

Louis de Broglie

Research on the Theory of Quanta

With a Foreword by Hirokazu Nishimura

Translated by André Michaud and Fritz Lewertoff

Edited by Vesselin Petkov

CONTENTS

Preface by the Editor	i
Foreword by Hirokazu Nishimura	iii
Preface by Louis de Broglie	ix
Summary	1
Historical Introduction	3
I. From the 16th to the 20th Century.	3
II. The 20th century: Relativity and Quanta	5
1 The Phase Wave	11
I. The Relation between Quantum and Relativity	11
II. Phase Velocity and Group Velocity	17
III. The Phase Wave in Space-Time	19
2 Principle of Maupertuis and Principle of Fermat	27
I. Purpose of this Chapter	27
II. The Two Principles of Least Action in Classical Dynamics	29
III. The Two Principles of Least Action in the Dynamics of the Electron	31
IV. Wave Propagation; Fermat Principle	35
V. Extension of the Quantum Relation	37
VI. Specific Cases; Discussions	39

3	The Quantum Conditions of Trajectory Stability	49
	I. The Bohr-Sommerfeld Stability Conditions	49
	II. Interpretation of Einstein's Condition	51
	III. Sommerfeld Conditions for Quasi-Periodic Motions	52
4	Quantification of the Simultaneous Motions of two Electrical Centers	57
	I. Difficulties Raised by this Issue	57
	II. The Drag of the Nucleus in the Hydrogen Atom	58
	III. The two Phase Waves of the Nucleus and the Electron	61
5	The Quanta of Light	65
	I. The Atom of Light	65
	II. The Motion of the Atom of Light	69
	III. Some Agreements between the Opposing Radiation Theories	70
	IV. Wave Optics and Light Quanta	75
	V. Interferences and Coherence	76
	VI. The Bohr Frequency Law. Conclusions	78
6	The Scattering of X- and γ-rays	81
	I. The Theory of J. J. Thomson	81
	II. The Theory of Debye	84
	III. The Recent Theory of P. Debye and A. H. Compton .	86
	IV. Scattering by Moving Electrons	90
7	Statistical Mechanics and Quanta	95
	II. Reminder of Some Results of Statistical Thermodynamics	95
	II. New Conception of the Statistical Equilibrium of a Gas	100
	III. The Gas of Light Atoms	105
	IV. Energy Fluctuations in the Black Body Radiation . . .	110
Appendix to Chapter 5		
	On Light Quanta	113
	Summary and Conclusions	116

THE WAVE NATURE OF THE ELECTRON

Louis de Broglie's Nobel Lecture, December 12, 1929 119
