Preface to the Second Edition *page* xi
Preface to the First Edition xii
Acknowledgments xv
Useful General Formulas and Notation, Conventions, Abbreviations xvi

Introduction **1**
References for the Introduction 7

Part I Before Supersymmetry **9**

1 Phases of Gauge Theories **11**
1.1 Spontaneous Symmetry Breaking 12
1.2 Spontaneous Breaking of Gauge Symmetries 19
1.3 Phases of Yang–Mills Theories 26
1.4 Appendix: Basics of Conformal Invariance 35
References for Chapter 1 38

2 Kinks and Domain Walls **40**
2.1 Kinks and Domain Walls (at the Classical Level) 41
2.2 Higher Discrete Symmetries and Wall Junctions 56
2.3 Domain Walls Antigravitate 67
2.4 Quantization of Solitons (Kink Mass at One Loop) 73
2.5 Charge Fractionalization 81
References for Chapter 2 88

3 Vortices and Flux Tubes (Strings) **90**
3.1 Vortices and Strings 91
3.2 Non-Abelian Vortices or Strings 99
3.3 Fermion Zero Modes 109
3.4 String-Induced Gravity 115
3.5 Appendix: Calculation of the Orientational Part of the World-Sheet Action for Non-Abelian Strings 118
3.6 Appendix: Two-String Junctions and Z Strings in SM 120
References for Chapter 3 124

4 Monopoles and Skyrmions **126**
4.1 Magnetic Monopoles 127
4.2 Skyrmions 150

4.3 Appendix: Elements of Group Theory for SU(N) 169
References for Chapter 4 171

5 Instantons 173
5.1 Tunneling in Non-Abelian Yang–Mills Theory 174
5.2 Euclidean Formulation of QCD 182
5.3 BPST Instantons: General Properties 185
5.4 Explicit Form of the BPST Instanton 189
5.5 Applications: Baryon Number Nonconservation at High Energy 222
5.6 Instantons at High Energies 229
5.7 Other Ideas Concerning Baryon Number Violation 238
5.8 Appendices 240
References for Chapter 5 244

6 Isotropic (Anti)ferromagnet: O(3) Sigma Model and Extensions, Including CP($N-1$) 248
6.1 O(3) Sigma Model 249
6.2 Extensions: CP($N-1$) Models 252
6.3 Asymptotic Freedom in the O(3) Sigma Model 257
6.4 Instantons in CP(1) 266
6.5 The Goldstone Theorem in Two Dimensions 269
References for Chapter 6 273

7 False-Vacuum Decay and Related Topics 275
7.1 False-Vacuum Decay 276
7.2 False-Vacuum Decay: Applications 284
References for Chapter 7 297

8 Chiral and Other Anomalies 298
8.1 Chiral Anomaly in the Schwinger Model 299
8.2 Anomalies in QCD and Similar Non-Abelian Gauge Theories 316
8.3 't Hooft Matching and Its Physical Implications 324
8.4 Scale Anomaly 327
8.5 One-Form Anomalies 328
References for Chapter 8 335

9 Confinement in 4D Gauge Theories and Models in Lower Dimensions 336
9.1 Confinement in Non-Abelian Gauge Theories: Dual Meissner Effect 337
9.2 The 't Hooft Limit and $1/N$ Expansion 339
9.3 Abelian Higgs Model in 1 + 1 Dimensions 362
9.4 CP($N-1$) at Large N 367
9.5 The 't Hooft Model 374
9.6 Schwinger Model 388
9.7 Polyakov's Confinement in 2 + 1 Dimensions 393
9.8 Appendix: Solving the O(N) Model at Large N 404
References for Chapter 9 410

Part II Introduction to Supersymmetry 415

10 Basics of Supersymmetry with Emphasis on Gauge Theories 417
10.1 Introduction 418
10.2 Spinors and Spinorial Notation 420
10.3 The Coleman–Mandula Theorem 427
10.4 Superextension of the Poincaré Algebra 429
10.5 Superspace and Superfields 436
10.6 Superinvariant Actions 441
10.7 R Symmetries 458
10.8 Nonrenormalization Theorem for F Terms 459
10.9 Super-Higgs Mechanism 463
10.10 Spontaneous Breaking of Supersymmetry 467
10.11 Goldstinos 470
10.12 Digression: Two-Dimensional Supersymmetry 472
10.13 Supersymmetric Yang–Mills Theories 484
10.14 Supersymmetric Gluodynamics 488
10.15 One-Flavor Supersymmetric QCD 491
10.16 Hypercurrent and Anomalies 496
10.17 R Parity 511
10.18 Extended Supersymmetries in Four Dimensions 512
10.19 Instantons in Supersymmetric Yang–Mills Theories 520
10.20 Affleck–Dine–Seiberg Superpotential 542
10.21 Novikov–Shifman–Vainshtein–Zakharov β Function 544
10.22 The Witten Index 547
10.23 Q-Closed and Q-Exact Operators 551
10.24 Soft versus Hard Explicit Violations of Supersymmetry 553
10.25 Central Charges 556
10.26 Long versus Short Supermultiplets 561
10.27 Appendices 562
References for Chapter 10 570

11 Supersymmetric Solitons 575
11.1 Central Charges in Superalgebras 576
11.2 $\mathcal{N} = 1$: Supersymmetric Kinks 582
11.3 $\mathcal{N} = 2$: Kinks in Two-Dimensional Supersymmetric CP(1) Model 596
11.4 Domain Walls 607
11.5 Vortices in $D = 3$ and Flux Tubes in $D = 4$ 616
11.6 Critical Monopoles 625
References for Chapter 11 629

Part III Solutions to Exercises 633

Chapter 1 635

Chapter 2 638

Chapter 3 650

Chapter 4 **653**
Chapter 5 **661**
Chapter 6 **669**
Chapter 7 **680**
Chapter 8 **682**
Chapter 9 **688**
Chapter 10 **691**
Chapter 11 **710**
Index 712
