### Feature Article

1. **Nanoscale coordination polymers for medicine and sensors** 3  
   Rubén Solórzano, Salvio Suárez-García, Fernando Novio, Julia Lorenzo, Ramon Alibés, Félix Busqué, and Daniel Ruiz-Molina  
   1. Introduction 4  
   2. Nanoscale coordination polymers for drug delivery 6  
   3. Nanoscale coordination polymers for chemical sensing 17  
   4. Perspectives 26  
   Acknowledgments 27  
   References 27  

2. **Nanoscale coordination polymers: Preparation, function and application** 33  
   Ali Morsali and Lida Hashemi  
   1. Introduction to coordination polymers 34  
   2. Introduction to nano coordination polymers (NCPs) 37  
   3. Effective factors in synthetic of nano coordination polymers 47  
   4. Application of nano coordination polymers 56  
   5. Conclusions and future perspectives 68  
   Acknowledgments 68  
   References 69  

3. **The role of defects in the properties of functional coordination polymers** 73  
   Celia Castillo-Blas, Carmen Montoro, Ana E. Platero-Prats, Pablo Ares, Pilar Amo-Ochoa, Javier Conesa, and Félix Zamora  
   1. Introduction 74  
   2. Low dimensional nanoscale coordination polymers 78  
   3. Tailoring the catalytic, adsorptive and conductive properties of metal-organic frameworks at the nanoscale 94
4. Conclusions and future perspectives
Acknowledgments
References

4. Selected polyazole based coordination polymers displaying functional properties
Yann Garcia

1. Introduction
2. Selected coordination networks for metal capture
3. Spin crossover materials
4. Crystal network design
5. Sensing toxic industrial chemicals
6. Nanomedicine
7. Conclusions and future developments
Acknowledgments
References

5. Coordination compounds with siloxane/silane-containing ligands capable of self-assembly at nano/micro scale in solid state and in solution
Mirela-Fernanda Zaltariov and Maria Cazacu

1. Coordination compounds in the “nano” context
2. Coordination compounds with siloxane/silane-containing ligands
3. Nano-sized coordination compounds of Schiff bases with siloxane spacer or silane tails
4. Metal complexes with siloxane-spaced or -supported polycarboxylate ligands
5. Conclusions and future perspectives
Acknowledgment
References

6. Nanoscale coordination compounds
Younes Hanifehpour, Babak Mirtamizdoust, and Sang Woo Joo

1. Introduction
2. General comment
3. Conclusions and future perspectives
Acknowledgment
References
