# Contents

<b>1</b>	<b>Introduction</b>	<b>5</b>
1.1	Methods	5
1.1.1	Density matrix formalism	5
1.1.2	Linear response theory	7
1.1.3	Bogoliubov transformation	10
1.2	Closed quantum systems	12
1.2.1	Integrability	13
1.2.2	The XXZ model	15
1.2.3	Thermalization	17
1.2.4	Thermalization in quantum systems	19
1.2.5	Generalized thermalization in quantum systems	21
1.3	Open quantum system	24
1.3.1	Markovian master equation	26
1.3.2	Floquet theory	28
1.4	Phase transitions	30
1.4.1	Equilibrium phase transitions	30
1.4.2	Non-equilibrium phase transitions	33
1.5	Numerical methods	34
1.5.1	Exact diagonalization	34
1.5.2	Numerical integration of stochastic differential equations	37
<b>2</b>	<b>Perturbative approach to weakly driven many-particle systems</b>	<b>39</b>
2.1	The model	39
2.2	Zeroth order: Generalized Gibbs ensemble	41
2.2.1	Periodic driving	43
2.2.2	Projection operators and effective forces	43
2.3	Perturbation theory	45
2.3.1	Markovian perturbation	45
2.3.2	Missing conservation laws	48
2.3.3	Unitary perturbation	51

2.4	Applications . . . . .	53
2.4.1	Open Boltzmann equation . . . . .	53
2.4.2	Lindblad dynamics of fermions . . . . .	59
<b>3</b>	<b>Time-dependent generalized Gibbs ensembles</b>	<b>61</b>
3.1	Numerical verification of the GGE in the steady state . . . . .	62
3.2	Time evolution of weakly open quantum systems . . . . .	64
3.2.1	Time-dependent GGE . . . . .	64
3.2.2	Time-dependent block-diagonal density matrix . . . . .	65
3.3	Lindblad dynamics I . . . . .	66
3.4	Lindblad dynamic II: High temperature expansion . . . . .	73
<b>4</b>	<b>Pumping approximately integrable systems</b>	<b>79</b>
4.1	The model . . . . .	80
4.2	Steady state . . . . .	83
4.2.1	Truncated GGE . . . . .	84
4.2.2	Block-diagonal ansatz . . . . .	87
4.3	Results . . . . .	88
4.4	Further experimental setups . . . . .	93
4.4.1	Detection of GGEs in solids . . . . .	93
4.4.2	Detection of GGEs in trapped ion systems . . . . .	95
<b>5</b>	<b>Generalized hydrodynamics and phase transitions in open quantum systems</b>	<b>101</b>
5.1	Space-dependent Lagrange parameters . . . . .	103
5.1.1	Homogeneous expansion point . . . . .	104
5.1.2	Gradient expansion . . . . .	105
5.2	Transitions in weakly open spin chains . . . . .	107
5.2.1	Symmetric potential . . . . .	107
5.2.2	Asymmetric potential . . . . .	110
<b>6</b>	<b>Stability of long range order in a driven <math>O(3)</math> Heisenberg chain</b>	<b>113</b>
6.1	Introduction . . . . .	113
6.1.1	Motivation . . . . .	113
6.1.2	Mermin-Wagner theorem . . . . .	114
6.1.3	Spin wave theory in equilibrium . . . . .	115
6.1.4	Flocking . . . . .	118
6.2	Spin current and long range order . . . . .	119
6.2.1	The model . . . . .	119
6.2.2	Floquet spin wave theory . . . . .	121
6.2.3	Floquet-Boltzmann equation . . . . .	123

---

6.2.4	Classical simulation . . . . .	129
6.3	Field theoretical approach and stability analysis . . . . .	136
6.3.1	Haldane mapping . . . . .	136
6.3.2	Stability analysis . . . . .	138
<b>7</b>	<b>Conclusion and Outlook</b>	<b>143</b>
	<b>Bibliography</b>	<b>145</b>
	<b>Appendix A Zeroth order expansion point</b>	<b>153</b>
	<b>Appendix B Thermal state of the weakly open spin chain in the Ising limit</b>	<b>155</b>
	<b>Appendix C Phase transitions in weakly open spin chains</b>	<b>157</b>
	<b>Appendix D Equations of motion of the two continuum fields <math>m</math> and <math>\phi</math></b>	<b>161</b>
	<b>Appendix E Dedication and Declaration</b>	<b>163</b>
E.1	Dedication . . . . .	163
E.2	Declaration . . . . .	164
E.3	Teilpublikationen . . . . .	164
