## Contents

3.2.4 Improved Possibilistic c-Means (IPCM) .............. 27  
3.2.4.1 Advantages of IPCM over PCM ................. 27  
3.2.4.2 Mathematical Formulation of IPCM ............ 27  
3.2.4.3 Characteristic Features of IPCM ............... 28  
3.2.5 Modified Possibilistic c-Means (MPCM) .......... 29  
3.2.5.1 Mathematical Formulation of MPCM .......... 29  
3.3 Summary .................................................. 30  
Bibliography ............................................... 30  

### Chapter 4 Learning Based Classifiers ........................................ 33 
4.1 Introduction ............................................... 33  
4.2 Variants of Artificial Neural Network (ANN) .......... 33  
4.2.1 Back-Propagation ...................................... 38  
4.2.2 Weight Update ......................................... 39  
4.3 Convolutional Neural Network (CNN) .................. 41  
4.3.1 Convolutional Neural Networks Image Classification .................................................. 41  
4.3.2 Supervised Machine Learning ......................... 43  
4.4 Recurrent Neural Network (RNN) ......................... 46  
4.5 Hybrid Learning Network (HLN) ......................... 47  
4.5.1 Training Issues – Remote Sensing Data Domain .... 48  
4.6 Deep Learning Concepts .................................. 48  
4.6.1 Challenges in Learning Algorithms .................. 49  
4.7 In-house Tool for Study of Learning Algorithms .... 50  
4.8 Summary .................................................. 53  
Bibliography ............................................... 54  

### Chapter 5 Hybrid Fuzzy Classifiers ........................................ 57 
5.1 Introduction ............................................... 57  
5.2 Hybrid Approach ........................................... 57  
5.2.1 Entropy Based Hybrid Soft Classifiers .............. 59  
5.2.2 Fuzzy c-Means with Entropy (FCME) ................. 59  
5.2.3 Noise Clustering with Entropy (NCE) Classifier .... 60  
5.3 Similarity/Dissimilarity Measures in Fuzzy Classifiers ..... 62  
5.3.1 Similarity Measures ................................... 63  
5.3.1.1 Cosine Similarity Measure ......................... 63  
5.3.1.2 Correlation Similarity Measure ................. 63  
5.3.2 Dissimilarity Measures ................................ 64  
5.3.2.1 Euclidean Distance ............................... 65  
5.3.2.2 Manhattan Distance ............................... 65  
5.3.2.3 Chessboard ........................................ 66  
5.3.2.4 Bray Curtis ......................................... 66  
5.3.2.5 Canberra ........................................... 66  
5.3.2.6 Mean Absolute Difference ....................... 67  
5.3.2.7 Median Absolute Difference ...................... 67
5.3.2.8 Normalized Squared Euclidean ................. 67
5.3.2.9 Composite Measure: Combining Similarity and Dissimilarity Measures ..... 68
5.4 Spectral Characterization Measures .................................. 68
5.4.1 Spectral Information Divergence (SID) ............... 68
5.4.2 Spectral Angle Mapper (SAM) .......................... 69
5.4.3 Spectral Correlation Angle (SCA) ....................... 69
5.5 Hybridization of Spectral Measures .................................. 70
5.5.1 SID-SAM Hybridization .................................. 70
5.5.2 SID-SCA Hybridization .................................. 70
5.6 Kernels Concept in Fuzzy Classifiers ......................... 71
5.6.1 Local Kernels ........................................... 72
5.6.2 Global Kernels .......................................... 73
5.6.3 Spectral Kernels .......................................... 73
5.6.4 Hybrid Kernel Approach .................................. 74
5.7 Theory behind Markov Random Field (MRF) ................. 74
5.7.1 MAP-MRF Framework .................................. 75
5.7.2 Contextual Information Using MRF ....................... 76
5.7.3 Contextual Fuzzy Classifier ............................ 77
5.7.4 Smoothness Prior ....................................... 77
5.7.5 Discontinuity Adaptive (DA) Priors ...................... 78
5.7.5.1 Standard Regularization .................................. 79
5.7.5.2 DA MRF Model ....................................... 79
5.7.5.3 How DA Priors Work .................................. 80
5.8 Convolution Based Local Information in Fuzzy Classifiers ... 81
5.8.1 Fuzzy c-Means with Constraints (FCM-S) Algorithm .................................. 82
5.8.2 Possibilistic c-Means with Constraints (PCM-S) Algorithm .................................. 82
5.8.3 Fuzzy Local Information c-Means (FLICM) Algorithm .................................. 83
5.8.4 Possibilistic Local Information c-Means (PLICM) Algorithm .................................. 84
5.8.5 Adaptive Fuzzy Logic Local Information c-Means (ADFLICM) Algorithm .................................. 86
5.8.6 Adaptive Possibilistic Local Information c-Means (ADPLICM) Algorithm .................................. 87
5.8.7 Modified Possibilistic c-Means with Constraints (MPCM-S) Algorithm .................................. 88
5.8.8 Modified Possibilistic Local Information c-Means (MPLICM) Algorithm .................................. 89
5.8.9 Adaptive Modified Possibilistic Local Information c-Means (ADMPLICM) Algorithm .................................. 89
5.9 Summary .................................................. 90
Bibliography ................................................ 90
Chapter 6  Fuzzy Classifiers for Temporal Data Processing .................................. 95
6.1  Introduction ................................................................................................. 95
6.2  Temporal Indices Approach ........................................................................ 96
6.3  Feature Selection Methods .......................................................................... 98
6.4  Some Case Studies for Temporal Data Analysis ...................................... 99
6.5  Single Class Extraction ............................................................................... 103
  6.5.1  Fuzzy Set Theory Based Classifiers for a Single Class Extraction .......... 103
6.6  Concept for Mono-/Bi-sensor Remote Sensing Data Processing ................ 108
6.7  Summary ................................................................................................... 108
Bibliography ..................................................................................................... 108

Chapter 7  Assessment of Accuracy for Soft Classification ............................... 113
7.1  Introduction ............................................................................................... 113
7.2  Generation of Testing Data ......................................................................... 115
7.3  Methods for Assessment of Accuracy of Soft Classified Outputs .............. 115
  7.3.1  Fuzzy Error Matrix and Other Associated Operators ......................... 116
    7.3.1.1  Fuzzy Error Matrix ..................................................................... 116
    7.3.1.2  Composite Operator Based FERM .............................................. 118
    7.3.1.3  Sub-Pixel Confusion-Uncertainty Matrix (SCM) ......................... 120
  7.3.2  Measure of Uncertainty: Entropy ......................................................... 123
  7.3.3  Correlation Coefficient ......................................................................... 124
  7.3.4  Root Mean Square Error ...................................................................... 124
  7.3.5  Receiver Operating Characteristic (ROC) .......................................... 125
  7.3.6  Method for Edge Preservation ............................................................ 126
7.4  Summary ................................................................................................... 127
Bibliography ..................................................................................................... 127

Appendix: A1, SMIC: Sub-Pixel Multi-Spectral Image Classifier Package .......... 131
Appendix: A2, Case Studies from SMIC Package .............................................. 141
Index ................................................................................................................... 185
