

Introduction to Modern Climate Change

THIRD EDITION

Andrew E. Dessler

Texas A&M University

Contents

Preface	<i>page xv</i>
Acknowledgments	xviii
1 An Introduction to the Climate Problem	1
1.1 What Is Climate?	1
1.2 What Is Climate Change?	4
1.3 A Coordinate System for the Earth	5
1.4 Why You Should Believe This Textbook	7
1.5 Chapter Summary	12
Additional Resources	13
Terms	14
Problems	14
2 Is the Climate Changing?	16
2.1 Temperature Anomalies	16
2.2 Recent Climate Change	18
2.3 Climate over the Earth's History	28
2.4 Chapter Summary	35
Additional Resources	36
Terms	36
Problems	37
3 Radiation and Energy Balance	39
3.1 Temperature and Energy	39
3.2 Electromagnetic Radiation	40
3.3 Blackbody Radiation	42
3.4 Energy Balance	47
3.5 Chapter Summary	49
Terms	50
Problems	50

4 A Simple Climate Model	53
4.1 The Source of Energy for Our Climate System	53
4.2 Energy Loss to Space	57
4.3 The Greenhouse Effect	58
4.4 Testing Our Theory with Other Planets	62
4.5 Chapter Summary	64
Terms	64
Problems	65
5 The Carbon Cycle	69
5.1 Greenhouse Gases and Our Atmosphere's Composition	69
5.2 Atmosphere–Land–Biosphere–Ocean Carbon Exchange	71
5.3 Atmosphere–Rock Exchange	76
5.4 How Are Humans Perturbing the Carbon Cycle?	78
5.5 Some Commonly Asked Questions about the Carbon Cycle	82
5.6 The Long-term Fate of Carbon Dioxide	84
5.7 Methane	86
5.8 Other Greenhouse Gases	87
5.9 Chapter Summary	88
Terms	89
Problems	90
6 Forcing, Feedbacks, and Climate Sensitivity	91
6.1 Time Lags in the Climate System	91
6.2 Radiative Forcing	93
6.3 Climate Sensitivity	101
6.4 Slow Feedbacks	105
6.5 Chapter Summary	107
Terms	108
Problems	109
7 Why Is the Climate Changing?	112
7.1 Context of the Recent Warming	112
7.2 The First Suspect: Plate Tectonics	112
7.3 The Sun	113
7.4 The Earth's Orbit	114
7.5 Unforced Variability	117
7.6 Greenhouse Gases	119

7.7 Putting It Together	125
7.8 Chapter Summary	126
Terms	127
Problems	127
8 Predictions of Future Climate Change	129
8.1 The Factors That Control Emissions	129
8.2 How These Factors Have Changed in the Past	133
8.3 Emissions Scenarios	135
8.4 Predictions of Future Climate	139
8.5 Is the Climate Predictable?	142
8.6 Chapter Summary	144
Terms	144
Problems	145
9 Impacts of Climate Change	146
9.1 Why Should You Care about Climate Change?	146
9.2 Physical Impacts	148
9.3 Impacts of These Changes	158
9.4 Abrupt Climate Changes	164
9.5 Putting It Together	165
9.6 Chapter Summary	166
Terms	167
Problems	167
10 Exponential Growth	168
10.1 What Is Exponential Growth?	168
10.2 The Rule of 72	169
10.3 Catastrophe Is Closer Than You Think	171
10.4 Discounting	175
10.5 Putting It Together: The Social Cost of Carbon	178
10.6 Chapter Summary	183
Terms	183
Problems	184
11 Fundamentals of Climate Change Policy	187
11.1 Adaptation	187
11.2 Mitigation	191

11.3	Solar Radiation Management	197
11.4	Carbon Dioxide Removal	199
11.5	Putting It Together	201
11.6	Chapter Summary	203
	Terms	203
	Problems	204
12	Mitigation Policies	205
12.1	The Economic Basis of Climate Change	205
12.2	Conventional Regulations	207
12.3	Market-based Regulations	208
12.4	Information and Voluntary Methods	216
12.5	Putting the Approaches Together	216
12.6	Chapter Summary	217
	Terms	218
	Problems	218
13	A Brief History of Climate Science and Politics	221
13.1	The Beginning of Climate Science	221
13.2	The Emergence of Environmentalism	223
13.3	The 1970s and 1980s: Ozone Depletion and Acid Rain	225
13.4	The 1970s and 1980s: The Ascent of Free Markets	228
13.5	Climate Science in the 1970s	229
13.6	The Year Everything Changed: 1988	230
13.7	The Framework Convention on Climate Change: The First Climate Treaty	231
13.8	The Kyoto Protocol	233
13.9	The George W. Bush Years: 2001–2009	234
13.10	The Obama Years: 2009–2017	235
13.11	The Paris Agreement	237
13.12	The Trump Years: 2017–2021	238
13.13	The Future: 2021 and Beyond	239
13.14	Chapter Summary	240
	Terms	241
	Problems	241
14	Putting It All Together: A Long-term Policy to Address Climate Change	243
14.1	Decisions Under Uncertainty: Should We Reduce Emissions?	243
14.2	Picking a Long-term Goal	245
14.3	Limiting Warming to 1.5°C or 2°C	249

14.4 A Few Final Thoughts	257
14.5 Chapter Summary	258
Terms	258
Problems	258
Solutions to Selected Quantitative Problems	260
References	264
Index	267
