

Fate of antibiotic resistant bacteria and antibiotic resistance genes in constructed wetlands

Dissertation

zur Erlangung des akademischen Grades
Doktoringenieurin (Dr.-Ing.)

von Frau Lic. Camila Ayelén Knecht
geb. am 16.10.1986 in Viedma, Argentinien

genehmigt durch die
Fakultät für Verfahrens- und Systemtechnik
der Otto-von-Guericke-Universität Magdeburg

Promotionskommission:

Prof. Dr.-Ing. Udo Reichl (Vorsitzer)
Prof. Dr.-Ing. habil. Heinz Köser (Gutacher)
Prof. Dr. Susanne Lackner (Gutacherin)
Prof. Dr. rer. nat. Thomas U. Berendonk (Gutacher)
Dr. rer. nat. Jochen A. Müller (Mitglied)

eingereicht am: 26.09.2019

Promotionskolloquium am: 10.06.2020

Acknowledgements.....	iv
Summary.....	vi
Zusammenfassung.....	viii
List of acronyms and abbreviations.....	xiii
List of tables.....	xv
List of figures.....	xvii
Glossary.....	xxi
1. Introduction.....	1
1.1. Antibiotic resistance as a major worldwide health threat.....	1
1.2. The role of horizontal gene transfer in antibiotic resistance.....	4
1.3. Antibiotic resistant bacteria and antibiotic resistance genes in the aquatic environment.....	8
1.4. Constructed wetlands as a near-natural approach to treat wastewater.....	9
1.5. Bacterial strategies to cope with oxidative stress can pose a risk for human health.....	13
1.6. Methodological approaches to study antibiotic resistance in the environment.....	15
1.6.1. <i>Antibiotic resistance: indicator bacteria and indicator genes</i>	17
1.6.2. <i>Tracking horizontal gene transfer</i>	18
2. Objectives.....	20
3. Materials and methods.....	22
3.1. Constructed wetlands at the ecotechnology in Langenreichenbach.....	22
3.2. Samples and standard wastewater parameters.....	24
3.3. Chemical analysis of antibiotics.....	25
3.4. Isolation of resistant bacteria.....	27
3.5. Characterization of SMX/TMP resistant isolates.....	27

3.6. Phylogenetic trees.....	30
3.7. Quantitative PCR analysis.....	30
3.8. Quantification of specific bacteria.....	32
3.9. Statistics.....	32
3.10. Set up of emulsion, paired isolation and concatenation PCR (epicPCR).....	32
4. Research output.....	36
4.1. Fate of antibiotic resistance in CW: technology evaluation.....	36
4.1.1. <i>Effect of aeration on the reduction of antibiotic resistance in an HSSF-CW</i>	38
4.1.1.1 Wastewater standard parameters and antibiotics concentration.....	38
4.1.1.2 <i>Reduction of antibiotic resistance genes and antibiotic resistant bacteria</i>	43
4.1.2. <i>Discussion</i>	53
4.1.3. <i>Conclusion</i>	57
4.2. Fate of antibiotic resistance in CW: internal behaviour.....	60
4.2.1. <i>Effect of physicochemical parameters on antibiotic resistance</i>	60
4.2.2. <i>The role of aeration in horizontal gene transfer of ARG</i>	62
4.2.2.1 <i>Standard wastewater parameters within H50p and HAp</i>	62
4.2.2.2 <i>Abundance of 16S rRNA gene and ARG</i>	65
4.2.2.3 <i>Quantification of specific bacteria</i>	88
4.2.2.4 <i>Emulsion paired isolation and concatenation PCR (epicPCR)</i>	92
4.2.3. <i>Discussion</i>	94
4.2.4. <i>Conclusion</i>	101
5. General discussion and outlook.....	103
