

ERGEBNISSE AUS DER LASERTECHNIK

Chen Hong

Laser Additive Manufacturing of Nickel
Superalloy Based Composites

Contents

1	Introduction	1
2	State of the art	5
3	Aim and scientific approach	13
4	Working plan	15
4.1	Powder preparation & characterization	15
4.2	Process development	15
4.3	Microstructure characterization	16
4.4	Material properties	16
5	Material	17
5.1	Inconel 625	17
5.2	Titanium carbide (TiC)	19
6	Experimental procedure	21
6.1	Powder preparation	21
6.2	Laser metal deposition	23
6.3	Microstructure analysis	27
6.4	Determination of mechanical properties	28
6.5	High temperature oxidation resistance	29
6.6	Wear tests	29
7	Influence of laser energy input per unit length (LEPUL) on microstructure	31
7.1	Determination of process parameters	31
7.2	Size and morphology of TiC particles	34
7.3	Phase constitution identification of the nPRMMC	36
7.4	Microstructure	40
7.5	Wear performance – COF, wear and worn surface morphology	43
8	Influence of content of reinforced particles on microstructure and mechanical properties	47
8.1	Process parameters	47
8.2	Single layers	47
8.3	Bulk volumes	48
8.3.1	Investigation of the microstructure using optical microscopy	49
8.3.2	EDX analysis of the microstructure	52

8.3.3	EBSD analysis of the microstructure	55
8.3.4	Hardness test	62
8.3.5	Tensile tests	62
8.3.6	Fracture surface study	66
8.3.7	Approach to quantifying the strengthening mechanisms	74
9	High temperature oxidation resistance	81
9.1	Investigation of oxidation performance	81
9.2	Characterization of microstructures and compositions	82
9.2.1	Microstructures of LMD-processed samples	82
9.2.2	Oxidation kinetics of LMD-processed parts	84
9.2.3	Phases and compositions identification and chemical thermodynamic analysis	87
9.2.4	Surface morphologies of oxidized samples	92
9.2.5	Oxidation mechanism of LMD-processed Inconel 625 based composite samples	95
10	Conclusion and Outlook	97
11	Annex	101
12	List of Abbreviations	109
13	List of Figures	111
14	Literatures	115
