

ASM Handbook®

Volume 11 Failure Analysis and Prevention

Prepared under the direction of the
ASM International Handbook Committee

Volume Editors

Brett A. Miller, IMR Test Labs
Roch J. Shipley, Professional Analysis and Consulting, Inc.
Ronald J. Parrington, Engineering Systems Inc. (ESi)
Daniel P. Dennies, DMS, Inc.

Division Editors

Debbie Aliya, Aliya Analytical
Susan Freeman, Millennium Metallurgy, Ltd.
Larry D. Hanke, Materials Evaluation and Engineering Inc.
Steven J. McDanel, NASA Kennedy Space Center
Ronald J. Parrington, Engineering Systems Inc. (ESi)
Bojan Podgornik, Institute of Metals and Technology
Aaron Tanzer, Element Materials Technology

ASM International Staff

Amy Nolan, Content Developer
Steven Lampman, Senior Content Developer
Rob Meyer, Content Developer
David Vargas, Content Developer
Susan Sellers, Content Developer
Madrid Tramble, Manager, Production
Jennifer Kelly, Production Coordinator
Vince Katona, Production Coordinator
Karen Marken, Senior Managing Editor
Scott D. Henry, Senior Content Engineer

Editorial Assistance

Ed Kubel (deceased)
Elizabeth Marquard

Contents

Introduction to Failure Analysis and Prevention	1	Evaluation of Ceramic Materials in Failure Analysis	78
Introduction to Failure Analysis and Prevention		Nondestructive Evaluation Applications for Failure Analysis	
<i>Roch J. Shipley, Professional Analysis and Consulting, Inc., Brett A. Miller, IMR Test Labs, Ronald J. Parrington, Engineering Systems Inc.</i>	3	<i>Bence Bartha, NASA Kennedy Space Center</i>	80
Failure Definitions	3	Overview	80
Concepts of Failure Analysis and Prevention	4	Inspection Methods	80
Primary Physical Root Causes of Failure	6	Part Properties and History	81
Other Failure Analysis Tools	14	Characterizing Damage Modes and Crack Sizes	81
Categories of Failure	16	Nondestructive Evaluation Results Applied to Failure Analysis	82
Root-Cause Analysis	18	Bulk and Microscale Analysis	
Failure Prevention	20	<i>M. Clara Wright, NASA Kennedy Space Center</i>	85
Practice of Failure Analysis		Bulk Chemical Analysis	85
<i>Debbie Aliya, Aliya Analytical</i>		Microscale Chemical Analysis	87
<i>Aaron Tanzer, Element Materials Technology</i>		Chemical Analysis of Nonmetallics	89
<i>Steven J. McDanel, NASA/Kennedy Space Center</i>	25	Advances in Chemical Analysis Methods for Failure Analysis	90
The Failure Analysis Process—An Overview		Microfractography and Metallography for Failure Analysis	
<i>Debbie Aliya, Aliya Analytical</i>	27	<i>Frauke Hogue, Hogue Metallography</i>	92
Principles and Approaches in Failure Analysis Work	28	Selection and Cleaning of Samples	92
The Objectives of Failure Analysis	29	Damage Characterization of Metals	93
Scope and Planning	30	Mechanical Testing in Failure Analysis	
Planning and Preparation	31	<i>James F. Lane, Rimkus Consulting Group, Inc.</i>	
Practices and Procedures	33	<i>Daniel P. Dennies, DMS, Inc.</i>	105
How to Organize and Run a Failure Investigation		Mechanical Testing Definitions and Basics	105
<i>Daniel P. Dennies, DMS, Inc.</i>	36	Strength/Ductility Testing	107
What Is a Failure?	36	Stress Analysis and Fracture Mechanics	
Why Do Failures Happen?	37	<i>Julian Raphael, J R Technical Services, LLC</i>	
Why Is a Failure Investigation Performed?	37	<i>Roch J. Shipley, Professional Analysis and Consulting, Inc.</i>	
The Four-Step Problem-Solving Process	38	<i>John Landes, The University of Tennessee</i>	113
The Scientific Method and Failure Analysis—Intelligence, Imagination, and Creativity	38	Analysis of Applied Stresses	114
Critical Thinking	38	Fundamentals of Stress Analysis	114
Why Plan a Failure Investigation?	38	Stress Analysis of Common Geometries	121
Timeline of a Failure Analysis	38	Application of Stress Analysis	126
Nine Steps of a Failure Investigation	40	Fracture Mechanics	129
Failure Investigation Pitfalls	47	Probabilistic Aspects of Fatigue and Fracture	136
Other Tools	48	Crack-Growth Simulation	136
Determination and Classification of Damage		Appendix—Stress Tensor Decomposition and Transformation of Stress	137
<i>Aaron Tanzer, Element Materials Technology</i>	52	Finite Element Modeling in Failure Analysis	
Characterization and Identification of Damage and Damage Mechanisms	52	<i>Revised by Sangjoon Sohn, Engineering Systems Inc.</i>	140
Understanding Relationships between Damage Cause(s), Mechanism(s), and Mode(s)	55	Introduction	140
Damage Mechanism Categorization	56	General Development of Finite-Element Analysis	141
Examination of Damage and Material Evaluation	60	General-Purpose Applications	142
Visual or Macroscopic Examination of Damaged Material	60	Special-Purpose Applications	145
Interpretation of Damage and Fracture Features	61	Design Review in Failure Analysis	146
Corrosion and Wear Damage Features	64	Case Studies of Finite-Element Analysis in Failure Analysis	147
Analysis of Base Material Composition	67	Modeling and Accident Reconstruction	
Metallurgical Samples and Hardness	68	<i>Daniel M. Stange, Engineering Systems Inc.</i>	151
Preparation and Examination of Metallographic Specimens in Failure Analysis	71	Accident Reconstruction	151
Analysis and Interpretation of Microstructures	72	Modeling	157
Evaluation of Polymers in Failure Analysis	77	Data Review, Conclusions, and Report Preparation	
		<i>Steven J. McDanel, NASA Kennedy Space Center</i>	161
		Reviewing Data and Formulating Conclusions	161
		Failure Analysis Report Preparation and Writing	162
		Follow-Up on Recommendations	164

Tools and Techniques in Failure Analysis	
<i>Larry D. Hanke, Materials Evaluation and Engineering Inc.</i>	165
Visual Examination and Photography in Failure Analysis	
<i>Richard H. McSwain, McSwain Engineering, Inc.</i>	167
Field Photographic Documentation	167
Laboratory Photographic Documentation	168
Professional Digital Cameras	168
Photographic Lighting	170
Microscopic Photography	172
Special Methods	175
Nondestructive Testing in Failure Analysis	
<i>S. Lampman, ASM International</i>	
<i>M. Mulherin, Engineering Systems Inc.</i>	
<i>R. Shipley, Professional Analysis and Consulting, Inc.</i>	177
Probability of Detection	177
Visual Examination and Optical Scanning	180
Magnetic-Particle Inspection	182
Liquid Penetrant Inspection	183
Eddy-Current Inspection	183
Ultrasonic Inspection	184
Radiographic Techniques	186
Radiography	190
Computed Tomography	193
Quantitative Chemical Analysis of Metals in Failure Analysis	
<i>Burak Akyuz and Don McKay, Applied Technical Services, Inc.</i>	197
Optical Emission Spectroscopy	197
Inductively Coupled Plasma Optical Emission Spectroscopy	198
Combustion Analysis—Carbon and Sulfur	199
Inert Gas Fusion Analysis	199
X-Ray Spectroscopy	199
Ion Chromatography	199
Metallographic Techniques in Failure Analysis	
<i>George F. Vander Voort, Vander Voort Consulting L.L.C.</i>	200
Metallographic Specimen Preparation	200
Sectioning	200
Mounting	201
Edge Preservation	203
Grinding	203
Polishing	204
Electrolytic Polishing	207
Field Metallography	207
Examination of Microstructures	208
Fracture Profile Sections	208
Manufacturing Related Failures	215
Heat-Treatment-Related Failures	215
Fabrication-/Machining-Related Failures	215
Service Failures	218
Rolling-Contact Fatigue	218
X-Ray Diffraction Residual-Stress Measurement in Failure Analysis	
<i>J.A. Pineault, M. Belassel, and M.E. Brauss, Proto Manufacturing Ltd.</i>	221
Residual Stress in Failures and X-Ray Diffraction Analysis	221
X-Ray Diffraction Theory and Residual-Stress Measurement	221
Analysis of X-Ray Diffraction Data	222
Instrument Calibration and Validation of Stress Measurements	223
Sample Selection	225
Measurement Location Selection and Location Access	226
Selecting Measurement Directions and Depths	227
Specimen Preparation	227
Residual-Stress Effects on Components under Quasi-Static Loading	227
Stress-Corrosion Cracking and Corrosion Fatigue	228
Importance of Residual Stress in Fatigue	228
Effect of Manufacturing Processes on Residual Stress	232
Characterization of Stress Gradients Using X-Ray Diffraction	232
Effects of Heat Treatment on Residual Stresses	233
X-Ray Diffraction Stress Measurements in Multiphase Materials and Composites	234
X-Ray Diffraction Stress Measurements in Locations of Stress Concentration	235
X-Ray Diffraction Stress Measurements on Components Fabricated Using Additive Manufacturing	235
X-Ray Diffraction Stress Measurements of Enhanced Surface Treatments	236
Scanning Electron Microscopy for Failure Analysis	
<i>L. Scott Chumbley, Iowa State University</i>	
<i>Larry D. Hanke, Materials Evaluation and Engineering, Inc.</i>	240
Development of Scanning Electron Microscope Technology	240
Operation	241
Specimen Preparation	245
Application of Scanning Electron Microscope in Fractography	246
X-Ray Spectroscopy in Failure Analysis	
<i>L.S. Chumbley, Iowa State University</i>	
<i>Larry D. Hanke, Materials Evaluation and Engineering, Inc.</i>	251
Basis of the X-Ray Signal	251
Detectors for X-Ray Spectroscopy	251
Specimen Preparation and Data Collection	253
Application of X-Ray Spectroscopy in Failure Analysis	255
Chemical Characterization of Surfaces	
<i>Lisa Swartz and John Newman, Physical Electronics</i>	259
What is Surface Analysis?	259
Auger Electron Spectroscopy	260
X-Ray Photoelectron Spectroscopy	262
Time-of-Flight Secondary Ion Mass Spectrometry	264
Surface Analysis of Select Materials by Each Technique	266
Fatigue and Fracture	
<i>Ronald J. Parrington, Engineering Systems Inc. (ESi)</i>	271
Fracture Appearance and Mechanisms of Deformation and Fracture	
<i>M.E. Stevenson, P.D. Umberger, and S.F. Uchneat, Engineering Systems Inc. (ESi)</i>	273
Fracture Surface Information	274
Ductile and Brittle Behavior	277
Macroscopic Ductile and Brittle Fracture Surfaces	279
Structure and Behavior	280
Deformation and Fracture	281
Brittle Transgranular Fracture (Cleavage)	285
Intergranular Fracture	287
Fatigue Fracture	290
Environmentally Affected Fractures	295
Appendix 1—Case Study: Determination of Plastic Strain from Three-Dimensional Scanning	297
Appendix 2—Modeling with Fracture Mechanics	298
Mechanisms and Appearances of Ductile and Brittle Fracture in Metals	
<i>Dennis McGarry, SEA Ltd.</i>	304
Mechanisms of Deformation and Fracture	304
Ductile Fracture and Microvoid Coalescence	307
Factors Affecting Ductility	313

Fracture Appearances	315	Experimental Techniques to Promote Thermomechanical Fatigue Damage Mechanisms and Elucidate Mechanism Coupling Interactions.	447
Fracture at or near Stress Raisers	327	Life Modeling in Thermomechanical Fatigue Conditions.	448
Appendix—Modeling of Ductile Plastic Flow	335	Practical Application of Thermomechanical Fatigue Life Prediction	450
Fatigue Fracture Appearances		Environmental and Corrosion-Related Failures	
<i>Ronald J. Parrington, Engineering Systems Inc. (ESi).</i>	343	<i>Susan Freeman, Millennium Metallurgy, Ltd.</i>	457
Fatigue Processes	343	Analysis and Prevention of Environmental- and Corrosion-Related Failures	
Macroscopic Appearance of Fatigue Fracture.	344	<i>Fahmida Hossain and Veda-Anne Ulčickas, Massachusetts Materials Research</i>	459
Microscopic Appearance of Fatigue Fracture in Metals.	350	Electrochemical Nature of Corrosion	459
Fatigue of Polymers and Polymer-Matrix Composites.	354	Analysis of Environmental- and Corrosion-Related Failures	461
Intergranular Fracture		Typical Analysis Methodology.	461
<i>E.R. Weishaupt, Engineering Systems, Inc. (ESi)</i>	356	Laboratory Corrosion Testing.	464
Causes of Intergranular Fracture.	357	Environmental- and Corrosion-Related Failure Analysis	465
Mechanisms of Intergranular Fracture.	357	Prevention of Environmental- and Corrosion-Related Failures of Metals	470
Intergranular Brittle Cracking.	358	Prevention of Environmental- and Corrosion-Related Failures of Nonmetals	476
Dimpled Intergranular Fracture.	358	Forms of Corrosion	
Intergranular Fatigue.	359	<i>Michael Cooney and Richard Hoffman, R.A. Hoffmann Engineering, P.C.</i>	479
Hydrogen Embrittlement and Intergranular Stress-Corrosion Cracking	361	Galvanic Corrosion	479
Case History: Intergranular Fracture of Steam Generator Tubes.	363	Uniform Corrosion	486
Monotonic Overload and Embrittlement		Pitting and Crevice Corrosion	490
<i>Brett A. Miller, IMR Test Labs.</i>	366	Intergranular Corrosion	497
Fracture Modes and Mechanisms	366	Selective Leaching	505
Ductile Overload Failures	366	Velocity-Affected Corrosion	510
Brittle Overload Failures	369	Hydrogen Damage and Embrittlement	
Mixed-Mode Cracking	372	<i>Revised by Ockert J. Van Der Schijff, Noah Budiansky, and Ronald M. Latanision, Exponent Inc.</i>	518
Material Factors	372	Overview of Hydrogen Damage Processes.	518
Temperature Effects	377	Susceptibility of Various Metals.	525
Effects of Mechanical Loading.	379	Analysis of Hydrogen Embrittlement in Commodity-Grade Steels.	527
Service Damage or Alteration	381	Stress-Corrosion Cracking	
Embrittlement of Metallic Materials	382	<i>Lisa N. Eastep and Michael E. Casey, Failure Analysis & Prevention, Inc.</i>	533
Laboratory Fracture Examination	397	Terminology and Background	533
Fatigue Failures		General Characteristics of Stress-Corrosion Cracking	534
<i>Revised by Lothar Issler, University of Applied Sciences Esslingen (Germany)</i>	398	Development of Conditions for Stress-Corrosion Cracking	534
Fatigue Properties and Design Life.	398	Stages of Stress-Corrosion Cracking	538
Infinite-Life Criterion (<i>S-N</i> Curves)	398	Brief Overview of Proposed Stress-Corrosion Cracking Propagation Mechanisms	539
Finite-Life Criterion (ϵ - <i>N</i> Curves).	401	Diagnosing Stress-Corrosion Cracking	539
Damage Tolerance Criterion	402	Prevention and Mitigation	543
Characteristics of Fatigue Fractures	406	Specific Alloy-Environment Combinations.	543
Effect of Loading and Stress Distribution	411	Stress-Corrosion Cracking Case Studies	546
Effect of Material Condition	420	Liquid-Metal- and Solid-Metal-Induced Embrittlement	
Corrosion Fatigue	424	<i>Revised by Ockert J. Van Der Schijff, Noah Budiansky, and Ronald M. Latanision, Exponent, Inc.</i>	573
Contact Fatigue	425	Characteristics of Liquid-Metal- and Solid-Metal-Induced Embrittlement.	573
Thermal Fatigue	429	Occurrence of Liquid-Metal- and Solid-Metal-Induced Embrittlement.	574
Creep and Stress-Rupture Failures		Failure Analysis of Liquid-Metal- and Solid-Metal-Induced Embrittlement.	574
<i>Richard P. Baron, Engineering Systems, Inc.</i>	432	Liquid-Metal- and Solid-Metal-Induced Embrittlement Service Failures	575
Brief History	433		
Bulk Creep Behavior.	433		
Classical Creep Behavior.	434		
Nonclassical Creep Behavior	434		
Microstructural Changes during Classical Creep.	435		
Nondestructive Creep Damage Assessment of Metallic Materials	436		
Stress Rupture	437		
Stress-Rupture Fracture Characteristics	439		
Metallurgical Instabilities.	439		
Thermal Fatigue and Creep Fatigue	442		
Thermomechanical Fatigue—Mechanisms and Practical Life Analysis			
<i>Robert L. Amaro, Advanced Materials Testing & Technologies Stephen D. Antolovich, Georgia Institute of Technology and Washington State University Ashok Saxena, University of Arkansas.</i>	444		
Thermomechanical Fatigue Deformation and Damage Mechanisms	445		

High-Temperature Corrosion-Related Failures	
<i>David A. Shifler, Office of Naval Research</i>	
<i>Robert B. Pond, Jr., Loyola University Maryland</i>	581
High-Temperature Corrosion Mechanisms	581
Boiler Tube Degradation and Failures	585
Molten Salts and Energy Storage	590
Degradation and Failures in Gas Turbines in Marine Applications	592
Environmental Effects on Aero Gas Turbine Engines	598
Aging, Diffusion, and Interdiffusion Phenomena	604
High-Temperature Coatings that Improve Performance	605
Biological Corrosion Failures	
<i>Thomas R. Jack, University of Calgary</i>	615
The Scope of Microbial Activity	615
The Corrosion Process	615
Microbiologically Influenced Corrosion Mechanisms—Iron and Steel	616
Failure Analysis	620
A New Approach to Biological Failure Analysis	624
Industry Experience	625
Managing Microbiologically Influenced Corrosion	628
Conclusions	631
Wear Failures	
<i>Bojan Podgornik, Institute of Metals and Technology</i>	637
Fundamentals of Wear Failures	
<i>Giovanni Straffelini, University of Trento</i>	639
Wear Mechanisms and their Identification	640
Sliding Wear	643
Fretting Wear	644
Rolling-Sliding Wear	645
Abrasive Wear by Hard Particles	645
Solid-Particle Erosion Wear	646
Surface Treatments to Avoid Wear Failures	647
Abrasive Wear Failures	649
General Classification of Wear	650
Abrasive Wear Mechanisms	652
Wear Failure Analysis	657
Adhesive Wear Failures	
<i>Bojan Podgornik, Institute of Metals and Technology</i>	665
Mechanism of Adhesive Wear	665
Adhesive Wear Failure Modes	667
Testing and Evaluation of Adhesive Wear	671
Material-Dependent Adhesive Wear	677
Summary	678
Fretting Wear Failures	
<i>Siegfried Fouvry, Ecole Centrale de Lyon</i>	685
Fretting Wear	685
Examples of Fretting Failures	709
Rolling-Contact Fatigue	
<i>Bryan Allison, SKF Aeroengine North America</i>	716
Hertzian Contact	716
Bearing Life Prediction	717
Rolling-Contact Fatigue Testing	718
Physics of Rolling-Contact Fatigue	718
Bearing Materials	720
Surface-Initiated Fatigue	722
State of the Art	723
Impact Wear Failures	
<i>Roger Lewis, Mohanad Zalzal, and Tom Slatter, The University of Sheffield</i>	730
Impact Wear Modes	730
Impact Wear of Metals	730
Impact Wear of Ceramics	735
Impact Wear of Polymers	737
Impact Wear Testing	737
Impact Wear Modeling	737
Impact Wear Case Studies	738
Corrosive Wear Failures	
<i>D.Y. Li, University of Alberta</i>	745
Phenomena and Typical Forms of Corrosive Wear	745
Mechanisms for Corrosive Wear	746
Testing and Characterization of Corrosive Wear	747
Factors that Influence Corrosive Wear	749
General Guidelines for Materials Selection against Corrosive Wear	751
Erosive Wear Failures	
<i>Revised by Maksim Antonov, Tallinn University of Technology</i>	755
Erosion of Ductile Materials	756
Erosion of Brittle Materials	757
Erosion of Elastomers	757
Examples of Erosive Wear Failures	757
Materials Selection for Applications in Which Erosive Wear Failures Can Occur	760
Liquid Droplet Impingement Erosion	
<i>N. Fujisawa, Niigata University</i>	
<i>R. Morita, Central Research Institute of Electric Power Industry</i>	764
Fundamentals of Liquid Droplet Impingement	764
Initiation of Erosion	764
LDI Erosion Rate	765
Terminal-Stage Erosion Rate	765
Effect of Liquid Film	766
Surface Roughness	767
Prediction of Erosion Rate	768
Concluding Remarks	770
Distortion	
<i>Debbie Aliya, Aliya Analytical</i>	773
Analysis of Distortion and Deformation	775
Overloading	775
Inappropriate Specifications	778
Failure to Meet Specifications	780
Analyzing Distortion Failures	783
Special Types of Distortion Failure	784
Deformation Related to Other Types of Failure	785
Deformation by Design	786
Reference Information	787
Glossary of Terms—Failure Analysis and Prevention	
<i>Revised by:</i>	
<i>Brett A. Miller, IMR Test Labs</i>	
<i>Ronald J. Parrington, Engineering Systems Inc.</i>	
<i>Roch J. Shipley, Professional Analysis and Consulting, Inc.</i>	
<i>Daniel P. Dennies, DMS, Inc.</i>	789
