BERGAKADEMIE FREIBERG

Die Ressourcenuniversität. Seit 1765.

Experimental investigations on lignite char gasification kinetics using a pressurized drop tube reactor

**To the Faculty of mechanical engineering, process and energy engineering
of the Technische Universität Bergakademie Freiberg**

approved

THESIS

To attain the academic degree of

Doktor-Ingenieur

Dr.-Ing

submitted

by M.Sc. Victor Gonzalez

born the 5th of January of 1980 in San Cristobal, Venezuela

Reviewers:

Prof. Dr. B. Meyer, TUBAF

Prof. Dr. Mauß, BTU Cottbus-Senftenberg

Frau Prof. Dr. Kertzsch, TUBAF

Prof. Dr. Schwarze, TUBAF

Date of the award: July 3rd, 2019

Table of contents

Chapter 1 Introduction	1
1.1. Introduction	1
1.2. Outline of the dissertation	2
Chapter 2: Theoretical background and definitions	4
2.1. Coal gasification	4
2.1.1. Definition	4
2.1.2. Kinetics of the gasification process.....	6
2.1.3. Experimental arrangements used in gasification kinetic studies	10
2.2. Particle characterization	12
2.2.1. Particle diameter.....	12
2.2.2. Particle density.....	13
2.2.3. Particle porosity	13
2.2.4. Particle surface area	13
2.3. Particle movement.....	13
2.4. Particle residence time distributions	16
2.5. Error estimations	18
Chapter 3 Literature review.....	20
3.1. Factors influencing char reactivity.....	20
3.1.1. Parameters related to the char composition and structure.....	20
3.1.2. Parameters related to the process conditions.....	23
3.1.3. Parameters related to the experimental arrangement and data evaluation methods	24
3.2. Particle physical characterization	30
3.3. Velocity and residence time determination using radioactive tracers.....	33
3.4. Selected CFD gasification studies.....	34
3.5. Chapter summary.....	35
Chapter 4 Experimental	37
4.1. Experimental arrangement.....	37
4.1.1. The KIVAN reactor.....	37
4.1.2. KIVAN thermal characterization	41
4.1.3. Experimental arrangements for the determination of the particle velocity	45
4.2. Feedstock and other materials	48
4.2.1. Char characterization.....	48

4.2.2. Radioisotopes and tracer	50
4.3. Experimental procedures.....	51
4.3.1. Gasification experiments	51
4.3.2. Experimental determination of the particle velocity in KIVAN using radioactive tracers	53
Chapter 5 Experimental results, evaluation and discussion	58
5.1. Gas composition along the reaction tube.....	58
5.2. Gas characterization	60
5.3. Carbon conversion	61
5.4. Particle characterization as a function of carbon conversion.....	63
5.4.1. Particle size distribution.....	64
5.4.2. Density	65
5.4.3. Porosity	66
5.4.4. Total pore volume.....	66
5.4.5. Pore size distribution	67
5.4.6. Specific surface area	69
5.4.7. Summary of the data on particle characterization as a function of carbon conversion.....	70
5.5. Residence time and particle velocity	70
5.5.1. Theoretical calculation of the particle velocity.....	71
5.5.2. Experimental determination of the particle velocity (tests using ⁹⁹ Tc)	74
5.5.3. Comparison between theoretical and experimentally determined particle velocities at reacting conditions	85
5.5.4. Extrapolation of the results of the tests using ⁹⁹ Tc to the gasification conditions	88
5.6. HOK® char gasification experiments.....	90
5.6.1. HOK® kinetic characterization.....	90
5.6.2. Comparison between HOK® gasification kinetics calculated based on theoretically and experimentally determined particle velocities.....	96
5.7. Particle energy balance.....	99
Chapter 6 Conclusions and recommendations.....	102
6.1. Conclusions	102
6.2. Recommendations	104
Appendix.....	106
Appendix A: Compilation of correlations for the estimation of the drag coefficient.....	106
Appendix B: HOK® commercial specifications (2013).....	108
Appendix C: Temperatures measured in KIVAN during operation.....	109

Appendix D: Measured gas concentrations in the kinetic evaluation experiments	112
Appendix E: Analysis of the temperature changes during the test start-up	118
