

Extractive Metallurgy of **COPPER**

Sixth Edition

MARK E. SCHLESINGER

Missouri University of Science and Technology, Rolla, MO,
United States

KATHRYN C. SOLE

Sole Consulting, Johannesburg, Gauteng, South Africa; University
of Pretoria, Pretoria, Gauteng, South Africa

WILLIAM G. DAVENPORT

Emeritus Professor, Department of Materials Science and
Engineering, University of Arizona, Tuscon, AZ, United States

GERARDO R. F. ALVEAR FLORES

Adjunct Professor, University of Queensland, Brisbane, QLD,
Australia; Manager Technical Marketing, Rio Tinto Singapore
Holdings Pte Ltd., Singapore

CONTENTS

Preface to the sixth edition

xiii

1. Overview	1
1.1 Introduction	1
1.2 Ore—rock differentiation in the mine	2
1.3 Extracting copper from copper—iron—sulfide ores	5
1.4 Hydrometallurgical extraction of copper	11
1.5 Melting and casting cathode copper	14
1.6 Recycle of copper and copper alloy scrap	14
1.7 Safety	16
1.8 Environment	16
1.9 Summary	17
References	18
Suggested reading	18
Further reading	18
2. Production and use	19
2.1 Properties and uses of copper	19
2.2 Global copper production	21
2.3 Copper minerals, mines, and cut-off grades	22
2.4 Locations of processing plants	25
2.5 Price of copper	27
2.6 Future outlook	28
2.7 Summary	30
References	30
3. Production of high copper concentrates—comminution and flotation	31
3.1 Concentration flowsheet	31
3.2 The comminution process	33
3.3 Particle size control of flotation feed	42
3.4 Froth flotation fundamentals	46
3.5 Flotation chemicals	48
3.6 Flotation of Cu ores	52
3.7 Flotation cells	55

3.8	Flotation process control	59
3.9	Flotation product processing	62
3.10	Other flotation separations	63
3.11	Summary	63
	References	64
	Suggested reading	66
4.	Pyrometallurgical processing of copper concentrates	67
4.1	Fundamental thermodynamic aspects associated with pyrometallurgical copper processing	67
4.2	The Yazawa diagram and pyrometallurgical copper processing	69
4.3	Smelting: the first processing step	71
4.4	The copper converting process	83
4.5	The refining process	86
4.6	Minor elements	87
4.7	Summary	90
	References	91
	Suggested reading	93
5.	Theory to practice: pyrometallurgical industrial processes	95
5.1	General considerations	95
5.2	Technology evolution since 1970	96
5.3	Copper making technology classification	103
5.4	Evolution to large-scale smelting	108
5.5	Chinese technology developments since 2000	111
5.6	Summary	113
	References	113
	Suggested readings	117
6.	Flash smelting	119
6.1	Metso Outotec flash furnace	119
6.2	Peripheral equipment	127
6.3	Flash furnace operation	130
6.4	Control	131
6.5	Impurity behavior	133
6.6	Outotec flash smelting recent developments and future trends	134
6.7	Inco flash smelting	135
6.8	Inco flash furnace summary	138
6.9	Inco versus Outotec flash smelting	139
6.10	Summary	139
	References	139
	Further reading	141

7. Bath matte smelting processes	143
7.1 Submerged tuyere: Noranda and Teniente processes	144
7.2 Teniente smelting	151
7.3 Vanyukov submerged tuyere smelting	156
7.4 Top Submerged Lance	159
7.5 Chinese bath smelting technology developments: SKS-BBS process and side-blow smelting	171
7.6 Concluding remarks	179
References	181
Suggested reading	183
8. Converting of copper matte	185
8.1 Introduction	185
8.2 Technology options for batch and continuous copper converting	188
8.3 Batch converting	191
8.4 Industrial Peirce—Smith converting operations	197
8.5 Batch converting of high matte grades	205
8.6 Oxygen enrichment of Peirce—Smith converter blast	207
8.7 Maximizing converter productivity	208
8.8 Recent improvements in Peirce—Smith converting	210
8.9 Alternatives to Peirce—Smith converting	211
8.10 Top submerged lance converting	219
8.11 Chinese continuous converting technologies	221
8.12 Summary	224
References	225
Suggested reading	229
9. Continuous copper making processes	231
9.1 Single-stage process: direct to blister flash process	232
9.2 Two-stage process: Dongying-Fangyuan process	244
9.3 The Mitsubishi process: introduction	247
9.4 Other developments for continuous processing of copper	257
9.5 Summary	260
References	262
Suggested reading	264
Further reading	264
10. Copper loss in slag	265
10.1 Copper in slags	265
10.2 Decreasing copper in slag I: minimizing slag generation	267
10.3 Decreasing copper in slag II: minimizing Cu concentration in slag	268

10.4	Decreasing copper in slag III: pyrometallurgical slag settling/reduction	268
10.5	Decreasing copper in slag IV: slag minerals processing	274
10.6	Summary	277
	References	277
11.	Capture and fixation of sulfur	281
11.1	Off-gases from smelting and converting processes	281
11.2	Sulfuric acid manufacture	284
11.3	Smelter off-gas treatment	284
11.4	Gas drying	289
11.5	Acid plant chemical reactions	290
11.6	Industrial sulfuric acid manufacture	294
11.7	Alternative sulfuric acid manufacturing methods	303
11.8	Recent and future developments in sulfuric acid manufacture	305
11.9	Alternative sulfur products	307
11.10	Summary	308
	References	308
	Suggested reading	311
	Further reading	311
12.	Fire refining (S and O removal) and anode casting	313
12.1	Industrial methods of fire refining	313
12.2	Chemistry of fire refining	318
12.3	Choice of hydrocarbon for deoxidation	319
12.4	Minor metals removal	320
12.5	Casting anodes	322
12.6	Continuous anode casting	324
12.7	New anodes from rejects and anode scrap	326
12.8	Summary	326
	References	327
	Suggested reading	328
13.	Electrolytic refining	331
13.1	The electrolytic refining process	331
13.2	Chemistry of electrolytic refining and behavior of anode impurities	333
13.3	Equipment	337
13.4	Typical refining cycle	341
13.5	Electrolyte	342
13.6	Maximizing cathode copper purity	346
13.7	Minimizing energy consumption and maximizing current efficiency	348

13.8	Treatment of electrolyte bleed	349
13.9	Treatment of slimes	350
13.10	Industrial electrowinning	350
13.11	Recent developments and emerging trends in copper electrowinning	350
13.12	Summary	354
	References	355
	Suggested reading	359
14.	Hydrometallurgical copper extraction: introduction and leaching	361
14.1	Copper recovery by hydrometallurgical flowsheets	361
14.2	Chemistry of the leaching of copper minerals	362
14.3	Leaching methods	364
14.4	Heap leaching	366
14.5	Dump leaching	382
14.6	Vat leaching	383
14.7	Agitation leaching	386
14.8	Pressure oxidation leaching	391
14.9	In situ leaching	396
14.10	Hydrometallurgical processing of chalcopirite concentrates	396
14.11	Future developments	397
14.12	Summary	398
	References	401
	Suggested reading	406
15.	Solvent extraction	407
15.1	The solvent extraction process	407
15.2	Chemistry of copper solvent extraction	408
15.3	Composition of the organic phase	409
15.4	Equipment	412
15.5	Circuit configurations	414
15.6	Quantitative design of a series circuit	417
15.7	Quantitative comparison of series and series—parallel circuits	420
15.8	Minimizing impurity transfer and maximizing electrolyte purity	421
15.9	Operational considerations	424
15.10	Industrial solvent extraction plants	427
15.11	Safety in solvent extraction plants	427
15.12	Current and future developments	432
15.13	Summary	433
	References	433
	Suggested reading	436

16. Electrowinning	437
16.1 The electrowinning process	437
16.2 Chemistry of copper electrowinning	437
16.3 Electrical requirements	438
16.4 Equipment	439
16.5 Operational practice	443
16.6 Maximizing copper quality	451
16.7 Maximizing energy efficiency	453
16.8 Modern industrial electrowinning plants	454
16.9 Direct electrowinning from agitated leach solutions	455
16.10 Copper electrowinning in EMEW cells	459
16.11 Safety in electrowinning tankhouses	460
16.12 Future developments	460
16.13 Summary	461
References	461
Suggested reading	465
17. Collection and processing of recycled copper	467
17.1 The materials cycle	467
17.2 Secondary copper grades and definitions	470
17.3 Scrap processing and beneficiation	474
17.4 Summary	481
References	481
18. Chemical metallurgy of copper recycling	483
18.1 Characteristics of secondary copper	483
18.2 Scrap processing in primary copper smelters	484
18.3 The secondary copper smelter	485
18.4 Summary	489
References	490
19. Melting and casting	493
19.1 Product grades and quality	493
19.2 Melting technology	496
19.3 Casting machines	499
19.4 Summary	506
References	507
Suggested reading	509

20. Byproduct and waste streams	511
20.1 Molybdenite recovery and processing	511
20.2 Anode slimes	514
20.3 Dust treatment	517
20.4 Use or disposal of slag	519
20.5 Summary	521
References	521
21. Costs of copper production	525
21.1 Overall investment costs: mine through refinery	526
21.2 Overall direct operating costs: mine through refinery	528
21.3 Total production costs, selling prices, profitability	529
21.4 Concentrating costs	529
21.5 Smelting costs	530
21.6 Electrorefining costs	533
21.7 Production of copper from scrap	533
21.8 Leach/solvent extraction/electrowinning costs	534
21.9 Profitability	536
21.10 Summary	536
References	536
22. Toward a sustainable copper processing	539
22.1 Resource complexity and flowsheet solutions	539
22.2 Multimetal flowsheet integration	540
22.3 Concluding remarks	551
References	552
Suggested readings	553
