<i>List of Symbols</i>	xv
1 Introduction	1
1.1 Geophysical Investigation of the Subsurface	1
1.2 Importance of Electrical Properties	3
1.3 Historical Development of Electrical Geophysics	4
1.3.1 DC Resistivity	4
1.3.2 Induced Polarization	11
1.4 Recent Methodological Developments	14
1.5 Outline of the Book	15
2 Electrical Properties of the Near-Surface Earth	18
2.1 Introduction	18
2.2 DC Resistivity	20
2.2.1 Electrical Conduction	22
2.2.2 Resistivity/Conductivity Definitions	22
2.2.3 Conduction Processes in Earth Materials	24
2.2.3.1 Ionic Conduction in a Fluid	25
2.2.3.2 The Electric Double Layer (EDL)	27
2.2.3.3 Electron Conduction	29
2.2.4 Conduction in a Porous Medium	29
2.2.4.1 Electrolytic Conduction and Archie's Laws	30
2.2.4.2 Surface Conduction and the Parallel Conduction Paths Model	36
2.2.4.3 Conduction in Frozen Soils	43
2.2.4.4 Other Models for Predicting the Conductivity of Soils and Rocks	44
2.3 Induced Polarization	50
2.3.1 Complex Resistivity/Conductivity Definitions	53

2.3.2	Polarization Mechanisms	56
2.3.3	Frequency-Independent IP Model in the Absence of Electron Conducting Particles	58
2.3.4	Frequency Dependence of the Complex Conductivity	65
2.3.5	Mechanistic Models for the Frequency-Dependent Complex Conductivity in the Absence of Electron Conducting Particles	72
2.3.5.1	Grain- and Pore-Size Based Models of the Surface Conductivity	73
2.3.5.2	Pore-Throat-Based Models	78
2.3.6	Estimation of Hydraulic Properties from Electrical Properties in the Absence of Electron Conducting Particles	80
2.3.7	Polarization of Soils and Rocks Containing Electron Conducting Particles	86
2.3.8	Electrical Properties of Contaminated Soils and Rocks	96
2.3.9	Non-linear IP Effects	97
2.4	Closing Remarks	98
3	Instrumentation and Laboratory Measurements	100
3.1	Introduction	100
3.2	Resistivity Measurements	103
3.2.1	Resistance, Resistivity and the Geometric Factor	103
3.2.2	Laboratory Measurements	103
3.2.2.1	Measurement Cells and the Four-Electrode Measurement	103
3.2.2.2	Types of Sample Holders	106
3.2.2.3	Determining the Geometric Factor	107
3.2.2.4	Laboratory Instrumentation	109
3.2.2.5	Current Sources	110
3.2.2.6	Potential Recordings	110
3.2.2.7	Laboratory Electrodes	111
3.2.3	Field Instruments	112
3.2.3.1	Field Transmitters	113
3.2.3.2	Field Receivers	114
3.2.3.3	Multiple Transmitter Instruments	115
3.2.4	Monitoring Systems	115
3.2.5	Surface Electrode Equipment	119
3.2.5.1	Surface Cables	119
3.2.5.2	Smart Electrode Take-Outs	119
3.2.5.3	Surface Electrodes	120
3.2.6	Borehole Electrode Arrays	124
3.3	Induced Polarization Measurements	126
3.3.1	Laboratory Measurements	127

3.3.1.1	Sample Holders	127
3.3.1.2	Laboratory Instruments	131
3.3.1.3	Electrodes for Laboratory Measurements	134
3.3.1.4	Two-Electrode Dielectric Spectroscopy Measurements	135
3.3.2	Field Instruments	136
3.3.2.1	Time Domain Systems	136
3.3.2.2	Estimating Relaxation Model Parameters from Time Domain Measurements	139
3.3.2.3	Equivalent Frequency Domain Information from Full Time Domain Waveforms	141
3.3.2.4	Frequency Domain Systems	141
3.3.2.5	Electrodes for Field Measurements	144
3.3.2.6	Electrode Cables	146
3.3.2.7	Distributed Transmitter and Receiver Systems	146
3.3.3	Relationships between Instrument Measurements	148
3.3.4	Instrumentation for Imaging Tanks, Cores and Other Vessels	149
3.4	Closing Remarks	151
4	Field-Scale Data Acquisition	154
4.1	Introduction	154
4.2	DC Resistivity	154
4.2.1	The Resistivity Quadrupole and Apparent Resistivity of Specific Resistivity Structures	154
4.2.1.1	Electrode Array Geometries	158
4.2.1.2	Apparent Resistivity of Laterally Variable Media	162
4.2.1.3	Apparent Resistivity of Layered Media	163
4.2.1.4	Apparent Resistivity of Some Other Resistivity Structures	166
4.2.2	Measurements in the Field	169
4.2.2.1	Measurement Errors	169
4.2.2.2	Profiling	175
4.2.2.3	Anisotropy and Azimuthal Surveys	177
4.2.2.4	Vertical Sounding for a 1D Layered Media	178
4.2.2.5	2D Imaging	180
4.2.2.6	3D Imaging	185
4.2.2.7	Borehole-Based Measurements	189
4.2.2.8	Small-Scale Imaging: Tanks and Columns	196
4.2.2.9	Optimal Measurement Schemes	198
4.2.2.10	Time-Lapse Data Acquisition Considerations	199
4.2.2.11	Current Source Methods	201
4.3	Induced Polarization	203
4.3.1	Characteristics of a Polarizable Subsurface	204
4.3.2	Measurement Errors	206

4.3.3	Electrode Geometries	208
4.3.4	Borehole Measurements	211
4.3.5	Small-Scale Imaging	211
4.4	Closing Remarks	212
5	Forward and Inverse Modelling	213
5.1	Introduction	213
5.2	DC Resistivity	215
5.2.1	Forward Modelling	215
5.2.1.1	1D Modelling	215
5.2.1.2	2D and 3D Modelling	216
5.2.1.3	Anisotropy	223
5.2.2	Inverse Modelling	223
5.2.2.1	General Concepts	223
5.2.2.2	Damping and Regularisation	225
5.2.2.3	Computation of the Sensitivity Matrix	230
5.2.2.4	Inverse Models for Vertical Soundings	231
5.2.2.5	Generalized 2D Inverse Modelling	232
5.2.2.6	3D Inverse Modelling	236
5.2.2.7	Accounting for Electrical Anisotropy	241
5.2.2.8	Enhancing the Regularisation	241
5.2.2.9	Post-Processing of Inverse Models	243
5.2.2.10	Time-Lapse Inversion	244
5.2.3	The Impact of Measurement and Model Errors	247
5.2.3.1	Robust Inversion	249
5.2.4	Inverse Model Appraisal	250
5.2.4.1	General Concepts	250
5.2.4.2	Model Resolution Matrix Approaches	250
5.2.4.3	Depth and Volume of Investigation	252
5.2.4.4	Model Covariance Matrix and Parameter Uncertainty	253
5.2.5	Alternative Inverse Modelling Approaches	255
5.2.5.1	Bayesian Methods	255
5.2.5.2	Other Global Optimization Methods	258
5.2.5.3	Joint and Coupled Inversion	260
5.2.6	Current Source Modelling and Inversion	261
5.3	Induced Polarization	263
5.3.1	General Comments	263
5.3.2	Forward Modelling in the Time Domain	263
5.3.3	Forward Modelling in the Frequency Domain	264
5.3.3.1	Modelling Electromagnetic Coupling	264
5.3.4	Inverse Modelling in the Time Domain	265
5.3.5	Inverse Modelling in the Frequency Domain	266

5.3.6	Time-Lapse Inverse Modelling	269
5.3.7	Inversion of Frequency-Dependent Properties	270
5.3.7.1	Relaxation Modelling	270
5.3.7.2	Imaging Relaxation Properties	272
5.3.8	Inverse Model Appraisal	273
5.4	Closing Remarks	273
6	Case Studies	275
6.1	Resistivity Case Studies	275
6.1.1	Introduction	275
6.1.2	Archaeology: Investigation of Roman Fort Remains in Lancaster	275
6.1.3	Hydrogeology: Imaging at the Groundwater–Surface Water Interface	277
6.1.4	Hydrogeology: Time-Lapse 3D Imaging of Solute Migration in the Unsaturated Zone	281
6.1.5	Soil Science: Imaging Solute Transport in Soil Cores	284
6.1.6	Agriculture: Imaging Crop Water Uptake	286
6.1.7	Geotechnical Engineering: Time-Lapse 3D Imaging of Moisture-Induced Landslides	289
6.1.8	Emerging Applications: Imaging Deep CO <sub>2</sub> Injection	292
6.1.9	Emerging Applications: Imaging Permafrost Distribution and Properties	294
6.2	IP Case Studies	297
6.2.1	Introduction	297
6.2.2	Hydrogeology: Characterization of a Hydrogeological Framework	298
6.2.3	Hydrogeology: Imaging Hydrostratigraphy	301
6.2.4	Hydrogeology: Imaging Permeability Distributions in Unconsolidated Sediments	303
6.2.5	Hydrogeology: Relationships between Spectral Induced Polarization and Permeability	306
6.2.6	Engineering: Imaging Engineered Permeable Reactive Barriers for Remediating Groundwater	308
6.2.7	Engineering: Imaging of Soil Strengthening	312
6.2.8	Emerging Applications: Tracking Biomineralization Processes during Remediation	314
6.2.9	Emerging Applications: Characterization and Monitoring of Trees	318
7	Future Developments	321
7.1	Developments in Petrophysical Relationships	322
7.2	Future Instrument Development Needs	324
7.3	Future Modelling Development Needs	325
7.4	Closing Remarks	327

Appendix A: Modelling Tools	328
A.1 Available Modelling Tools	328
A.2 R Family of Codes	328
A.3 <i>ResIPy</i>	331
<i>References</i>	335
<i>Index</i>	385
