory	85
5.1	Introduction	85
5.2	The Free Particle	85
5.3	The Hydrogen Atom as an Example	87
5.4	The Quantum Theory of Angular Momentum	91
5.5	First-Order Spectral Analysis of Static Perturbations of the Hamiltonian	93
5.6	The Zeeman Effect, the Spin, and the Atomic Spectrum	96
5.7	Time-Dependent Perturbations of the Hamiltonian	101
	References	104
6	The Quantum Measurement of Gravity	105
6.1	Introduction	105
6.2	The Dipole Approximation of the Optical Radiation—Atom Interaction	106
6.3	Rabi Equation	111
6.4	Adding Momentum Exchange to the Atom–Photon Interaction	117
6.5	The Atom Interferometry and the Measurement of g	123
6.6	Complements and Improvements	126
6.7	Results and Perspectives	129
	References	132
