Herausgegeben vom Rektor der TU Bergakademie Freiberg

B 392 Werkstofftechnologie

**Thermophysical properties of molten
TRIP/TWIP steel alloys**

Iurii Korobeinikov

Table of content

1. Introduction	1
2. Literature review	2
2.1. TRIP/TWIP steels. History, development applications	2
2.2. Review of existing thermophysical properties data for iron and TRIP/TWIP steels	7
2.3. Review of experimental methods to investigate density and surface tension of steel and Fe-Alloys	15
2.4. Research hypothesis	22
3. Experimental	23
3.1. Surface tension	23
3.2. Development and calibration of the density measurement equipment	31
4. Results and discussion	38
4.1. Density of the reference metals	38
4.2. Density of the TRIP steels measured with the MBP method	43
4.3. Density of the TRIP steels measured with the Archimedean method	46
4.4. Surface tension of the Cr-Mn-Ni steels 15NC10.15 and 19NC15.15	49
4.5. Effect of boron on the surface tension of liquid iron and steel	51
4.6. Effect of nitrogen on the surface tension of liquid TRIP steel	58
4.7. Effect of thermophysical properties on the inert gas atomization of liquid steels	60
5. Conclusions	68
6. List of references	70
7. Appendix	75
