

Michael Springborg, Meijuan Zhou

Quantum Chemistry

An Introduction

DE GRUYTER

Contents

Introduction — V

1	What is quantum theory? — 1
1.1	Classical physics — 1
1.2	Black-body radiation — 1
1.3	Heat capacities of solids — 4
1.4	Photoelectric effect — 6
1.5	The double-slit experiment — 7
1.6	Compton diffraction — 8
1.7	Wave-particle duality — 9
1.8	Spectra — 10
1.9	Problems with answers — 10
1.10	Problems — 13
2	Basics of quantum theory — 14
2.1	The time-dependent Schrödinger equation — 14
2.2	The time-independent Schrödinger equation — 15
2.3	The wave function — 18
2.4	Heisenberg's uncertainty principle — 20
2.5	More particles — 21
2.6	Problems with answers — 22
2.7	Problems — 24
3	Operators and quantum theory — 26
3.1	Operators — 26
3.2	Expectation value — 28
3.3	An example — 29
3.4	Eigenvalues and eigenfunctions — 30
3.5	Hermitian operators — 31
3.6	Commuting operators — 33
3.7	The postulates of quantum theory — 35
3.8	Position and momentum representation — 37
3.9	Observables — 39
3.10	Problems with answers — 41
3.11	Problems — 44
4	Particle in a box — 46
4.1	The Schrödinger equation and its solutions — 46
4.2	Time-dependent solutions — 48
4.3	Expectation values — 50

4.4	Complete set of functions — 52
4.5	Kinetic energy — 53
4.6	Momentum representation — 54
4.7	Experimental realizations: conjugated molecules — 55
4.8	Experimental realizations: chains of metal atoms — 58
4.9	A model of chemical bonds — 60
4.10	More particles — 62
4.11	More dimensions — 63
4.12	Problems with answers — 66
4.13	Problems — 70
5	More or less free particles — 72
5.1	Free particle in one dimension — 72
5.2	Steps — 74
5.3	Tunnel effect — 76
5.4	Scanning tunneling microscope — 82
5.5	Chemical reactions — 83
5.6	Problems with answers — 85
5.7	Problems — 88
6	Vibrations — 89
6.1	Energy of molecular systems — 89
6.2	Vibrations of a molecule — 90
6.3	Harmonic oscillator — 91
6.4	Momentum representation — 94
6.5	Morse oscillator — 96
6.6	Relevance to experiment — 98
6.7	Problems with answers — 98
6.8	Problems — 103
7	Rotations — 105
7.1	Angular momentum and moment of inertia — 105
7.2	2D rotor — 107
7.3	3D rotor — 110
7.4	Addition of angular momenta — 120
7.5	Spin of the electron — 121
7.6	Relevance for experiment — 124
7.7	Problems with answers — 127
7.8	Problems — 128
8	The hydrogen atom — 130
8.1	Experimental findings — 130

8.2	Bohr's model for the hydrogen atom — 130
8.3	\hat{H} for H — 133
8.4	\hat{H} for e^- — 135
8.5	Other centro-symmetric systems — 144
8.6	Angular momentum — 145
8.7	Problems with answers — 148
8.8	Problems — 148
9	Foundations of the approximate methods — 150
9.1	The problem — 150
9.2	Variational principle — 151
9.3	Variation method—an example — 152
9.4	Variational method—general — 154
9.5	Rayleigh–Ritz variational procedure—general — 155
9.6	Rayleigh–Ritz variation method—an example — 159
9.7	Time-independent perturbation theory — 161
9.8	Time-dependent perturbation theory — 162
9.9	Problems with answers — 164
9.10	Problems — 173
10	The orbital model — 174
10.1	Structure and orbitals — 174
10.2	The Schrödinger equation for a molecule — 174
10.3	Born–Oppenheimer approximation — 177
10.4	An example — 179
10.5	Spin-orbitals — 181
10.6	Hartree approximation — 182
10.7	Hartree–Fock approximation — 185
10.8	RHF and UHF — 189
10.9	Bye bye, orbital picture? — 191
10.10	Hartree–Fock–Roothaan method — 194
10.11	The orbital picture and atomic interactions — 195
10.12	How many orbitals are needed? — 196
10.13	Problems — 197
11	Atoms — 198
11.1	He — 198
11.2	The periodic table — 200
11.3	Angular momentum — 201
11.4	Spin-orbit coupling — 205
11.5	Couplings, term symbols, and good quantum numbers — 207

11.6	On the spatial distribution and the energies of the atomic orbitals — 209
11.7	Spherical atoms — 211
11.8	Problems with answers — 213
11.9	Problems — 214
12	The smallest molecules — 215
12.1	The problem — 215
12.2	H_2^+ molecular ion — 215
12.3	HeH^{2+} — 219
12.4	H_2 : the LCAO-MO picture — 221
12.5	H_2 : the VB picture — 223
12.6	H_2 : correlation — 223
12.7	H_2 : energy contributions — 226
12.8	Problems — 227
13	Other diatomic molecules — 228
13.1	A simple model for an AB molecule — 228
13.2	He_2 — 233
13.3	HeH — 234
13.4	Other diatomic molecules — 235
13.5	Problems with answers — 243
13.6	Problems — 245
14	Larger systems: methods — 246
14.1	Hartree-Fock-Roothaan method — 246
14.2	Basis sets — 249
14.3	Semiempirical and ab initio methods — 254
14.4	Hückel theory — 255
14.5	Correlation — 259
14.6	CI and CC — 261
14.7	MCSCF and CASSCF — 263
14.8	MP — 265
14.9	DFT — 268
14.10	Crystals — 271
14.11	Electronic excitations — 274
14.12	Solvent effects — 279
14.13	Macromolecules and enzymes — 281
14.14	Electromagnetic fields — 283
14.15	Experimental quantities — 284
14.16	Problems with answers — 285
14.17	Problems — 290

15	Larger systems: applications — 292
15.1	Introduction — 292
15.2	Structure — 295
15.3	Vibrations — 300
15.4	Total and relative energies — 302
15.5	Dipole moment — 309
15.6	Electron densities — 311
15.7	Atomic charges — 313
15.8	Electrostatic potential — 316
15.9	Orbitals — 316
15.10	Orbital energies — 319
15.11	Problems with answers — 321
15.12	Problems — 322
16	Supporting information — 324
16.1	Continuous probability distributions — 324
16.2	Dirac's δ function — 326
16.3	Diagonalization — 327
16.4	Boltzmann, Fermi–Dirac, and Bose–Einstein distributions — 329
17	Mathematical formulas — 331
17.1	Trigonometric functions — 331
17.2	Spherical coordinates — 331
17.3	Laplace operator — 332
17.4	Integrals — 332
Index	— 335
