

Materials Today

Critical Materials

Alexander King

ELSEVIER

Contents

Acknowledgments	ix
Abbreviations and acronyms	xi
Preface	xv
1 What happened to the rare earths? Monopoly, price shock, and the idea of a critical material	1
The essentiality of the rare earths	2
Rare earth sources	7
Rare earth supply challenges—2005–15	9
After the price spike	13
Lessons learned: The price spike in hindsight	14
Coda: Every challenge is also an opportunity	15
References	17
2 This is not new. A short history of materials criticality and supply-chain challenges	19
Copper and the end of the Bronze Age (~1200 BCE)	19
The Venetian monopoly on glass	21
Cordite in World War I (1914–18)	23
Silk and nylon (the 1930s and 1940s)	24
World War II (1939–45)	24
Old lead (1978)	38
Cobalt (1978)	40
Niobium (1979)	41
Molybdenum (1980 and 2004)	42
Tantalum (1997, 2000, and 2008)	43
Photovoltaic silicon (mid-2000s)	44
Rhenium (2006–08)	47
Lessons learned	47
References	50
3 Assessing the risks	53
Defining critical materials	53
Assessments of materials criticality	54
Consistency and contrast	57
Variation of criticality over time	60
Regional perspectives on criticality	73

Indicators of criticality	75
What does criticality mean?	86
Consequences of criticality	87
Tipping points. What takes us from criticality to crisis?	87
Lessons learned	91
What will we need?	91
References	92
4 What changed after the rare earth crisis?	95
Impacts of the rare earth crisis	95
Conflicts and conflict resolution	97
The supply side	99
The demand side	101
Postcrisis rare earth prices and utilization	120
Lessons learned	121
References	121
5 Mitigating criticality, part I: Material substitution	123
The challenge of inventing materials on demand	123
Improving the forecast	124
Using existing materials	126
Increasing the speed of new material discovery and deployment	129
Lessons learned	159
References	159
6 Mitigating criticality, part II: Source diversification	161
How are mines developed?	162
Conventional mines	165
Unconventional sources	179
Coproduction	184
Progress since the rare earth crisis	198
Lessons learned	199
References	199
7 Mitigating criticality, part III: Improving the stewardship of existing supplies	205
Urban mines versus conventional mines	205
Regulatory versus economic drivers	206
Reducing manufacturing waste	208
In-process recycling	210
End-of-life recycling	212
Recycling as a response to criticality: Successes and failures	215
What fraction of current need can be met by recycling?	218
Emerging targets for recycling	221
Potentially viable recycling technologies	228

Lessons learned	233
References	234
8 Tactics and strategies for the future	235
What have we learned?	235
Time is the biggest challenge	236
Summary	252
Epilog: Criticality in the time of coronavirus	253
References	253
Index	255
